

PRODUCT QUESTIONS

My axe doesn't have a hole in the bottom of that, so if I want to use this bracket, should I make a hole my axe?

Yes, you must drill a hole in the boom of your axe. It's a very simple installation and your axe will be held perfectly secure.

I saw another accessory and someone asked if it locks, you said no and set a link to this one. How do you lock this so no one takes it?

Different accessories will have different functions. The Axe Bracket (RRAC023) is lockable! It has a machined hole through the axe handle mounting bolt that can lock the axe in place with a small cable lock.

Can the axe head part of the bracket be mounted so the axe blade is facing down?

Yes. You can mount the axe mount to have the axe blade down you will just have to make sure you have the correct clearance between the mount and the roof of the vehicle to do so.

Will this fit the Fiskars X25 Splitting Axe which has a fatter head than a traditional woodmans axe?

Surly, Yes. Our Axe mount will work for axe's with up to 1 3/4 inch head thickness. We actually use the Fiskar X25 for our axe mount displays.
