

PRODUCT QUESTIONS

Do the Easy-Out Awning Brackets (RRAC029) work with the Zero23 line of awnings?

The Easy-Out Awning Brackets (RRAC029) were designed for awnings similar to our Easy-Out Awnings (TENT043). As long as the Zero23 Awning you have is a standard roll out awning, you should be just fine. Compare the mounting holes on the bracket with the spacing between the mounting channels on the back of your awning just to double check! (You can find the holes spacing of the brackets included in the product photos on the site).

Will the Easy-Out Awning Brackets work with a Foxwing awning?

No, but lucky for you we make a bracket specifically for the Foxwing Awning! The Product Code for the Foxwing Awning Bracket is RRAC036.

Will these brackets work with the Ironman awning?

It's very likely! We have not had the opportunity to test fit the Ironman Awning yet, however, many awning manufacturers utilize the same aluminum mounting extrusion on the back.

Will these brackets and the awning work with the front expedition rail kit?

Yes! The awning and the brackets will work with the Front Expedition Rail kit. Get ready for some shade!

Will these brackets fit your series 1 roof rack?

These brackets will work with our previous generation (slimline 1) racks. If you have the older Front Runner rack, where the side profile measure more than 50mm, then the brackets won't work. On the Slimline 1 rack, you will have to drill holes in the side to make them fit.

Would these brackets fit a Smittybuilt awning? And do your awning travel covers come in any other color, like black?

Our Easy-Out Awning Brackets (RRAC029) work for some awning brands with tracks that hold m6 bolts. We have not installed a Smittybilt awning on our

rack and cannot confirm correct fitment. For further question please feel free to give us a call.

Will this work for attaching a "James Baroud" Awning?

We recommend using the Eezi-Awn Awning Bracket (RRAC063) as they have slotted mounting points for more adjustment options. For further information please feel free to give us a call.

Will these work with CVT or Tepui awnings?

Yes. These awning brackets will work with Tepui, CVT, and also ARB awnings.

Will these work for attaching an ARB awning to my Frontrunner rack?

Yes, these awning brackets will work for the ARB awning.

Can a Gordigear Gumtree Awning be mounted on the Slimline 2 with these brackets? Or do i need others?

Pol, its hard to say it will work 100% but looking at the installation instructions it looks almost identical to other models that do work. Check the back plate of your awning and measure the distance of the T-slots. If the T-slots are about 40mm apart then the mounts should work.

Do you have a list of which awnings this is known to work with?

The bracket was developed around our "easy-out" awning, but may work with other brands with similar mounting patterns.
