

## PRODUCT QUESTIONS

### **What is the spacing between two mounting bolts?**

The distance between the two mounting holes on the hinge side is 50mm (2 inches). The distance between the two large studs on the top and bottom for mounting the recovery device is 270mm (10.6 inches).

### **Can the spacing between the two mounts (threaded bolts) be moved closer together as I need 130mm centre to centre to fit my trax cheers?**

They are set at a certain spacing so they can't be moved closer together.

### **Can these be mounted to the ends of a slimline rack.**

Yes, the Recovery Device Brackets can be used on all sides of our Front Runner Slimline II Rack.

### **Can these be installed with the expedition rails on the rack?**

The adjustable nature of the brackets will allow them to be fitted without interfering with the Expedition Rails.
