

## PRODUCT QUESTIONS

### **Will these work with Tepui Roof Top Tents?**

Absolutely! Our tent mounts receive a size M8 bolt from the aluminum mounting tracks that are fitted to the bottom of most tents. The Tepui tents have these tracks and will mount up easily.

### **Will these brackets fit the original Front Runner slimline roof rack?**

Yes, the brackets will fit.

**You mention that they will not work with an Autohome fiberglass tent. If installed as show in the manual I would agree, meaning installing on two separate rails. However if your Autohome is larger than your slimline II rack sitting on a Lexus GX470 and you turned the brackets 45 degrees so the would be on a single rail could you not use your Maggiolina brackets or existing brackets to mount to these brackets which are just higher than the outside rail?**

The official installation of the tent mount feet has them each span across 2 slats for added support. We do not recommend mounting the tent mount bracket on one slat only.

### **Will this Tent Mount Kit work for a Darche Panorama 2 Roof Top Tent? Or is the Tall Tent Mount Kit required?**

Both the Low and the tall brackets will work with the Darche Tent

### **Do I need these or the taller mount kit for James Baroud Evasion RTT. It's a hardshell tent and its dimensions are 79" by 55"?**

For that style tent you will need a special set up to adapt it to our racks.

### **Will these work with AutoHome tents?**

No. These mounts were designed for the "clam shell" style Roof Top Tents. How to mount an AutoHome tent to our rack system would depend on which style tent you have and what size rack you are using.

**I have a cascade roof top tent. Need to know if you sell brackets that would work with the FRS 2 roof rack before I purchase?**

Yes. These tent mounts and our Tall tent mounts will work for the Cascadia roof top tents.

**Will these mounts work with the Smittybilt tent?**

The tent mount kits work with a wide variety of tents. If your tent has aluminum channels with bolts that slide for mounting than you should be good to go!
