Off-Road Traction for the Toughest Terrain

## Next Generation Mud-Terrain Tire

### Technology

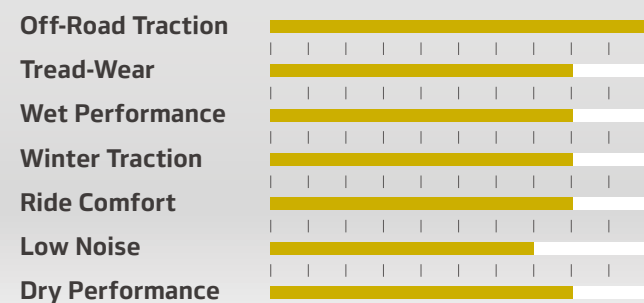

### Performance

### Technical profile

Tread width : 215-315 Rim Diameter : 15-22  
Aspect Ratio : 55-85 Speed symbol : Q

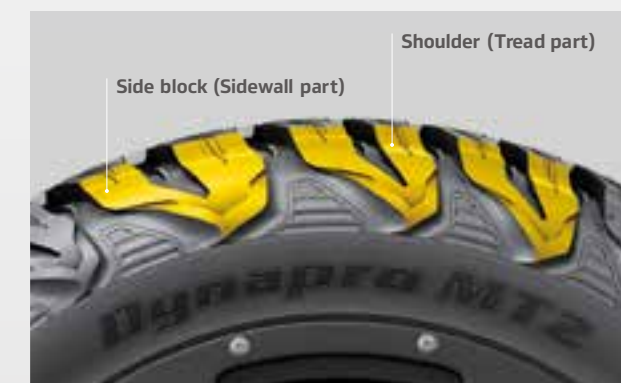

## Aggressive and Functional Sidewall Design

Puncture resistant sidewall. Deep and aggressive traction-shield sidewall provides extra biting edges for off-road traction.

### New Mold Technology Allows for a More Aggressive and Seamless Sidewall

An integrated design linking the shoulder and sidewall blocks completes the aggressive aesthetic with added aerodynamics, which help reduce noise and improve sidewall durability. New split-mold technology enables the removal of the parting line between the shoulder and sidewall blocks.

### A Aggressive Wraparound Tread

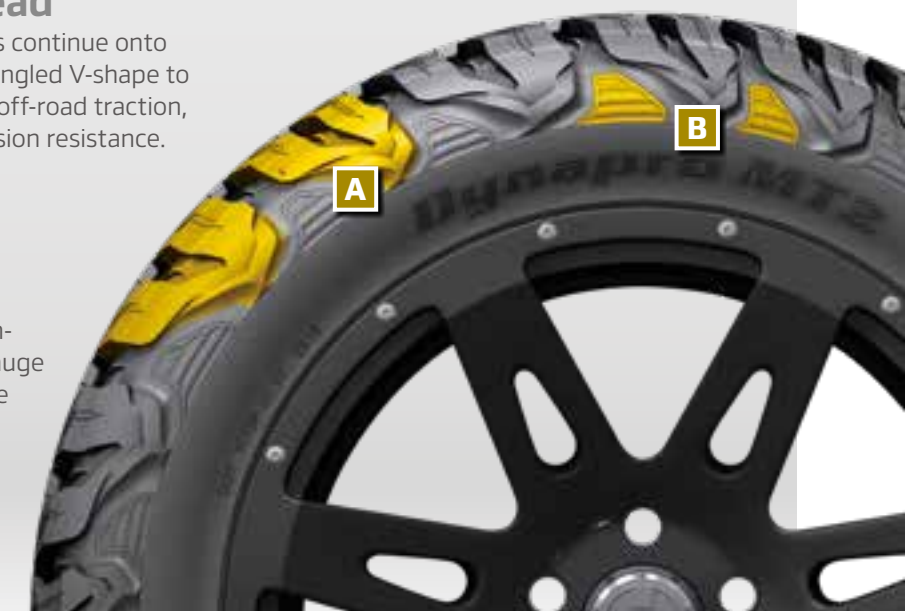

Bold tread features continue onto the sidewall in an angled V-shape to provide additional off-road traction, puncture and abrasion resistance.

### B Sidewall Protection Shield

Additional abrasion-resistant rubber gauge engineered into the sidewall design.
