

anchors for SA and SAH Helmets Explained

Snell SAH2010 helmets have a threaded insert (nutwasher) bonded directly inside the helmet shell. Anchors for these helmets are sold without nutwashers. These anchors use an indexing collar instead of a post and include a tool to orient or index the anchor from the outside of the helmet shell.

Nutwasher bonded inside helmet

Post anchor with indexing post. Suitable for SA helmets only as the post must be oriented by rotating the internal, moveable helmet nutwasher.

Post anchor with indexing collar. Suitable for SA or SAH helmets as the post can be oriented by rotating the internal, moveable helmet nutwasher or the external collar.

Quick Click anchors can be used with either type of helmet

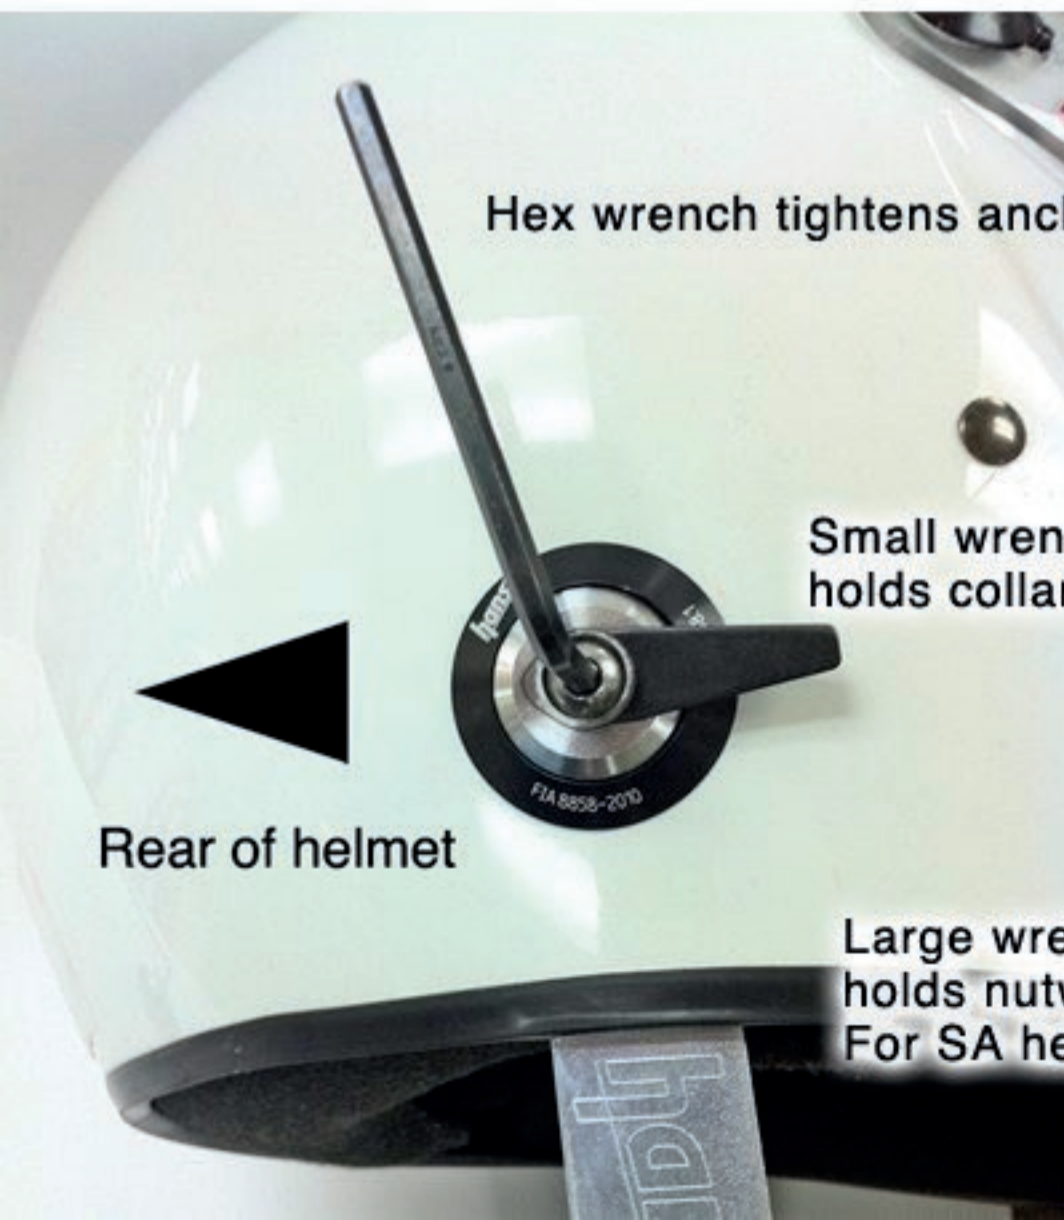

Genuine HANS Screws are Marked with the HANS Logo
