

# Clean The Air You Breathe

## With Hastings Interior Cabin Air Filters

**Cabin Air Filters** are incorporated into the heating, ventilation and air conditioning systems of more than 85% of all new vehicles.

**Unchanged Cabin Air Filters** can impair the health of drivers and passengers, leading to headaches, nausea and allergies.

**An Estimated 85%** of cabin air filters in cars today have not had their recommended replacement.

**Unchanged Cabin Air Filters** can restrict air flow causing decreased performance in heating and air conditioning.

### Most cabin air filters are located:

Behind or underneath the glove compartment

Under the hood on the passenger's side

### Benefits of cabin air filters and how they work

Hastings Premium Filters' extensive line of cabin air filters are manufactured to OE specifications, with thousands of applications covered. Cabin air filters reduce passenger exposure to airborne pollen, bacteria, dust and smog. They also reduce dust and dirt accumulation in the vehicle's interior, while increasing the output and performance of air conditioning and heating units. Cabin air filters should be changed every year or 12,000-15,000 miles to ensure maximum performance.
