

Instructions

- 1) Place light in desired location.
 - a) Use built-in magnet to secure light in place for temporary mount.
 - b) Screw light in place through the 3 screw holes in the base plate. Make sure to check for clearance before drilling/screwing. Use silicone to seal screw holes to prevent leaks.
- 2) Run cable into vehicle avoiding pinch points.
- 3) Plug power adapter into a 12VDC port.

Operation

On/Off Switch: Turns light on and off. Turning off and back on quickly will cycle to next flash pattern.
