

WIRE IDENTIFICATION

- (GD) = Ground
- (T/M) = Taillight
- (LT) = Left Turn
- (RT) = Right Turn
- (BK) = Backup

INSTRUCTIONS:

1. Plug adapter into vehicle and [trailer](#) connectors. Check the lighting system for proper operation. When the right turn signal is activated, the LED above "RT" on the 5-wire flat should activate. This should also be the case for the left turn ("LT"), tail marker ("TM") and backup ("BK").

NOTE:

Locate wires on vehicle by function only. Color coding is not standard with all manufacturers. Apply a small amount of grease to all terminals, both front and rear of terminal assembly to prevent corrosion.
