

#48030

1. Choose an installation location at the rear of the vehicle or inside trunk. Avoid exhaust system, shock absorbers and drive train.

LOCATE WIRES BY FUNCTION ONLY

White - ground (GD)

Yellow - left turn (LT)

Green - right turn (RT)

Brown - taillight (TM)

2. Plug into trailer and check the lighting system for proper operation. Step on the brake to check brake lights, turn on headlamps to check tail / parking lights and operate directional signals to check right / left turn.

TIPS:

Grease applied to the trailer wiring terminals on a regular basis will help prevent corrosion.

A heavy duty flasher may be required to eliminate rapid flashing.

Always unplug boat trailer connector before backing trailer into the water.
