

Installation Instructions

Parts List			<b>Tools Required</b>
Part	Description	Qty.	Hammer
1	Spring Clip	2	1/8" Drift Punch
2	Drive Screw	2	Chisel

1. To remover the damaged spring bar retainer, use the chisel and hammer to remove the drive screw head.

2. Once the drive screw's head is removed; remove the retaining spring. And remove the remainder of the drive screw with the 1/8" drift punch and hammer.

3. Install the new retaining spring and drive screw. Be sure to insert the retaining pin into the top hole of the head. Insert new drive screw into bottom and gently tap into place with a hammer.
