

MAGNUM BUMPER WARRANTY POLICY

Structural Warranty

This warranty only applies under normal conditions and proper use of ICI product. Any modifications or misuse of the ICI product will void the warranty. All ICI Magnum Bumpers have a Limited Lifetime Warranty on the structure beginning on the original purchase date. The warranty only applies to the original purchaser and protects against any structural manufacturer defects. Magnum Bumper structural warranty is expressly limited to the repair or replacement of the defective product or component. Repair or replacement is at the sole discretion of Innovative Creations, Inc. Photographs of the damage must be sent to ICI to begin any warranty claim. These photographs will be used to determine whether or not the product qualifies for a warranty claim, and determine if the product will be repaired or replaced.

Finish/Coating Warranty

ICI Magnum Bumpers have powder coat finish that comes with a one year warranty from the original purchase date. ICI will not warranty the finish after 180 days due to the exposure of the natural elements, and normal wear and tear of the bumper and its components. The warranty does not cover normal wear and tear, modifications or abuse. Chips or damage from stones or impacts of any kind is not covered by the six month finish warranty.

Care and Maintenance

Because of the abuse that the bumpers receive during normal use, it is very important to care for and maintain this product on a regular basis. Clean and protect your new bumper at least two times per month. In regions where salt or chemicals are used to keep roads clear of snow and ice, it is recommended you do this on a weekly basis to avoid rust. Make sure that your bumpers are completely dry after cleaning. Do not let water stand on the surface of the bumper to avoid discoloring and water spots. Inspect your bumper regularly for chips and damage from rocks and other road debris. Bumpers are located in high debris impact areas and will incur chips and damage periodically. It is very important maintain the finish and touch up any exposed steel. This prevents the steel from rusting under the powder coat and the finish from peeling away from the bumper.
