

Frequently Asked Questions

Are Idemitsu and Idemitsu ZEPRO engine oils full synthetic?

Yes, both Idemitsu and Idemitsu ZEPRO engine oils are full synthetic products.

Can I switch from conventional oil to Idemitsu synthetic engine oils?

Yes, you can switch from conventional and synthetic blend engine oils to Idemitsu full synthetic.

Why doesn't Idemitsu offer more oil viscosities?

Idemitsu formulates products based on our customers' needs. Our focus is on lower viscosity engine oils because we provide factory fill products to many of the Asian vehicle manufacturers who utilize the low viscosity lubricants for performance and protection requirements.

Can I use Idemitsu engine oils in my new car?

We recommend following your manufacturer's owner's manual for viscosity and oil change intervals.

Why do you offer so many transmission fluids?

At Idemitsu, we believe that "one multi-vehicle transmission fluid does not fit all." We are proud to offer exclusively formulated automatic transmissions fluids (ATF) and continuously variable transmission fluids (CVTF) that are specific to Asian vehicle transmission applications.

Where are Idemitsu products produced?

Our manufacturing and packaging facility is located in Jeffersonville, Indiana. We also have a research and development laboratory in Wixom, Michigan.
