

Futura EDGE Electronic Key Cutting Machine

Futura EDGE

EDGE

One Cutting Station for all Types of Edge-Cut Keys

Built on the successful Futura platform, the Futura Edge is designed for edge cut keys. The Futura Edge will easily duplicate by copying from the original key, by indirect code or by direct code. Like the Futura Pro, this model is powerful enough for the professional and ideal for inexperienced users thanks to the software-guided procedures.

Controlled by a removable 10" (254)mm) touch-screen tablet, the Futura Edge guides the user step-by-step in all key cutting operations: for example, in selecting the make, model and year for automotive keys, in the choice of the right clamp, how to load the key, etc.

The patented laser reading of the key profile makes the Futura the only electronic machine in the market that allows you to duplicate a flat key without first searching for the relevant cutting card.

- 1 ON/Emergency push button 4 USB port for Tablet charge 2 - Ethernet port
- 3 Power pack connector
- 5 USB port standard
- - Exposed screws are stainless steel for wear resistance and longevity
 - Software interfaces with Instacode[®] and Kreate-A-Kev™

Work Efficiencies

- Patented laser reading of the key profile, no need to search for the relevant cutting card.
- Nickel plated, 4-sided clamp with a patented, precise rotation system
- The color-changing LED lights indicates the status of the cutting process: white - ready to proceed, yellow – process of cutting, green – cutting is complete and it is safe to raise the safety shield.
- Wi-Fi link between machine and tablet or the user can tether the tablet directly to the machine.
- Equipped with two USB ports on the back of the machine; one for tablet recharge and one for the tethering connection so the machine and tablet remain connected and operational even when the Wi-Fi connection is lost or unstable. The second USB port can also be used to connect the supplied USB flash drive to import code tables or machine software updates.
- Optional Code Maker software allows user to create custom cutting cards for standard edge cut keys.
- Fast cutting cycles plus tablet and electronics that deliver fast start up and response times between the tablet and the machine .

"As with all Futura models, the Futura Edge is engineered and manufactured to the <u>highest</u> <u>quality standards</u> so that you are assured of <u>accurate</u> and <u>precise</u> origination and duplication of edge cut keys."

Edge Cut Keys

Edge Cut Station

- Duplicate by copying from the original key, indirect code or by direct code.
- Securely clamp standard residential/commercial keys on side A, smaller blade keys for padlocks, cabinets, etc. on side B
- Dedicated to Automotive are sides C and D ("tongue and groove system") that allow for proper alignment of two-sided keys; even worn keys can be easily decoded
- Step-by-Step calibration instructions
- Optional 06V clamp allows for secure clamping of Best[®] style keys regardless of the key-way. The built-in tip stop makes gauging Best[®] keys simple and easy. Jaw A (same as on the 01V clamp) will be on the opposite side, so this jaw can be used for Best[®] type keys and standard edge cut keys. Simply install the 06V in place of the 01V on your Futura machine using the inner clamp spring from the 01V.

Tool / Accessory Tray

Removable Tablet w/ stand

Ease of Operation

- Shortcut function for vehicle key cutting code searches eliminates manual entry. Simply input the first letters and the software will prompt the make and model for your selection
- Built-in tool/accessory tray on top of the machine
- Multi-language support

Compact and Lightweight

- Compact, lightweight and portable with ergonomic grip for easy lifting.
- · Mounting bracket included for securing the machine to the counter; perfect for mobile operations
- Safety shield slides within the machine body
- Removable tablet stand can be locked onto the hood of the machine or placed on the counter

Safety Features

- Transparent safety shield contains chips and isolates moving parts
- All operations are disabled automatically when safety shield is retracted
- Large emergency stop button on side of machine

PEAKS® / BEST® Clamp for Futura Machines

Eliminate the hassle of tip-stopping Kaba Peaks[®] and Best[®] keys with the new 07V clamp for the Futura, Futura PRO and Futura Edge. The optional 07V clamp has a built-in tip stop to allow the user to easily clamp all current keyways for Kaba Peaks[®] and Best[®] keys.

Jaw position E (BEST[®]) is designed for clamping Best[®] keys that have 0.150" spacing between cuts and can also be used for the Peaks[®] applications that utilize the 0.150" spacing. Jaw position F is used for the Peaks[®] systems utilizing 0.140" spacing. Simply install the 07V in place of the 01V and calibrate the clamp to the machine.

You must have a current software subscription to update the Futura software to allow use of the 07V clamp. The first time you use the specific card you will need to go into "Card Options" and select the 07V Clamp.

How to order: Order No.: BJ1358XXXX D749960ZB 07V PEAKS / BEST JAW (FUTURA)
