ABOUT IMPACT

Impact is more than just a business. It is my life and my passion. There are a handful of companies involved in motorsports safety, but what sets Impact apart is that I am a racer. When I strap into my race truck and set out to conquer 500 grueling miles of unknown Baja terrain, one thing I do know for certain is I can count on my safety equipment. Many of my fellow race competitors are personal friends and I have enjoyed celebrating their wins and losses and life's milestones along the way. I take pride in knowing that my company, my products, and my dedicated Impact staff are a small part in returning my friends and fellow competitors home to their families after both the good and bad days at the track.

At Impact, we are a company that takes what we do to heart. We aren't just a website and email address. We are the faces you see at many of the events; from the heart of motorsports in Indy and Charlotte to the Chili Bowl and Baja. We proudly support and advance the safety of our men and women in the armed forces and also thousands of racers in all complements of motorsports with our innovative products made right here in the USA.

- Yours in Safety,

Robbie Pierce, MasterCraft® Safety and Impact Racing CEO

Motorsports is an inherently dangerous activity! Death, paralysis, or other personal injury may result while you are engaged in motorsports. No product can completely protect against all possible risks and the wearer assumes all risk for potential injury and death while participating in motorsports and racing activities. No warranty or representation is made to the product's ability to protect the user from injury or death. As the user, you are responsible for your own actions and decisions. It is the user's responsibility to become familiar with all available information concerning the correct use and limitations of all products prior to participating in motorsports activities.

Helmets are one of the oldest pieces of personal armor. They have been cobbled from a variety of materials, ranging initially from leather and bronze and later evolving into elaborate creations in iron and brass as mankind advanced and discovered more sophisticated metals. Whether valiantly marching into battle, fearlessly racing chariots, or proudly jousting to earn fame and glory in the royal court, helmets have been used for thousands of years and for hundreds of different reasons. Helmets eventually emerged as a symbol of status and in keeping with heraldic tradition the helmet was often included in coats of arms with the adornment and style reflecting the status and rank of the bearer.

Fortunately, the 'armoring' used in the construction of modern helmets has greatly advanced, and just as material technology evolved upon the arrival of the Iron Age, today's motorsports helmets are a drastic departure in materials and design from what was found on many of the driver's just a few decades ago. Unlike days of the past, modern helmet design has more to do with the science of impact and energy attenuation than it does with the status and rank of the bearer. Whether you are a grassroots racer with a limited budget looking at our 1320 helmet, or a championship winning driver with unlimited funds running our Carbon Fiber Air Draft, all of our helmets meet and exceed our stringent performance characteristics.

So why are there such drastic differences in helmet pricing if all helmets feature similar performance characteristics?

In high-performance racing, it is no secret that reducing weight increases horsepower but requires the use of more expensive and exotic materials. Your helmet is no different. By using more expensive and lighter weight materials such as carbon fiber and blends of Kevlar® with carbon fiber and other composites, Impact can meet and increase the performance characteristics of a helmet's shell and its ability to attenuate energy at substantially less weight. A lighter weight helmet provides an increase in comfort while minimizing fatigue and offering the driver the opportunity to improve overall performance.

HELMET FIT GUIDE

Measure Directly Above the Brow Line for Most Accurate Fit

Whether you are a driver or crew member, a helmet is your first line of personal defense. Accidents can happen on pit road just as quickly and easily as they do on the track. A well-fit helmet should not be too tight or too loose, however it should offer a comfortable, yet snug, fit with an even amount of pressure around the forehead and cheeks.

The most important area to ensure fits correctly and comfortably is around the forehead just above the brow line. If this area fits well, Impact can customize the cheek area with our line of interchangeable cheek pads. We offer cheek pads in varying widths from thin to thick, as well as V-style ear cut outs for radio earbuds. Keep in mind that helmets "break in" from use and may become larger. Make sure to select a helmet that is as snug as can be comfortably tolerated and cannot be moved around on the head in any direction once fastened.

You'll never know how a driver feels when he wins a race. The helmet hides the unfathomable emotions.

-Aryton Senna

IMPACT WILL COORDINATE WITH YOUR HELMET PAINTER

Once painted, we will complete the interior build out and install the communication systems and Frontal Head Restraint clips of your choice!

AIR DRAFT OS20™

CARBON FIBER - 20 DEGREE OFFSET AIR INTAKE

As dirt and off-road racers ourselves, we understand the importance of a helmet that fits and performs in the most extreme environments. Manufactured from our lightest weight carbon fiber material, the Impact Carbon Fiber Air Draft OS20™ offers improved driver comfort and reduced fatigue and neck strain thanks to its lightweight design. The off-centered and left positioned air inlet offers added overhead clearance in the cockpit while the air port is angled 20 degrees to provide ease of movement with the fresh air hose. Cooling comfort and fresh air is pumped through three individual air channels routed to direct air onto the visor further reducing fog and contaminants from interfering with the visual field. The unique placement of the air channels also eliminates the fresh air system from "opening" the microphone and interfering with the communication system. Featuring a wide eye port, the Air Draft OS20™ offers an exceptional range of peripheral vision while the wicker bill design provides aerodynamic down-force to reduce the potential of the helmet "lifting" at high speeds. Additional features such as a built-in chin deflector and the Nomex® covered eye port gasket practically eliminate dust and contaminants from entering the interior of the helmet while offering added thermal protection. Variable-density interchangeable cheek pads and a variety of anti-fog and tinted shields make this helmet truly customizable for a perfect fit. Manufactured from Impact's "Intelligent Gray Matter" inner liner and upholstered with soft-knit fire-retardant Nomex® fabrics, the Carbon Fiber Air Draft OS20™ is the helmet of choice for Impact owner, Robbie Pierce, during his treacherous Baja racing adventures.

AIR DRAFT™
CARBON FIBER - TOP AIR INTAKE

Impact's Carbon Fiber Air Draft is the helmet of choice for professional racers such as Boris Said and Robby Gordon! Utilizing a low-profile version of our popular Venturi Cowl air induction system, the Impact Air Draft will keep you cool, clean and fog-free all race long. Clean air is circulated through three "whisper" channels and directed onto the interior of the visor, creating positive air pressure inside the helmet and preventing contaminated air from entering. The wicker bill design offers down-force and stability preventing the helmet from "lifting" at high speeds in open cockpit environments. The wide eye port provides an exceptional field of front and peripheral vision and includes a heavy-duty 1/8" polycarbonate shield with three-position detent. The Impact Air Draft also features our "Intelligent Gray Matter" liner (a variable-density, single-piece helmet liner) upholstered with fire-retardant soft-knit Nomex® and finishes with a fire-retardant Kevlar® chinstrap with a dual D-ring closure. Interchangeable variable density cheek pads and a variety of tinted and anti-fog shields offer a customized fit, making the Impact Carbon Fiber Air Draft the helmet of choice for the pros!

AIR DRAFT SA™
CARBON FIBER - SIDE AIR INTAKE

Impact's Carbon Fiber Air Draft with the Side Air Inlet offers many of the popular features found on our other Draft models but with a side air inlet for racers looking for fresh air to be ported directly onto their face. The wicker bill design offers down-force and stability at high speeds preventing the helmet from lifting in open cockpit environments, while the wide eye port provides an excellent peripheral and frontal field of vision. The Air Draft SA is upholstered with fire retardant soft-knit Nomex® while interchangeable variable-density cheek pads offer a customized fit. The Impact Air Draft helmet is finished with a fire-retardant Kevlar® chinstrap with dual D-Ring closure, our wide eye port and 1/8" polycarbonate shield with three-position detent.

AIR VAPOR SC™
CARBON FIBER - TOP AIR INTAKE

Featuring an ultra-lightweight carbon fiber construction, the Air Vapor SC offers an aggressive chin bar design providing more room for the microphone while increasing driver comfort and reducing fog. The low-profile fresh air port offers maximum chassis clearance while providing the ultimate in cooling comfort with Impact's exclusive integrated "whisper" channels. Fresh air is circulated through three air ports directed onto the visor, minimizing fog and contaminants while one air port is directed onto the head and channeled towards the neck providing cooling comfort all race long. Superior ambient noise attenuation is achieved through the use of Impact's proprietary insulation foam creating a quieter race environment and reducing the potential for noise fatigue. Impact's Air Vapor SC also features a tapered lower design allowing for additional clearance between the helmet and the frontal head restraint device, thus minimizing interference between these two safety systems. Manufactured using Impact's exclusive "Intelligent Gray Matter" inner liner (a variable-density, single-piece helmet liner) and upholstered with fire-retardant soft-knit Nomex® material for superior comfort and fire protection, the Air Vapor SC offers a truly customized fit with interchangeable, variable-density cheek pads. A wide-angle, wrap-around eye port, a Kevlar® chin strap with dual D-ring closure, and a 1/8" polycarbonate shield with exceptional visual acuity finish off the newest addition to Impact's line of Made in the USA helmets.

AIR VAPOR™
CARBON FIBER - TOP AIR INTAKE

Impact's Carbon Fiber Air Vapor helmet is another exclusive safety solution that has tried and true features for every racer in every form of motorsports. Impact's unique "Ripple Effect" aerodynamic modeling controls airflow around the helmet for stability while the extended chin foil captures downward airflow to reduce helmet lift and buffeting. A high-bypass air induction system circulates air around the head and face as stale air is channeled towards the rear vents. Featuring a slightly narrowed eyeport with excellent peripheral vision, the Carbon Fiber Air Vapor is the ideal choice for racers concerned with track debris entering the cockpit. Like all Impact helmets, the CF Air Vapor includes our "Intelligent Gray Matter" (a variable-density, single-piece inner liner) upholstered with fire-retardant soft-knit Nomex® material for superior comfort and fire protection. The helmet finishes off with our heavy-duty 1/8" polycarbonate shield with three-position detent, interchangeable sizing cheek pads and a Kevlar® chin strap with dual D-ring closure.

VAPOR LS™
CARBON FIBER

The Vapor LS features ultra-light carbon fiber construction making this Impact's lightest weight helmet on the market. Aggressive chin-bar styling provides for additional room for the microphone while integrated vents offer cooling, fog-free comfort. Superior ambient noise attenuation is achieved through the use of Impact's proprietary insulation foam creating a quieter race environment and reducing the potential for noise fatigue. The Impact Vapor LS also offers a tapered design allowing for additional clearance between the helmet and the frontal head restraint device, thus minimizing interference between these two safety systems. Manufactured using Impact's exclusive "Intelligent Gray Matter" inner liner (a variable-density, single-piece helmet liner) and upholstered with fire-retardant soft-knit Nomex® material for superior comfort and fire protection, the Vapor LS offers a truly customized fit with interchangeable, variable-density cheek pads. A wide-angle, wrap-around eye port, Kevlar® chin strap with dual D-ring closure, and a 1/8" polycarbonate shield with exceptional visual acuity finish off the newest addition to Impact's line of Made in the USA helmets.

NITRO™
CARBON FIBER - BOTTLED AIR INTAKE

Impact's Nitro helmet was specifically made with Alcohol and Nitro drag racers in mind, with its integrated breather system and drag specific eye port. Engineered to alleviate the fumes emitted from nitro and alcohol powered dragsters, the Nitro by Impact features a replaceable filter system and bottled air intake port. A built-in SF1 3.3/10 rated Nomex® skirt assists in keeping the fresh air contained in the helmet while the braided Kevlar eye port gasket provides an excellent fire retardant seal around the shield. The Impact Nitro also features a built-in D-ring to keep the head restrained during launch. Manufactured from Impact's exclusive "Intelligent Gray Matter" (a variable-density, single-piece inner liner) and upholstered in fire retardant soft-knit Nomex®, the interior features interchangeable cheek pads for a customized fit. The Impact Nitro also offers a variety of anti-fog, tinted, and Hi-Def Amber shields with excellent visual acuity for the most accurate read of the tree.

AIR VAPOR™
CARBON/KEVLAR - TOP AIR INTAKE

Impact's Air Vapor helmet is another exclusive safety solution that has tried and true features for every racer in every form of motorsports. Impact's unique "Ripple Effect" aerodynamic modeling controls airflow around the helmet for stability while the extended chin foil captures downward airflow to reduce helmet lift and buffeting. A high-bypass air induction system circulates air around the head and face as stale air is channeled towards the dual rear exhaust vents. Featuring a slightly narrowed eye port with excellent peripheral field of vision, the Air Vapor helmet is the ideal choice for racers concerned with track debris entering the cockpit. Proudly manufactured in the heart of Gasoline Alley, the Impact Air Vapor is the result of driver feedback, making this a helmet for racers, by racers. Like all of Impact's helmets, the Air Vapor includes our fire-retardant, variable-density, single-piece Gray Matter helmet liner, a three-position detent 1/8" polycarbonate shield, interchangeable sizing cheek pads and a fire-retardant Kevlar® chin strap with dual D-Ring closure.

VAPOR™
CARBON/KEVLAR

The Impact Vapor features unique "Ripple Effect" aerodynamic modeling and a wicker bill design providing added stability and down-force to accommodate high-speed airflow. Manufactured from a blend of carbon fiber and Kevlar materials, the Impact Vapor is lightweight and capable of withstanding a full race season of abuse, making it the helmet of choice for dirt-track racing legend, Jerry Coons, Jr. Featuring a slightly narrowed eye port with excellent peripheral field of vision, the Air Vapor helmet is the ideal choice for racers concerned with track debris entering the cockpit. Integrated crown and chin bar vents provide fog free ventilation, keeping you cool and comfortable all race long. Manufactured from our exclusive "Intelligent Gray Matter" (a single-piece, variable-density inner liner) upholstered in fire retardant soft-knit Nomex®, the Impact Vapor also offers interchangeable cheek pads available in a variety of thicknesses for a customized fit. The helmet finishes with a Kevlar® chin strap with dual D-ring closure and 1/8" polycarbonate shield with three-position detent.

VAPOR LS™
CARBON/KEVLAR

The Vapor LS is loaded with many of the popular features found on our Vapor SC and is perfectly suited for racers looking for a helmet that offers additional noise attenuation but not requiring a fresh air port. Aggressive chin-bar styling provides for additional room for the microphone while integrated vents offer cooling, fog-free comfort. Superior ambient noise attenuation is achieved through the use of Impact's proprietary insulation foam creating a quieter race environment and reducing the potential for noise fatigue. The Impact Vapor LS also offers a tapered design allowing for additional clearance between the helmet and the frontal head restraint device, thus minimizing interference between these two safety systems. Manufactured using Impact's exclusive "Intelligent Gray Matter" inner liner (a variable-density, single-piece helmet liner) and upholstered with fire-retardant soft-knit Nomex® material for superior comfort and fire protection, the Vapor LS offers a truly customized fit with interchangeable, variable-density cheek pads. A wide-angle, wrap-around eye port, a Kevlar® chin strap with dual D-ring closure, and a 1/8" polycarbonate shield with exceptional visual acuity finish off the newest addition to Impact's line of Made in the USA helmets.

AIR VAPOR SA™
CARBON/KEVLAR - SIDE AIR INTAKE

Impact's Vapor with Side Air inlet offers many of the popular features found on our other Vapor models but with a side air inlet for racers looking for fresh air to be ported directly onto their faces. Featuring Impact's unique "Ripple Effect" aerodynamic modeling and lightweight construction, the design of the Vapor Side Air helmet provides added stability to accommodate high-speed airflow while the narrowed eye port offers added protection from debris. Finished with Impact's "Intelligent Gray Matter" liner (a single-piece, variable-density liner) the Vapor Side Air helmet features a fire retardant soft-knit Nomex® interior and interchangeable cheek pads provide a customized fit.

Bottled Air intake port on back of helmet.

NITRO™

CARBON/KEVLAR - BOTTLED AIR INTAKE

Impact's Nitro helmet was specifically made with Alcohol and Nitro drag racers in mind with its integrated breather system and drag specific eye port. Engineered to alleviate the fumes emitted from nitro and alcohol powered dragsters, the Nitro by Impact features a replaceable filter system and bottled air intake port. A built-in SFI 3.3/10 rated Nomex® skirt assists in keeping the fresh air contained in the helmet while the braided Kevlar eye port gasket provides an excellent fire retardant seal around the shield. The Impact Nitro also features a built-in D-ring to keep the head restrained during launch. Manufactured from Impact's exclusive "Intelligent Gray Matter" (a variable-density, single-piece inner liner) and upholstered in fire retardant soft-knit Nomex®, the interior features interchangeable cheek pads for a customized fit. The Impact Nitro also offers a variety of anti-fog, tinted, and Hi-Def Amber shields with excellent visual acuity for the most accurate read of the tree.

CHAMP™

LIGHT-WEIGHT AEROSPACE COMPOSITES

The aggressive and unique chin bar styling of Impact's Champ helmet is designed to cover the mouth and nose; a feature that acts as a built-in breath deflector minimizing fumes inside the helmet and reducing fog on the shield. The integrated slotted vents on the forehead provide for additional ventilation, while our exclusive "Ripple Effect" helmet crown and wicker bill create aerodynamic stabilization. Manufactured from Impact's exclusive "Intelligent Gray Matter" (a variable-density, single-piece inner liner) and upholstered in our fire-retardant soft-knit Nomex® material, the Champ features interchangeable cheek pads available in various densities for a customized fit. A fire-retardant Kevlar® chin strap with dual D-ring closure and a 1/8" polycarbonate shield with three-position detent finish off this helmet. The Impact Champ also offers a variety of anti-fog, tinted, and Hi-Def Amber shields with excellent visual acuity for the most accurate read of the tree.

MINI-AIR DRAFT OS20™

CARBON/KEVLAR

Looking for a fresh air helmet for the aspiring racer in your household? Look no further than Impact's new Mini Air Draft OS20 offering cooling comfort with the added benefit of minimizing fog. Featuring our wrap-around wide-angle eye port for a panoramic view, the Impact Mini Air Draft OS20 was inspired by it's full-size and best-selling counterpart that has become a mainstay with dirt and off-road racers alike. The off-centered and left positioned air inlet offers added overhead clearance in the cockpit while the air port is angled 20 degrees to provide ease of movement with the fresh air hose. Cooling comfort and fresh air is pumped through three individual air channels routed to direct air onto the visor further reducing fog and contaminates from interfering with the visual field. The unique placement of the air channels also eliminates the fresh air system from "opening" the microphone and interfering with the communication system. Featuring a wider eye port, the Mini Air Draft OS20 offers an exceptional range of peripheral vision while the wicker bill design provides aerodynamic down-force to reduce the helmet from lifting. Variable density sizing pads and a variety of anti-fog and tinted shields make this helmet truly customizable for a perfect fit. The Mini Air Draft OS20 also includes Impact's fire-retardant, "Intelligent Gray Matter" helmet liner, a 1/8" polycarbonate shield with three-position detent and a fire-retardant Kevlar® chin strap with dual D-Ring closure

P2 CREW™

Troy Lee Designs

The Impact P2 helmet by Troy Lee Designs balances form and function with its unique styling and high-flow ventilation features. Constructed from a lightweight composite material, the Impact P2 by TLD is designed with high-flow ventilation ports and exhaust vents providing continuous air-flow and a superior cooling effect, even in the most demanding environments. The low-profile orbit visor provides custom height placement and ease of adjustability with its precision-machined cross-top aluminum hardware while the large eye port offers a large field of vision and allows for easy fitting with most goggles.

CREW FUELER™

AEROSPACE COMPOSITES

Updated for the 2016 season, the Impact Crew Fueler now features a Snell rating, as many professional motorsports are now requiring rated helmets for pit crew fuelers. Featuring an all-axis eye port for a panoramic view, the Impact Crew Fueler is the ideal choice for maintaining awareness when the pit box goes hot. The 1/8" heavy-duty polycarbonate shield provides excellent visual acuity while the Nomex covered gasket provides a tight-seal with excellent thermal performance. The Impact Crew Fueler is finished with our "Intelligent Gray Matter" helmet liner and is upholstered with a soft-knit Nomex® interior ensuring superior impact and fire protection.

Driver Pod - Straight Cord

*DRAG RADIO KITS

Drag racers: depending on the communications system you and/or your car owner have installed, either the Racing Electronics 3-pin "Stock Car" or the 4-pin "Open Wheel" radio kits below will be what you'll need to order. Check with your crew chief and just let us know when you order.

STOCK CAR & *DRAG RADIO KITS

Racing Electronics 3-Pin Connector - External Pod Mount Housing on Driver's Right (Mic Sold Separately)		
Factory Installed RT-900 Style Housing Kit - Straight Cord	10000073	
Factory Installed RT-900 Style Housing Kit - Coiled Cord	10000072	
Factory Installed Ear Jack & Ear Cups with Speakers, Dynamic Noise Cancelling Mini-Mic & Flex Boom	10000078	

OPEN-WHEEL & *DRAG RADIO KITS

Racing Electronics 4-Pin Connector - External Pod Mount Housing on Driver's Right (Mic Sold Separately)		
Factory Installed RT-910 Style Housing Kit - Straight Cord	10000071	
Factory Installed RT-9100 Style Housing Kit - Coiled Cord	10000070	
Factory Installed Ear Jack & Ear Cups with Speakers, Dynamic Noise Cancelling Mini-Mic & Flex Boom	10000079	

OVER-THE-WALL RADIO KITS

Racing Electronics - External Pod Mount Housing on Crew's Left (Mic Sold Separately)		
Factory Installed RT-900 Style Housing Kit	10000074	

Crew Pod - Straight Cord

MICROPHONE KITS

Racing Electronics - (Housing Sold Separately)		
Factory Installed RT-609 Standard Boom	10000076	
Factory Installed RT-609-T Thick Boom	10000075	
Factory Installed RT-709 Over-The-Wall	10000077	

HELMET SHIELDS

Manufactured from the highest grade, UV-stabilized optical quality polycarbonate material available, Impact's helmet shields feature superior dimensional stability, high temperature resistance, outstanding impact strength, and exceptional clarity for the ultimate in visual acuity. Available in various anti-fog and tinted options, Impact has a shield to suit your needs!

SHIELD TEAR-OFFS

Featuring a patented lamination technology, Racing Optics uses only the highest quality "optical grade" DuPont Mylar materials rather than a "packaging grade" clear polyester found in competitive tear-offs. Each package contains three stacks of 10 for a total of 30, 2-mm thick tear-offs, offering the most accurate visual acuity and low reflective properties for a distortion-free lens.

Ultra Shield brand of tear-offs are 2mm thickness each and contain 20 tear-offs per sleeve.

PIVOT KIT

Pivot kits fit all Impact helmets. Each pivot kit contains all the needed hardware for attaching your shield. Impact highly recommends this service after a few shield changes.

10000000

ALUMINUM TEAR-OFF POSTS

These aluminum tear-off posts are a great addition to any helmet. Made with a rugged one-piece aluminum design that works with any Impact shield and brand of tear-off.

10000020

DIRTGEAR BAG SINGLE HELMET

The Canvas Dirt Gear Bag features a helmet storage pocket and 5 outer pouches that vary in size. The bag also features durable handles and a detachable shoulder strap. 13"H x 32"W x 13"D. Colors: Black

PADDED HELMET BAG

Your helmet protects you. Make sure it's protected when not in use! A double-lined tear resistant nylon outer-shell and soft faux shearing liner keeps your gear safe while two easy-to-carry handles make transporting your helmet to and from the track a breeze. The Impact helmet bag offers a full-length zipper and extra space for easy helmet storage and integrated pockets provide storage for miscellaneous accessories. Colors: Black

CLAMSHELL HELMET BAG

The super-soft interior padding featured on our exclusive MCS Clam Shell bag protects your valuable helmet from scratches and dings when not in use. Manufactured from a durable, water resistant Cordura® outer shell with full zipper closure and molded rubber handle, the MCS Clam Shell bag makes protecting and transporting your helmet quick and easy. Colors: Black

DRAWSTRING HELMET SOCK

Made from a high-performance and abrasion resistant fabric, the Impact drawstring sock offers an affordable option for protecting your helmet from everyday scratches and scrapes. Designed with heavy-duty drawstring closures, the sock offers an easy way to stow and transport your helmet while keeping it safe from mishaps. Colors: Black

SHIELD BAG

Hold up to two shields in our handy carrying bag featuring a convenient divider to separate the two. Manufactured from a sturdy, yet soft, material outside and optical cloth quality interior, simply throw this inside your helmet bag or gear bag with extra shields and you are all set for the track!

Colors: Black

81500010

HELMET SUPPORT

Manufactured from high-density compression foam to provide added support and to aid in reducing neck strain, Impact's helmet support is available in Adult and Youth sizes and features a Nomex® fire retardant outer liner complying to the SFI 3.3 specification.

HELMET DRYER

Keep your helmet dry between runs/heats with our helmet dryer. Featuring a single speed low-amp fan and rubber stripping around the base to protect surfaces, the Impact helmet dryer is a must-have item to keep the interior lining of your helmet dry and in good condition all season long.

Standard Skirt

Tapered Skirt

HELMET SKIRTS

Add valuable seconds of thermal protection while reducing wind noise to your communication system with Impact's two or three-layer helmet skirt. Available pre-installed (built-in) at the factory in your Impact helmet or as a do-it-yourself hook-and-loop attachment, our helmet skirt is manufactured from a soft knit Nomex® providing added protection from heat transfer while also reducing dirt and debris from entering the helmet. The two-layer skirt is available in our standard or tapered-in design. The tapered-in design allows the skirt to be tucked into the driving suit more easily while reducing interference between the skirt and frontal head restraint device.

IMPACT REV™ FRONTAL HEAD RESTRAINT

The foundation of the Impact REV is its patent pending Tension Neutralizing Tether design, offering superior frontal and lateral support. Through extensive testing, it was determined the yoke added unnecessary mass to the device, limited the driver's range of motion, and made ingress and egress from the race vehicle difficult. The single tension neutralizing tethering system does all the work, allowing the yoke to be eliminated for a significant weight reduction while minimizing interference between the seat and helmet.

Weighing in at just over a pound and featuring a quick eject release, the Impact REV exemplifies simplicity and ease. The REV is engineered to rest comfortably on the Trapezius muscles rather than the Clavicles, and allows for an impact to be evenly diffused amongst the multiple load paths designed into the single tension neutralizing tethers. The patent-pending design of the REV also reduces the incidence of impact and stress related injuries to the chest or collarbones through the elimination of the interfering yoke and a reduction in the device's mass.

Do you compete in various forms of motorsports? The ergonomic design of the Impact REV eliminates the need to own various devices simply because you have differing seat angles. Available in three sizes (small, medium, and large). Additional features include a quick release system, allowing for a quick eject of the tethers from the helmet and integrated belt guides ensure the restraints stay put. The Impact REV is manufacturer's certified to the SFI 38.1 specification, so it will also meet the Frontal Head Restraint requirement outlined by most racing sanctioning bodies.

SIZE	
SMALL	91000027
MEDIUM	91000026
LARGE	91000025

- Manufacturer's Certified to the SFI 38.1 Specification
- Patent-Pending Tension Neutralizing Tether Design for Superior Lateral & Frontal Support
- Lightweight - Unnecessary Mass was Eliminated; Unit Weighs Just Over One Pound
- Comfortable - No Interfering Yoke and also Features Padded Comfort Foam
- Design - Allows for Quick Ingress and Egress from Race Vehicle
- Ergonomic - Revolutionary Design Allows for Little to No Interference with Seat & Helmet
- Superior Construction - Manufactured from DuPont's Carbon Fiber Composite Materials for Strength
- Only Need One Device - Impact REV Works in Any Race Car and With Every Seat Angle
- Three Sizes Available for the Perfect Fit (Small, Medium, and Large)

Ear Cups

HELMET EAR CUPS

New! Impact's line of noise-canceling ear cups are manufactured from a cushioned comfort PVC foam and can be used to seal out ambient sounds (even while wearing ear buds) or can be fitted with integrated speakers. The Impact Ear Cups can be factory installed into any Impact helmet.

Standard Style Cheek Pads

STANDARD CHEEK PADS

Are your standard cheek pads a little too tight or a little too loose? Offered in a variety of thicknesses and configurations, Impact's full line of helmets feature an interchangeable cheek pad for a customized and perfect fit. Ranging from thin, standard and thick options with a Velcro® attachment for fast changes, our exclusive interchangeable cheek pads are lined with soft knit Nomex® for added comfort. Sizes: Thin/Standard/Thick

V-Style Cheek Pads

V-STYLE CHEEK PADS

Do your radio communication buds add pressure to your ears inside your helmet? Impact offers the ideal solution for this common problem with the introduction of our V-style cheek pads specially designed to relieve padding pressure caused by ear buds. Available in thin, standard, and thick options our exclusive V-style cheek pads install quickly and easily with Velcro® attachment. Sizes: Thin/Standard/Thick

Ear Cup Cheek Pads

EAR CUP CUT-OUT CHEEK PADS

If you are running Impact's noise cancelling/speaker ear cups and require a different thickness cheek pad then look no further! Available in thin, standard, and thick options our exclusive Ear Cup cheek pads install quickly and easily with Velcro® attachment. Sizes: Thin/Standard/Thick

IMPACT ACCEL™ FRONTAL HEAD RESTRAINT

The Impact Accel offers unparalleled comfort combined with the ultimate in frontal and angular impact protection. Utilizing a single self-neutralizing tether system, the Impact Accel device distributes stress under impact through four paths providing an equal distribution of forces while also offering a full range of head motion. Weighing just a mere 1.8 pounds, the Impact Accel features unique body-forming shoulder pads minimizing pressure points on the collarbones and significantly improving comfort. Constructed from lightweight, yet durable, DuPont carbon composite material, the design and choice of materials allows the device to flex in unison with the body, thus minimizing driver fatigue and ensuring your device can withstand the rigors of racing. Adjustable from 10° – 40°, the Impact Accel is your go-to safety device regardless of seat angle or complement of motorsports.

STANDARD SIZE w/QUICK-RELEASE & D-RING	92000499

- Manufacturer's Certified to the SFI 38.1 Specification
- Adjusts Between 10-40 Degrees for a Variety of Uses
- Weighs Less than 2 Pounds (1.8 Pounds or 816.5 Grams)
- Body Forming Shoulder Pads offer Unparalleled Comfort
- Allows for Quick Ingress and Egress from Race Vehicle
- Offers Superior Angular Impact Protection & SFI 38.1 Compliant
- Manufactured from DuPont® Carbon Fiber Composite Materials
- Includes Helmet Hardware, No Need to Purchase Separate FHR Posts for Your Helmet

The thing I love about off-road racing is the pride in how abusive it is.
- Jimmie Johnson

- The Standard Size Accel FHR fits Most Adults, Typically a Driver Over 100 Pounds
- No Special Tools Needed, the Accel uses Standard Tools, We Even Include a Tool Kit
- Tethers are Preset for the Best Protection, No Need for Annoying Tether Adjustments
- Works with Both 2-inch and 3-inch Shoulder Belts
- Helmet Hardware Will Directly Work with Snell SA2015 and SAH2010 Helmets with No Drilling or Modifications Necessary. Easy-to-follow Instructions are Included with the Accel to use the Hardware with Undrilled SA2010 Helmets
- Padded Carrying Case Included

SFI 38.1 RECERTIFICATIONS / FHR SERVICE

LEVEL OF SERVICE	
LEVEL 1 - INSPECT AND REPLACE SFI TAG	
LEVEL 2 - INSPECT, REPLACE SFI TAG AND REPLACE TETHER SYSTEM	
LEVEL 3 - INSPECT, REPLACE SFI TAG, REPLACE SHOULDER PADS AND TETHER SYSTEM	

Tension Neutralizing Tether: Using a single self-neutralizing tether, the loads under impact are distributed through four different load paths. This unique system offers an equal distribution of forces under impact. This system also offers a full range of head motion and side and angular impact protection.

Quick Release Helmet Hardware: This is a unique two finger quick eject helmet attachment system.

Emergency Pull: Optional pull tag for quick disconnect.

Wings: Standard adult unit can accept 2" or 3" seat belts. The wings aid in keeping your harness in place under impact. Even in multiple impact situations where the belts could loosen.

Flexible Bar: This allows for upper body movement and comfort while driving. Also allows user to flex the unit over larger necks.

Belt Guides: The guides keep the unit centered on the driver at all times, not allowing the unit to slip from under the belts.

Body Forming Pads: The body forming Kevlar® belts with Nomex® pads fit under the seat belt, therefore taking any pressure off the collar bone and making the unit very comfortable.

Low Rear: The low profile design allows easy access from confined areas with little interference on roll bars in dragsters and landspeed cars.

Adjustable Rear: The unit is adjustable to fit most seat angles from 10°-40°. This also allows the driver to adjust the back of the unit for comfort or interference with the helmet or the seat.

-----	-----	-----	-----	-----	-----	-----

MEASURE THE DISTANCE AROUND YOUR NECK JUST ABOVE YOUR SHIRT COLLAR

Dr. Wilfred Sweeny and Dr. Wayne Sorenson are not exactly household names, however the invention they have been credited with developing certainly is! While working for DuPont's Textile Engineering lab Dr. Sweeny discovered and engineered a high-molecular-weight product that could be spun into a tough crystallizable fiber offering outstanding thermal and flame resistance. Soon after this discovery, Dr. Sorenson developed a method to achieve mass production and commercialization of the product we now know as Nomex®. This important and revolutionary invention provides much needed thermal protection for thousands of men and women serving worldwide in the armed forces, our hometown heroes fighting fires, and also offers valuable additional seconds of fire protection to racers in all forms of motorsports whether competing in grassroots local events or at the professional level.

Nomex® vs. Treated Cotton Fabrics

Not all fire resistant fabrics are the same! While your budget may be the biggest determining factor in which driving suit you ultimately purchase, the fabric and construction of the garment should also be given equal consideration. The quality of materials and their thermal properties can vary as drastically as the price.

• **Treated Cotton Fabrics:** Treated suits are manufactured from cotton that has been chemically treated with a compound that bonds to the fabric making it fire-retardant. The drawbacks of this treated fabric is the life expectancy of the fire-retardant treatment is limited due to the chemical used to treat the fabric diminishes with each wash or dryclean. Unfortunately, the efficacy of the garment's retardant properties are unknown simply by looking at the suit. Impact does not recommend or manufacture our driving suits from treated cotton fabrics.

• **Nomex® Fabrics:** Driving and Crew suits manufactured from Nomex® are inherently flame resistant, meaning that the exceptional thermal and flame protection provided by Nomex® cannot be washed out or worn away. Nomex® also will not sustain combustion in air or melt when exposed to flame. Because Nomex® carbonizes and becomes thicker when exposed to intense heat; it forms a protective barrier between the heat source and the skin. This unique reaction to intense heat provides valuable escape time when fires occur and helps protect wearers against them.

Suit Layers and SFI Ratings

One of the most effective ways to enhance personal safety on the track or in the pits is to increase the number of Nomex® layers your suit is manufactured from. A two or three-layer suit is far more resistant to flame and heat transfer and will provide you with valuable additional seconds of time during an emergency situation versus a single-layer suit. Additional protection can also be obtained by wearing Nomex® under garments beneath the driving or crew suit as well as a balaclava and Nomex® socks.

Suit Specifications - SFI Specification & FIA Homologation Program

The SFI Foundation and the FIA (Fédération Internationale de l'Automobile) are both non-profit organizations that issue and administer standards for motorsports related equipment. The SFI Foundation is based in the U.S.A and is recognized by racing organizations such as NHRA and NASCAR. The SFI Foundation standards are often adopted as the rules for safety by racing organizations that participate in the SFI Foundation's specification program. The FIA is a European based association that not only issues safety standards for international race cars and equipment, but also governs over international motorsports events as well.

The purpose of a unified set of standards and criteria is to establish recognized levels of quality in motorsports equipment and ensure the overall safety of the racing industry. The consumer benefits from manufacturers that cooperate with the specification programs as there is an established and expected level of performance for the products. Impact proudly and voluntarily participates in both the SFI and FIA specification programs. Both SFI and FIA have certain criteria relating to driving suits and their construction, the materials used, tensile strength, heat transmission, and the garment's thermal resistance.

SFI Ratings Explained

The SFI Foundation's Driver Suit Specification 3.2A tests a garment's fire-retardant capabilities and also details specific garment construction and performance characteristics. The spec contains a rating system based on the garment's ability to provide Thermal Protective Performance (TPP) in the presence of both direct flame and radiant heat. The purpose of the TPP is to measure the length of time the person wearing the garment can be exposed to a heat source before incurring a second degree, or skin blistering burn. There are various sub categories (which refer to the garment's TPP ratings – "Thermal Protective Performance") for the 3.2A specification. The TPP rating is the product of exposure heat flux and exposure time. The TPP results can be converted to the time before a second-degree burn occurs. The higher the garment rating, the more time before a second-degree burn.

SFI Rating	TPP Value	Time to 2nd Degree Burn
3.2A/1	TPP 6	3 Seconds
3.2A/3	TPP 14	7 Seconds
3.2A/5	TPP 19	10 Seconds
3.2A/10	TPP 38	19 Seconds
3.2A/15	TPP 60	30 Seconds
3.2A/20	TPP 80	40 Seconds

A driving or crew suit with an SFI specification label 3.2A/1 will most likely be a single-layer suit and only accepted in the entry-level and grassroots racing organizations. The most commonly required specification by racing sanctions is SFI's 3.2A/5 rated driving suits. Impact offers a full-line of budget-friendly off-the-shelf driving suits manufactured to the SFI Foundation's 3.2A/5 specification. Constructed from Futura Nomex® our 2-layer Racer suit offers many of the comfort and convenience features found on much higher priced and custom suits and is the ideal choice for drivers not wanting to sacrifice comfort and quality because of price. Impact's Custom suits offer style and comfort with our exclusive line of 2-layer lightweight sateen Nomex® and honeycomb moisture-wicking inner liner. Additional creature comforts such as stretch gusseting along the lower back panel and 360° floating sleeves add mobility while making these two suits affordable and stylish.

Are you running an alcohol or Nitro-powered drag car? Chances are your racing sanction will require you to wear a suit manufacturer's certified to the 3.2A/15 or 3.2A/20 standard. Impact has you covered with our off-the-shelf line of Team Drag suits, constructed as a two-piece (jacket and pants). Available by special order, Impact can also manufacture Team Drag suits to the SFI 3.2A/20 specification or if you are looking for something a little more custom, Impact's sales and art department can work with you to create a suit to meet your needs.

Continuous research, development and testing is conducted by Impact on materials and sewing methods to perfect what may be the most under-rated piece of driver's safety equipment. Impact creates each race suit with style and appearance in mind while focusing on the ultimate goal: Safety. We understand that each driving suit that leaves our factory in the heart of Gasoline Alley in Indianapolis, Indiana, has the potential to save a life. We also understand that each driver prefers their suit to be built to their exacting standards. With a wealth of driver feedback, including Impact owner Robbie Pierce, who tests his products to the limits during the grueling Baja 1000, we take every detail into account when designing a suit. No driver will have to "tough it out" for multiple heat races and a main or a 500-mile trek through the Baja desert. Though safety and comfort are Impact's main priority, a driving suit is more than a protective cover between a driver and a potential disaster; every driver wants to look their best on the podium. When you look good, we look good, and Impact is dedicated to continuously researching methods to improve our comfort, styling and options to promote the best practices in safety performance.

CUSTOM DRIVER SUITS

PREMIUM ONE OR TWO-PIECE SFI 5/FIA DRIVER SUITS

Imagine entering turn one at the Indianapolis Motor Speedway and hitting 228mph along the front stretch during the Indy 500, or accelerating to hit 325mph in just under four seconds during a quarter mile run in a Top Fuel Dragster at the Winter Nationals. Imagine racing through the deepest trenches of the Baja desert in a state-of-the-art Trophy Truck at 115mph in the pitch dark, with no assistance in sight for miles and trusting the landscape and obstacles are the same as when you pre-ran that section a few days ago. Now imagine competing in these extreme motorsports in uncomfortable and ill-fitting safety equipment. No fun, right?! Extreme racing environments require uniquely designed products to keep your mind focused on the task at hand: Winning. At Impact, we understand how safety, comfort and style need to work together to create a product that not only fits and performs but also looks good too. Our knowledge of driver comfort is why drivers such as IndyCar's Tony Kanaan, NHRA's Antron Brown and Matt Hagan, and off-road racing's Robby Gordon and Rob MacCachren choose Impact. Impact's line of custom handcrafted fire suits are a result of years of professional driver feedback and feature numerous integrated creature comforts. Available in a variety of colors and fabric choices offering the ultimate in flexible, breathable and moisture-wicking comfort, Impact's suits are manufactured in the heart of Gasoline Alley in Indianapolis, Indiana from our exclusive line of Nomex® material imported from Europe. Custom-fitted to your exacting measurements and embroidered to include your sponsor's branding and series required logos, your Impact custom suit will not only fit and perform, it will look good on the podium too!

- Custom Suits are available manufacturers' certified to the SFI 3.2 specification as a one-piece suit, two-piece (jacket and pants), and also as a three-piece suit.
- FIA Approved suits certified to the 8856-2000 homologation are only available as a one-piece suit.

CUSTOM DRAG DRIVER SUITS

PREMIUM ONE OR TWO-PIECE SFI 15/20 DRIVER SUITS

Impact's line of custom hand-crafted fire suits manufacturer's certified to the SFI 3.2A/15 and 3.2A/20 specification are specially designed keeping in mind the unique needs of the drag racers competing at this level of motorsports. A result of professional driver feedback from top pros at Don Schumacher Racing such as Matt Hagan, Fast Jack Beckman, and Antron Brown, Impact's line of custom drag suits feature numerous integrated creature comforts such as stretch panel gusseting and floating 360° sleeves and are available in a variety of colors and fabric choices. Impact's suits are manufactured in the heart of Gasoline Alley in Indianapolis, Indiana from our exclusive line of Nomex® materials imported from Europe. Your custom suit will be fitted to your exacting measurements and can be embroidered to include your sponsor's branding and series required logos. Available as either a one-piece or two-piece (jacket and pants), Impact's line of SFI 3.2A/15 and 3.2A/20 suits offers an unparalleled level of thermal protection, comfort and styling!

ULTRALIGHT NOMEX® FABRIC COLORS

*** LTV UPGRADE**

Impact now offers all custom drag suits with the option of our LTV material featuring superior thermal performance characteristics thus allowing both the SFI 15 and 20 rated suits to be reduced by a layer, versus our Team Drag suits, while maintaining the same SFI rating and without sacrificing safety. The unsurpassed ply-bias weave of Impact's LTV multi-directional knit material carbonizes under thermal stress and direct flame forming a protective barrier of protection between the heat source and the skin. The unique weaving method of the LTV Nomex® knit also allows for breathable bi-directional airflow and moisture wicking; even under humid conditions and is the material of choice for Antron Brown and Matt Hagan.

CARBON6™ PREMIUM ONE-PIECE SFI 5 DRIVER SUIT

Impact's Carbon6 suit blends exceptional form and function with many of the must-have attributes commonly found only in custom suits. Integrating parabolic design with a unique woven carbon fiber inspired accent fabric, Impact is proud to offer the Carbon6 as our most comfortable and advanced off-the-shelf suit yet! With emphasis on driver comfort, Impact incorporated breathable anatomical stretch paneling in strategic areas for increased range of motion providing a superior performance fit. Handcrafted from lightweight sateen Nomex® fabric, the Impact Carbon6 features V-stitch quilting for exceptional thermal performance. Deep inset pockets and bootcut cuffs finish this exclusive two-layer SFI 3.2A/5 rated suit.

THE RACER™ ONE OR TWO-PIECE SFI 5 DRIVER SUIT

The Racer has been a popular mainstay in the Impact suit lineup for many years. Recently, the Racer was updated to offer modern styling while maintaining the comfort that made previous versions of this suit so popular. Featuring a two-tone design that complements a variety of racecar wraps, the Racer is the ideal option for anyone wanting a budget-friendly, two-layer yet lightweight SFI 3.2A/5 rated driving suit without sacrificing styling, comfort, or safety. Constructed from a matte-Nomex® fabric, the Impact Racer offers anatomical stretch paneling along the lower back (lumbar) area as well as 360° full-floating arm gussets for maximum comfort and flexibility. Additional standard features include bootcut cuffs and extra deep pockets. The box quilting offers valuable additional seconds of thermal protection from heat transfer.

TEAM DRAG™

TWO-PIECE SFI 15/20 DRAG DRIVER SUIT

Impact's Team Drag line is an affordable SFI 3.2A/15 or SFI 3.2A/20 rated fire suit offering many of the same qualities found on our custom drag suits. The Team Drag jacket features built-in arm restraints and floating 360° arm gussets allowing for maximum flexibility while the Team Drag pants offer a relaxed and comfortable rise with adjustable side belts for a customized fit. The SFI-15 and SFI-20 rated Impact Team Drag is handcrafted from our high quality, lightweight imported European Nomex® and also features our exclusive ImpactMax breathable and moisture wicking inner liner for cooling comfort.

CREW FIRESUITS

Promote your team and sponsors while portraying a professional and uniform appearance with Impact's line of off-the-shelf and custom crew fire suits. Looking for something quick and economical? Impact's line of off-the-shelf crew suits will meet the needs of everyone on the team with features such as reinforced seams in high-stress areas, a roomier cut for improved mobility, and deep-inset pants pockets for storage. Additional fabric wear patches, floating 360° sleeves and back panel gusseting (in the one-piece suits) provides a team uniform that is up to the challenge and works as hard as the crew. Looking for something more custom? Impact's talented art department will custom-design your over-the-wall crew's apparel to match your driving suit design or whatever you have in mind. Do you have a mid-year sponsor change and are not looking to purchase all new suits? Impact can also assist with our exclusive line of three-piece suits that keeps your crew outfitted with the latest sponsor apparel, while keeping an eye on the budget.

EVERY SECOND COUNTS

Whether you are in the heat of the battle and setting up your car for the next turn or fueling a driver coming into a pit, a fire can happen when you least expect it. Your driving or crew suit may be the first line of protection against heat transfer and flame, but the typical two layer fire suit only provides about 8-10 seconds of protection against a second degree burn. While this amount of time may seem like forever, when you are in the "heat of the moment", fluid soaked suits can become sweltering. Fire-retardant undergarments are a second line of defense providing an additional layer of insulation against direct flame and thermal transfer. Impact highly suggests the use of fire-retardant undergarments including balaclavas, socks, and long-sleeve shirts and pants, even if these items are not required by your sanctioning body.

DRIVER/CREW UNDERWEAR

ARAMID SFI 3.3 UNDERWEAR

Gain valuable additional seconds of heat and thermal protection with the use of Impact's fire retardant base layer manufactured from our line of lightweight ImpactMAX soft-knit aramid fabric and available in a natural white or charcoal gray. IMPACT CUSTOM CREW APPAREL
DYE-SUB SHIRTS

Promote your team and sponsors while portraying a professional and uniform appearance with Impact's dye-sublimated crew apparel. Only limited by your imagination, virtually any design can be transferred onto our high-quality shirts! Impact's talented art department will custom-design your apparel to match your title and co-title sponsor's branding, your driving suit design or whatever you have in mind. The Impact custom dye-sublimated apparel is also an ideal choice for non-race activities such as corporate and charity events, sports teams and company sales staff.

Manufactured from a choice of our popular lightweight micro-fiber, flatback breathable mesh or denier textured polyester, the Impact crew shirts also feature options such as an inset front pocket, standard or mandarin collar, and are available as a full button-down closure or quarter zip pull-over.

Minimum order: 5

Youth Sizes: S/M/L

Men's and Ladies Sizes: XS/S/M/L/XL/2X *3X/4X/5X available for an additional charge per shirt

*An Initial Artwork Proof Charge (including one proof change at no charge) will be refunded after shirt order is placed.

Advantages of Dye-Sublimation Textile Printing Methods:

- Designs, graphics and colors are only limited by the imagination
- Photograph quality printing; without the use of special techniques
- Images and designs can be printed over the entire item
- Images are permanent and can be washed
- Small minimum order amount (five) and fast turn-around

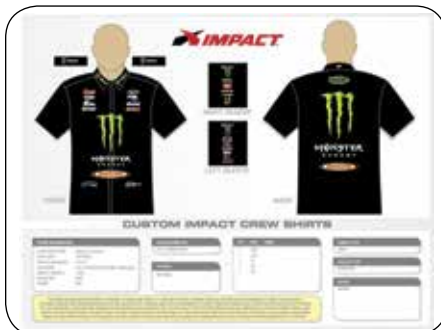

Dye Sublimation Process:

After the artwork process is finalized and approved, the desired design is reverse printed onto a coated transfer-paper using specially formulated pigment suspended liquid inks. The design is then transferred onto the fabric using a high temperature, high pressure heat press which turns the paper's ink into a gas, permeating the material and permanently solidifying the design into the fabric's fibers.

Options:

Inset Chest Pocket

Snap-Down Collar

CUSTOM ARTWORK

Contact your Impact sales representative to get started on your custom-designed shirt. Our sales professionals will walk you through artwork and design ensuring a seamless order process. Our talented and experienced art department will design exactly what you are looking for, creating a professional and uniform appearance and ensuring your team gets noticed by sponsors and fans alike!

ALPHA™
PREMIUM SFI 5 DRIVER GLOVE

Featuring Italian-inspired design and innovation, the Impact Alpha glove offers the ultimate in driver comfort and technology. Designed with a unique parabolic pattern and single piece palm, the construction of the Alpha Glove eliminates troublesome seams and fabric bunching from the palm area. The Impact Alpha also includes a completely external seam construction reducing pressure points and abrasion, while the elastic zig-zag gauntlet closure ensures the gloves stay comfortably in place. Featuring our exclusive lightweight fire-retardant Ultra-Grip treatment and anatomically correct pre-curved patterning on the fingers, the Impact Alpha glove provides superior steering wheel grip, even during the most extreme racing environments.

G4™
SFI 5 DRIVER GLOVE

Manufactured from a soft knit Nomex, Impact's G4 glove features 3/4 finger seams for a perfect fit and feel. The unpadded wrap-around palm patch and split-knuckle guard provide extra comfort and abrasion resistance. The palm of the G4 glove features form-fitting suede lining for maximum grip while the cuff-style gauntlet and hook and loop closure on the upper wrist ensures the gloves stay comfortably in place over the fire suit.

H/T BOLT™
SFI 3.5/5 DRIVER SHOE

The H/T Bolt is our high-top solution for every racer. Made with our grooved sole for cooling, it provides the perfect blend of comfort, support and pedal feel for control and precision in the cockpit. Reinforced, perforated suede side and heel panels protect high-abrasion areas while allowing the multiple layers to breathe. Adjustable ankle strap and Impact's dual-lacing system make a great fit for both wide and narrow feet so it's sure to fit. The durable outer leather is backed with a plush fire-retardant interior for safety and comfort. Manufacturer's certified to the SFI 3.3/5 specification

M/T SPRINT™
SFI 3.5/5 DRIVER SHOE

The Impact M/T Sprint shoe is a mid-top racing shoe built to withstand the high temperatures and wear-and-tear of motorsports, yet is designed to have maximum comfort. The M/T employs our grooved race sole for cooling, support and precise pedal control. The dual lacing system offers a great fit for both narrow and wide feet and the M/T has a deep Achilles cut-out for maximum range of motion. A fire-retardant inner with plush padding and suede outer make this shoe comfortable and safe in all types of cars. Manufacturer's certified to the SFI 3.3/5 specification

Once you've raced, you never forget it and you never get over it.
- Richard Childress

Racing harnesses play a critical role in the overall safety of a race car. The purpose of a racing restraint is to contain the occupant in the seat, while dispersing the deceleration forces across the more substantial areas of the body in order to minimize injury during a crash.

There are many different options for racing harnesses depending on the complement of motorsports and the chassis the restraints are being installed into. Five point harnesses have long been the accepted norm for many forms of motorsports (especially in grassroots racing), however as race cars get faster and the crashes more dynamic, many of the racing sanctions are requiring six and seven point restraints.

Impact offers a variety of options and restraint configurations to meet your racing needs. If you do not see your particular restraint system listed, simply give us a call and we can custom-build your restraints to your needs.

ABOUT WEBBING

The quality of the webbing used in any racing harness is a tremendously vital component and is just as important as the hardware in the overall performance and integrity of the system. Impact manufactures all of our restraints from polyester webbing due to its ability to handle a force more evenly and under a higher load with less stretching. Polyester also offers improved UV-resistance and is less susceptible to environmental degradation factors such as humidity.

Advantages of Polyester:

- High Abrasion Resistance
- Increased Strength over Nylon
- Less Elongation (stretching) Under Load
- Resistant to Ultra-Violet Light
- Resistant to Rot and Mildew
- Offers Improved Color Fasting
- Poly Stretches 5 - 15% of Original Length Under 2500 lbs. of Load (Nylon Stretches 20% - 30% of Original Length Under 2500 lbs. of Load)

STEP ONE - LAP BELT CHOICES

STANDARD CAMLOCK
Impact's lightweight Standard camlock mechanism features a recessed quick-release rotation lever.

STANDARD LATCH & LINK
Impact's Latch and Link hardware is constructed from hardened steel for strength and reliability and features our exclusive matte black finish

ROTARY CAMLOCK
Impact's Rotary camlock mechanism is precision CNC-machined and features a no-sag faceplate design to prevent inadvertent disengagement.
**available as an option*

INTEGRATED LATCH & LINK
The Integrated latch & link lap belts feature the webbing length adjusters integrated into both the latch-side and the link-side attachment hardware creating a belt-centering, center-pull system.
**available as an option*

STEP TWO - SHOULDER BELT CHOICES

STEP THREE - ANTI-SUB BELT CHOICES

5-POINT (One Anti-Sub Belt) **6-POINT** (Two Anti-Sub Belts) **7-POINT** (Three Anti-Sub Belts) *** 6-POINT FORMULA** (Two Anti-Sub Belts) *** 7-POINT FORMULA** (Three Anti-Sub Belts)

FORMULA SUBS

All Impact anti-sub belts include three-bar hardware for adjustment to the fixed length of the belt. On Formula-style restraints, the anti-sub straps are routed through D-rings sewn onto the lap belts eliminating the sub straps from interfering with the driver's legs and pelvis providing increased comfort.

The anti-sub belt(s) play a critical role in the overall effectiveness of a restraint system. The purpose of the anti-sub belt(s) is to maintain the position of the lap belt; ensuring it stays low and tight on the pelvis during an accident and keeps the body from sliding below the lap belt. Containing the pelvis and minimizing the incidence of submarining also reduces the resultant impact load to the head, neck and chest. When the pelvis and body is appropriately contained the deceleration forces are dispersed across the more substantial areas of the body, reducing the incidence of injury.

RATCHET STYLE ADJUSTER

Available as an option on any of the Impact three-inch 16.1 SFI rated lap belts, Impact's Ratchet adjuster is manufactured from a heat-treated chromoly steel and features a double locking mechanism for added safety. The ratcheting mechanism can be specified for either left or right side use and features a bolt-in installation on the mechanism side while the opposing side features the standard three-bar wrap or bolt-in option (available with clip-in installation as well). The ratcheting mechanism replaces one of the standard lap adjusters (left or right, depending on your preference) allowing the belt to be quickly and easily tightened without the need for outside crew assistance. Impact's ratchet style adjuster is only available with the purchase of a complete set of restraints. The ratcheting system will not be sold individually or with the purchase of a lap belt only. The mechanism uses a 1/4-inch drive ratchet (not included).

BOLT-IN WITH 3-BAR

All Restraint Systems feature Bolt-In end hardware and also include a 3-bar adjuster for wrap installation. Clip-in end hardware available as an option.

END HARDWARE

Impact offers additional end hardware options if your installation requires something other than the standard Bolt-in ends. Sold as individual pieces or can be specified on your custom restraint order.

QSR ADJUSTER

Offered standard on all Impact shoulder harnesses, our QSR adjuster offers quick and easy adjustment by simply flipping up the lever and pulling down on the shoulder harness end.

****2-INCH WEBBING**

Dr. John Melvin, the late renowned biomedical scientist and longtime safety consultant to NASCAR, researched the topic of two-inch versus three-inch restraints and arrived at an interesting finding. "Two-inch belts work much better on most bodies. Two-inch restraints are just as good as three-inch if tested to the SFI 16.5 specification," remarked Dr. Melvin at one of the many motorsports safety seminars he participated in.

Because three-inch webbing has the tendency to "ride-up" or fold over the pelvic/hip bone, there is actually less webbing coverage of this area with a standard three-inch lap belt. The Iliac Crest is the curved ridge at the top of the pelvic bone and it forms the most prominent and largest bone in your pelvis. This area of the body is generally most capable of withstanding force, which is why it is important for the lap belts to fit as tightly and comfortably into the Iliac Crest as possible. Two-inch webbing, tested to the 16.5 SFI specification, seats better and more comfortably into the pelvic region, allowing for improved webbing coverage and reducing the incidence of submarining.

Too many accomplishments to list, Dr. John Melvin was a brilliant and humble man whose research and work in motorsports safety truly revolutionized the industry. Dr. Melvin is missed by so many personally and professionally, may he race in peace.

MASTERCRAFT DRIVER'S NET

The MCS Driver's net is designed for use in off-road chassis' and is a mandated safety item in several classes in the Lucas Oil Off Road Racing Series. The MCS driver's net is constructed from three individual straps of 1-inch webbing for maximum coverage and improved lateral support. Available as a left and right side installation, each driver's net is adjustable for the ideal fit to your chassis. Features three bar for chassis tube attachment, ratchet strap for adjustability, and quick release connector closure. Manufacturer's certified to the SFI 37.1 Spec.

SFI COMPLIANT
SPEC 37.1

Type		
Driver's Net (designated by SFI tag placement) - Left 24"x13" Net size; adjustable range 36" to 85"	652001	
Driver's Net (designated by SFI tag placement) - Right 22" x 8" Net size; adjustable range 24" to 75"	652002	

SPRINT CAR CAGE NETS

Impact's triangle cage net is designed for use in Sprint and Midget Car cages and constructed from 1-inch webbing. Includes a three-bar adjuster for chassis tube attachment and latch and link closure. Manufacturer's certified to the SFI 37.1 Spec.

SFI COMPLIANT
SPEC 37.1

DRAG LINK STRAP

For use in open-wheel racing as an added safety feature to keep the car's drag link tethered to the frame during a crash.

50000071

CUSTOM WINDOW NETS

Manufacturer's certified to the SFI 27.1 Specification. Available in our standard 1-inch ribbon style or in our exclusive mesh with 1-inch polyester binding, Impact can custom hand-craft window nets from a supplied pattern and to your exacting standards. Simply send us your pattern cut from cardboard or heavy paper (we can also accept most CAD files as well) and note the top, bottom, front and rear of the chassis in addition to the method of attachment.

- Methods of Custom Window Net Attachment
- A) Snaps
 - B) Screws
 - C) Velcro
 - D) Grommets
 - E) Bar flaps

The Crashes
people remember,
but drivers remember
the near misses.

- Mario Andretti

MASTERCRAFT TIE-DOWNS

MasterCraft Safety Tie-Downs are manufactured from the highest grade steel hardware and feature multiple rows of reinforced stitching for durability, higher load ratings and quality. Available in varying lengths and widths with both S-Hook and Snap Hook attachment ends and with Cam Buckle or Ratchet hardware adjusters, MCS has a tie-down to suit your needs.

1-inch straps are ideal for motorcycles, ATVs, watercraft and light equipment
2-inch straps are ideal for tying down race cars and other heavy load equipment

NYLON NITRO CHUTE

Impact's crossform Nylon Nitro chute is designed with the 200+mph cars in mind. Made to deploy quickly and evenly for a controlled deceleration, our nylon drag chutes are offered in two sizes; 10-foot 4-Line and 12-foot 8-Line configurations, dependent upon the weight and speed of your car. The science of drag chute design considers flight stability, deployment force, flow-through, attachment points and ease of packing. Impact considers all of these factors when manufacturing our chutes, providing you with a reliable and durable product you can be confident in using. Includes: Outer Bag, Lanyard, and Pilot Chute. Colors: Black/Red/Blue

KEVLAR NITRO CHUTE

Impact's Kevlar Drag Chute features an 8-line crossform design and was specifically developed for use on 200mph+ cars. Our 12-foot all Kevlar panel construction offers a 20-percent lighter product and improved abrasion and fire resistance over a comparable nylon chute. Impact's Kevlar Drag Chute also features longer shroud lines for a low and straight deployment with a softer deceleration at launch. Includes: Outer Black Nomex Pack, Lanyard, and our Compression Spring Launch Pilot Chute. Colors: "Kevlar® Yellow" Only 77500000

CLAMSHELL HELMET BAG

The super-soft interior padding featured on our exclusive MCS Clam Shell bag protects your valuable helmet from scratches and dings when not in use. Manufactured from a durable, water resistant Cordura® outer shell with full zipper closure and molded rubber handle, the MCS Clam Shell bag makes protecting and transporting your helmet quick and easy.
Colors: Black
640148

DRAWSTRING HELMET SOCK

Made from a high-performance and abrasion resistant fabric, the Impact drawstring sock offers an affordable option for protecting your helmet from everyday scratches and scrapes. Designed with heavy-duty drawstring closures, the sock offers an easy way to stow and transport your helmet while keeping it safe from mishaps.
Colors: Black
71100910

DIRTGEAR BAG SINGLE HELMET

The Canvas Dirt Gear Bag features a helmet storage pocket and 5 outer pouches that vary in size. The bag also features durable handles and a detachable shoulder strap. 13"H x 32"W x 13"D.
Colors: Black
640150

PADDED HELMET BAG

Your helmet protects you. Make sure it's protected when not in use! A double-lined tear resistant nylon outer-shell and soft faux shearing liner keeps your gear safe while two easy-to-carry handles make transporting your helmet to and from the track a breeze. The Impact helmet bag offers a full-length zipper and extra space for easy helmet stowage and integrated pockets provide storage for miscellaneous accessories.
Colors: Black
71000915

SUIT TOTE

The Impact Suit Tote is an essential item for keeping your suit clean and protected when not in use. Manufactured from a heavy-duty, reinforced nylon and featuring a webbed handle, the Impact Suit Tote also offers a large main compartment for quick and easy storage of your suit along with a separate side compartment for storage of gloves or other racing necessities.
Colors: Black Only
72100010

GEAR BAG

The Impact Gear Bag is constructed from a heavy-duty reinforced nylon with webbed handle and removable padded shoulder strap that features three separate compartments to hold your helmet, suit, frontal head restraint, gloves, shoes and accessories. The main compartment has a heavy-duty zipper and reinforced base to maintain the shape of the bag during loading and carrying while the two 3/4-zip side pockets provide additional storage for miscellaneous items. This durable bag can handle everyday wear and tear and easily doubles as travel luggage offering excellent storage capacity for weekend trips or transporting all your gear to the race track.
Size: 12" x 12" x 11"
Colors: Black Only
72000010

CANVAS TOOL BAG

The MCS Canvas Tool Bag is made from a heavy-duty cotton-duck canvas material and is equipped with two convenient carrying handles and a bag strap for mounting to a door bar or chassis of an off-road truck if desired. Great for storing tools, jumper cables, tow-ropes, and wrench roll-ups, this durable tool bag features a reinforced construction ensuring years of use.
Size: 17-inch x 8-inch x 6-inch with 1 Bag Strap for Mounting
Colors: Black Only
640142

IMPACT GUN HOLSTER

Choose from two sizes to accommodate a 12 volt to 36 volt Impact Gun. Super-rugged vinylized material keeps impact gun from moving about, and buckle closure secures gun. Other pockets hold lug nuts, socket and spare battery. Attaches with hook and loop panel and straps.
Colors: Black Only
Small - Typically carries guns up to 18 volts
(Small L-Shape bag measures 16" x 12")
Large - Typically carries guns up to 36 volts
(Large L-Shape bag measures 20" x 16")
