

**Made in America**

**Lifetime Guarantee**

**Thank you for purchasing this instrument from Intellitronix. We value our customers!**

### **INSTALLATION GUIDE**

#### **LED Digital Oil Temperature Gauge**

**Part Number: M9108**

**\* Always disconnect the battery *before* attempting any electrical work on your vehicle.\***

#### **KIT COMPONENTS**

- ◇ **Digital Oil Temperature Gauge: Displays 18 – 255° F. range**
- ◇ **Pressure Sending Unit (S8013)**
- ◇ **Mounting equipment**

#### **WIRING INSTRUCTIONS**

**Note: Automotive circuit connectors are the preferred method of connecting wires. However, you may solder if you prefer.**

**Ground - Black** Connect directly to an engine ground such as the engine block. For the most accurate readings, connect to the same ground as the sending unit.

**Power - Red** Connect to a switched +12V source such as the ignition switch.

**Dimmer - Purple** Connect to the parking lights to dim the LEDs 50% when the headlights are on. However, **do not** connect to the headlight rheostat control wire; the dimming feature will not work properly.

**Temperature - Blue** Connect to the output of the temperature sending unit. **Do not** use Teflon tape or other sealer on the new sending unit's threads to avoid inaccurate readings.
