

There are many reasons to replace your stock taillights on your C6 with the new LED Taillights made by Adjure Inc. Besides looking much better, they draw less current, run cooler, last for up to 100,000 hours, have a 3 year warranty, much brighter than stock and they are instant on and off. Stock incandescent bulbs must warm up before they reach their full brightness. LED's are at full brightness the second you push on the brake or apply the turn signal. Great for giving the guy behind a little more warning as to what you plan to do. These taillights are about as "plug-n-play" as you can get Very easy to install and they enhance the look of the rear of the car considerably. They are available in clear red or black onyx. They are also DOT compliant.

THE NEW C6
CORVETTE 05-UP

#1- Remove the #15 torx screw at the top of the light.

#2- Remove the lamp from the car

#3- Twist the bulb socket counter clockwise to remove.

#4- Remove the stock bulb from the socket by pulling it out.

#5- Plug your new lamp into your bulb socket.

#6- Twist the bulb socket back into your new lamp, set the lamp back into the car and replace the screw.
