

TPMS SERVICE KITS & ASSORTMENTS

The OEM requires that the valve stem components are replaced every time the tire is serviced on vehicles with TPMS.

Clamp-In Kit Components	Replacement Reason	Result
(A) Valve Core	Nickel plating strips leading to galvanic corrosion & seized valve cores	Leak at valve core, potential broken valve stem
(B) Valve cap w/seal	Valve cap seal wear	Allows moisture into core
(C) Hex nut	Plating worn off, treads corrode	Leak path at valve stem
(D) Grommet/seal	Crack, deteriorate and leak over	Leak path at valve stem
(E) Metal washer (some applications)	Washer conforms to rim during installation	Leak path at valve stem
Snap-In Kit Components	Replacement Reason	Result
(F) Rubber TPMS snap-in valve	Crack, deteriorate and leak over time	Leak pather at valve stem

Refer to manufacturer's specifications for proper torque requirements when replacing hex nuts and valve cores. These specifications can be found in the Dynamic TPMS Service Kit Application Guide.
