

INSTALLATION INSTRUCTIONS

Part Number: VF2053

This filter fits: SEE CATALOG FOR CURRENT APPLICATIONS

K&N® Cabin Air Filters replace your vehicle's stock cabin filter with a reusable design that cleans and freshens incoming air. They are electrostatically charged to grab and hold dust particles. K&N® cabin air filters help control odors while they help capture most mold, mildew, fungus, spores, bacteria and germs.

When applicable, refer to owner's manual for manufacturers installation/removal instructions. The following are helpful steps when replacing/servicing cabin air filter with K&N® cabin air filter.

1. Open the glove box. (Fig. 1)
2. Push the shock up and pull it off the glove box compartment to unlock. (Fig. 2)
3. Push in the sides of the compartment one at a time to release the tabs on each side. This will allow the glove box to drop. (Fig.3)
4. Open the fabric door to improve visibility and access during installation. (Fig. 4)
5. Remove the screw to detach the cabin filter door from the housing. (Fig. 5 & 6)
6. Pull out the dirty cabin filter and Install the K&N® cabin filter.
NOTE: The K&N cabin filter is directional. Install with the pulling tab facing out from the housing.
7. Reverse steps 1-5 to complete the cabin filter installation. With the cabin filter installed, clean an area and apply K&N® Stop Decal. The decal will help notify others that this is a reusable cabin filter.
NOTE: The filter will position itself completely inside the housing once the door is installed. Some resistance may occur when closing the cabin filter door.
