

INSTALLATION INSTRUCTIONS

Part Number: VF1010

This filter fits: SEE CATALOG FOR CURRENT APPLICATIONS

K&N® Cabin Air Filters replace your vehicle's stock cabin filter with a reusable design that cleans and freshens incoming air. They are electrostatically charged to grab and hold dust particles. K&N® cabin air filters help control odors while they help capture most mold, mildew, fungus, spores, bacteria and germs. When they get dirty they can be cleaned and reused and best of all, they come with a 10 year/100,000 mile limited warranty.

1. Open glove box.
2. Apply pressure to the sides of the glove box pushing into the center. This will allow the glove box to be removed to gain access to the cabin filter housing. Fig. 1
3. Without starting the engine, turn the ignition to the accessory/on position and press the air recirculation button. Fig. 2
Now lift up on the tab of the cabin air filter door to gain access to the cabin air filters. Fig. 3
4. There are 2 filters located in the cabin filter housing. Remove the first filter, then slide the second filter to the left and remove from cabin filter housing. Fig. 4 **NOTE: Some vehicle models are not equipped with cabin filters.**
5. With the dirty cabin filters removed, clean any debris that might be present in the cabin filter housing.
6. Install the first K&N® Cabin Filter into the housing and slide it to the right. With the first cabin filter installed, insert the second cabin filter into the housing. Fig. 5 & Fig. 6
7. Reverse steps 1-4 to complete cabin filter installation. With the cabin filter installed, clean an area on the cowl and apply the K&N® Stop Decal. The decal will help notify others that this is a re-usable cabin filter.
