

Our technologies

INNOVATION IN EVERY DETAIL.

Discover our puller technologies — for results you can see and feel.

With more tension, maximum stability, less resistance and high extraction forces, continual improvement is the hallmark of our puller solutions. The result: breakthrough technologies which make it easier to work and deliver flawless results.

WAVESPRING

Especially compact for 50% space savings.

SWITCH

A two-sided spindle tip provides optimal adjustment of the spindle to the shaft.

SELFLOCK

The tight, centered clamping of the jaws via locking screw prevents the hooks from moving or slipping.

QUICK ADJUST

The knurls allow the jaws to be quickly released and moved on the cross-beam without the need for tools.

PUSH TO UNLOCK

Release system for quick fixation and easy release.

PULLPO

The special cross-beam shape enables safe and easy mounting and automatic clamping of the jaws via leverage transmission.

PULLBACK

Automatic retraction of the splitting chisel via actuator bolt.

LIGHT SHIFT

Free-moving, self-retaining jaws with internal spring washer.

HYDRAULIC

Pullers with hydraulic function.

GLIDE & FIX

The improved geometry guarantees quick and easy movement of the jaws on the cross-beam.

EASY SCREW

The built-in thrust bearing facilitates rotation through reduced frictional resistance.

AUTOGRIP

The jaws clamp and center automatically.

ARMLOCK

The cross-legged jaws guarantee maximum stability for suspending the jaws in the slider.
