# Laufenn is

When the Blue that represents rational value and the Red that represents emotional value meet, the Violet of Laufenn is born. Laufenn provides smart consumers both practical value and satisfaction.

Laufenn ensures an exceptional driving experience through optimized performance – in any weather or in any season, rain or snow, summer or winter.

Laufenn provides the performance you need over a wide range of conditions – in your everyday life, under any road conditions, on or off-road.

## Confident

The ability Laufenn provides is rooted in its uncompromising commitment to quality. Whether you're going to work or venturing out to a new destination, Laufenn is there with you everyday providing optimized performance and confidence.

## Simple

Laufenn is Simple – with no add-ons and nothing to spoil your driving experience. Committed to the basics, Laufenn offers a pure driving experience tailored to your needs.

## Open-minded

Laufenn refuses to accept a one-size-fits-all attitude. You know value when you see it and are determined to embrace new choices. Making Laufenn your choice is transforming your own value into a new trend.

## Sensible

Laufenn understands your refined taste. You have an extraordinary eye for quality – all at a glance. Your choices are always solid. Laufenn expresses your excellent style and represents your fashionable personality.

**FIT ICE**

LW71

**Studdable Winter Tire**

The Winter Studdable 'I FIT Ice' provides improved safety and comfort on snow and ice covered road conditions.

**Tire Features**

- Advanced stud technology
- Snow slit design
- 3D kerf design
- Claw edge

**Driver Benefits**

- Excellent braking on icy surfaces
- Enhanced braking and traction in snow & ice conditions
- Enhanced handling on snow
- Maximized snow traction

**Laufenn**

\* - New for 2020

## 4 Wide Grooves

Wet

Four wide, straight tread grooves provide efficient water drainage in wet conditions for improved vehicle stability.

**S FIT AS | G FIT AS | X FIT HT | X FIT AT**

## Noise Reduction Block

Noise

Rib block sections at the tire's edge help to prevent noise generated by the road surface, ensuring a quiet ride.

**S FIT AS | G FIT AS | X FIT HT**

## Zig Zag Block Design

Traction

A zig zag block edge design increases traction in dry, muddy and snowy conditions.

**X FIT HT | X FIT AT**

## Rim Cushion

Durability

A special rubber compound serves as a rim cushion where the tire's bead meets the wheel to prevent damage from external impacts when driving in harsh conditions. This rim cushion also offers more stable driving performance.

**X FIT AT**

## Tie-Bar

Dry

Tie bars that connect the shoulder blocks reinforce the stiffness of the shoulder tread for maximum cornering grip and minimized irregular wear.

**S FIT AS | G FIT AS**

## Wide Tread Design

Handling

A wide tread design ensures stable driving by maintaining top-of-the-line grip in any season and in any road condition, on or off-road.

**S FIT AS | G FIT AS | X FIT HT | X FIT AT**

## 3D Sidewall Edge Block

Off Road

A 3D-edged sidewall block design protects tires from external impact damage and offers enhanced traction in muddy or snowy conditions.

**X FIT AT**

## Rim Protector

Durability

A rim protector designed into the tire's bead section helps to prevent external impact damage that can occur when driving in rugged terrain and also helps protect vehicle wheels.

**S FIT AS | X FIT AT**

## Optimized Stiffness Distribution Design

Comfort

An optimized five variable pitch stiffness distribution tread block design ensures minimum vibration and noise as well as improved riding comfort.

**S FIT AS | G FIT AS | I FIT ICE**

## Long Mileage and Even Tread Wear

Wear life

An optimized tire profile designed by advanced computer-aided simulations improves braking performance and wear by evenly distributing weight over the tire's contact patch.

**S FIT AS | G FIT AS**

## 3D Vibration Analysis Technology

Comfort

The center and shoulder tread pattern of the S FIT AS has been designed using 3D vibration analysis technology to ensure uniform driving performance and enhanced braking performance for more predictable and reliable operation.

**S FIT AS | G FIT AS**

## Stone Ejector

Durability

The stepped groove inside tread block design of tires prevents stones from lodging in its tread, protecting the tire from external damage.

**X FIT HT | X FIT AT**

## Belt Edge Tape

Durability

A folded belt edge tape design is incorporated between the tire's two tread belts to improve handling performance at high speeds.

**S FIT AS | G FIT AS | X FIT HT | X FIT AT**

## Snow 3D Kerf

Snow

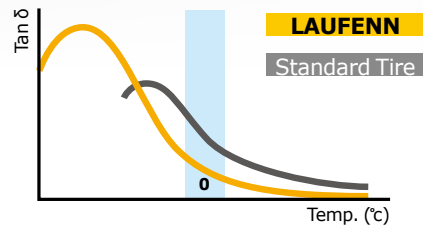

The 3D wave-patterned kerf design used on the tires provide improved grip and handling performance by minimizing block movement when driving.

**X FIT HT | I FIT ICE**

## New Winter Compound

Snow

The application of a new winter rubber compound with improved low temperature performance enhances grip for competent winter driving.

**I FIT ICE**

## Absorbing Holes

Wet

Small holes designed into the tire's tread blocks absorb water to help maximize performance in wet and slushy conditions.

**I FIT ICE**

## 16 Raw Stud Technology

Ice

This advanced stud pin design technique disperses the stud pin arrangement in 16 unique lines, maximizing braking and traction performance. Stud pin lines at the center improve straight line stability, cornering and handling on icy roads.

**I FIT ICE**

## Snow Slits

Ice

An advanced snow slit design ensures maximum edge grip effect on icy roads for better traction.

**I FIT ICE**

## Claw Edge

Ice

A claw-shaped 3D edge design in the tire's center tread blocks helps to improve traction performance on snowy and icy roads.

**I FIT ICE**

## LOAD INDEX & SPEED SYMBOL

The symbol that shows a tire's performance level consists of two parts: Tire performance is marked by Load Index (LI) and Speed Symbol (SS). LI refers to the maximum load that one tire can support, and SS refers to the maximum speed that a tire can handle.

### 1) Load Index

Load index is a numerical code stipulating the maximum load each tire can carry. For example, if the load index is 100, it means that a tire can carry a load up to 800kg.

LI	61	62	63	64	65	66	67	68	69	70
KG	257	265	272	280	290	300	307	315	325	335
LI	71	72	73	74	75	76	77	78	79	80
KG	345	355	365	375	387	400	412	425	437	450
LI	81	82	83	84	85	86	87	88	89	90
KG	462	475	487	500	515	530	545	560	580	600
LI	91	92	93	94	95	96	97	98	99	100
KG	615	630	650	670	690	710	730	750	775	800
LI	101	102	103	104	105	106	107	108	109	110
KG	825	850	875	900	925	950	975	1000	1030	1060

### 2) Speed Symbol

Speed Symbol indicates the speed at which the tire can carry a load corresponding to its load index under service conditions specified by the tire manufacturer.

Speed rating					
Code	km/h	mph	Code	km/h	mph
A1	5	3	L	120	75
A2	10	6	M	130	81
A3	15	9	N	140	87
A4	20	12	P	150	94
A5	25	16	Q	160	99
A6	30	19	R	170	106
A7	35	22	S	180	112
A8	40	25	T	190	118
B	50	31	U	200	124
C	60	37	H	210	130
D	65	40	V	240	149
E	70	43	Z	over 240	over 149
F	80	50	W	270	168
G	90	56	(W)	over 270	over 168
J	100	62	Y	300	186
K	110	68	(Y)	over 300	over 186

## TIRE PRESSURE

The tire inflation pressure is directly related to safety. Therefore, tire pressure must be checked regularly, and proper maintenance can prolong the lifespan of the tires.

### Importance of Tire Pressure

Optimum air pressure should be maintained to ensure safety, driving performance, tire life and fuel cost. Tires have been known to lose up to one pound per square inch (psi) every month. Therefore, it is important to check all tires, even the spare, at least once a month or before a long trip. Recommended Interval: Tire pressure should be inspected monthly.

## MAINTENANCE

Tire wear directly affects the driver's safety and the performance of the vehicle. It is essential for the driver to be well-informed about how to check for tire wear regularly.

### Importance of Checking for Tire Wear

The deeper the groove, which is on the surface of the tire, the more grip a tire will have. You can prevent danger of unexpected accidents by checking for tire wear on a regular basis.

### Recommended Interval Between Check-ups

Laufenn recommends that you check for tire wear once each month. Also, make sure to do a check once more after long distance travel.

### Checking for Tire Wear with Tire Tread Wear Indicator

You can check for the depth of the groove by using a Tire Tread Depth Gauge or by observing the Tread Wear Indicator on the side of the tire. To ensure optimum safety and performance, tires should be replaced when the tire groove wears below 2mm to 3mm.

# Useful Information

## ROTATION

Periodic rotation prevents uneven wear, prolonging the life of your tires.

### The Importance of Tire Rotation

Periodic tire rotation helps extend the life of your tires and improve performance level. For your safe driving and saving money, please refer to the rotation method below.

#### Four Tire Rotation

## BALANCE

Tire balance must be checked if there is unexpected vibration or noise from a tire.

### The Importance of Tire Balance

Tire balancing is a process of compensating for the weight of the tire and wheel after assembly. If not properly balanced, it increases vibration and cause stress on your vehicle.

### When to Inspect for Tire Balance

If you feel a vibration from a tire, visit a mechanic where he or she will attach a balancing weight to the exterior or interior of the wheel to counteract centrifugal forces acting on the heavy areas when the wheel is turning.

### How to Balance Tire and Wheel

To balance the tire and wheel assembly, a balance weight can be used when a certain spot is lighter or heavier than it should be.

## WHEEL ALIGNMENT

To prevent vibration, skidding, noise, and wear, wheel alignment inspection is necessary.

### The Importance of Wheel Alignment

The purpose of wheel alignment is to adjust front-wheel handling while driving. If wheel alignment is off, tire life is shortened while car and mileage performance also decrease.

### When to Check Wheel Alignment

Laufenn recommends to inspect wheel alignment every year or every 12,000 miles. An inspection is required:

1. After a car accident.
2. After tire replacement.
3. When there is uneven wear on a shoulder.
4. When the steering wheel is unstable and/or vibrating.
5. When riding is uncomfortable or fuel efficiency gets worse.

## REPLACEMENT

In order to ensure a safe and comfortable ride, it's strongly recommended that all drivers know when and how to replace tires.

### The Importance of Tire Replacement

Timely replacement of tires is critical for driver safety and also affects vehicle lifespan and performance.

### When to Replace a Tire

1. In the case of severe tire erosion.
2. In the case when repair is impossible due to tire puncture.

### How to Replace a Tire

In the case of a damaged tire and wheel, professional consultation is recommended. Tire replacement should only be done by a trained and highly experienced technician.

1. Remove a tire and wheel from a vehicle.
2. After separating the tire and wheel, replace with a new tire.
3. Check tire balance.
4. Install the newly fitted tire and wheel on a vehicle.

### Tips for Tire Replacement

It is the best to replace two tires on one axle at the same time. Replacement of only one tire of two on the same axle usually causes the vehicle to become unbalanced.

# Claim Adjustment Procedure

For all claims for adjustment, a claim form must be filled out. Completed claim forms should be mailed to the Hankook Tire America Corp. office. Do not ship tires to Laufenn. Laufenn reserves the right to demand physical inspection of the tires on which adjustment is claimed. If Laufenn exercises its right to inspect, it will do so by sending a written request to ship the tires to Laufenn’s (Hankook’s) Claim Center.

In determining the cause for removal from service, always examine both the inside and outside of the tire body. If the tire is not entitled to adjustment, Laufenn will advise the dealer; explain the reason for the failure and advise him/her of preventive maintenance.

**A. If the examination shows that the tire is adjustable under the terms of our Warranty:**

1. Be sure that the tire returned by the consumer bears our name and DOT number.
2. Measure the remaining tread depth in 32nds of an inch. Be sure to measure in grooves nearest the center line of the tire.
3. Refer to ORIGINAL TREAD DEPTH for the size and type of the returned tire. Use the ORIGINAL TREAD DEPTH CHART to determine the percentage of credit due based on remaining tread depth.
4. Fill out the CLAIM ADJUSTMENT FORM completely, sign it yourself and have it signed by the owner of the tire.

**B. Fill out each claim form with the following information for each tire being adjusted:**

This form must be accurately completed by the dealer and signed by the owner of the product. Incomplete forms will not be accepted.

| 10. Tire Installation Date                         | 25. Claim Reason                                   |
| 11. Install Miles                                  | 26. Number of Retreads                             |
| 12. Removal Miles                                  | 27. Additional Notes Regarding Claim               |
| 13. Total Miles                                    | 28. Signature of Dealer                            |
| 14. Vehicle Usage                                  | 29. Signature of Owner (User)                      |
| 15. Original Equipment (Yes/No)                    |  |

**C. Marking tires for physical inspection:**

Please mark all tires being shipped to our Claim Center in the following manner.

1. Clearly state dealer’s name.
2. Mark over identification (DOT) number with crayon and make clearly legible (Disregard if DOT has been cut & sent in with claim).
3. Tire condition - circle area of failure (a two-inch crayon mark around the condition). Ride complaints should be marked as “O.R.”
4. Claim number close to identification number using the last two digits of claim number. Example: If claim number is “H-00123” and the item is number “1”, then the number you would mark on the tire would be “23-1”.
5. Attach a copy of all claim forms to the packing list. vehicle alignment and tire rotation, expected tire packing list.

When an adjustment is received, Hankook will...

Review the claim and either issue credit or request the tires to be shipped to our claim center for physical inspection. If we decide a physical inspection is necessary, we will send you a written request to ship the tires to a designated location. (NOTE: DO NOT send tires to our claim centers unless you are requested to do so.)

Tires must be held by you for thirty days or until credit or further notice has been received whichever is later. If tires are requested to be shipped for inspection during this period and are not available, claim will be disallowed and adjustment credit will not be issued.

# Mounting Precaution

There is extreme danger in attempting to install a tire of one rim diameter on a rim of a different rim diameter.

Always replace a tire on a rim with another tire of exactly the same diameter tire designation and suffix letters.

For example, a 16" tire goes with a 16" rim. Never mount a 16" size diameter tire on a 16.5" rim. While it is possible to pass a 16" diameter tire over the lip or flange of a 16.5" size diameter rim, it cannot be inflated enough to position itself against the rim flange.

If an attempt is made to seat the tire bead by inflating, the tire bead may break with explosive force and could cause serious bodily injury or death.

Rims of different diameters and tapers cannot be interchanged. The below diagrams illustrate the difference between rims of two different tapers and diameters.

## DEATH OR SERIOUS INJURY MAY RESULT FROM:

1. Tire failure due to under inflation/over loading.
2. Follow owner's manual or tire placard in vehicle.
3. Explosion of tire/rim assembly may result from improper mounting.
4. Do not exceed 40 PSI to seat beads.

\* Only Specially Trained Persons Should Mount Tires.

## TIRE MOUNTING PRECAUTIONS TO AVOID INJURY

1. Clean rim. Lubricate rim and beads.
2. Be sure beads are centered.
3. Do not stand over tire while inflating.
4. After beads seat, adjust to recommended inflation.

## WHAT TO DO WHEN THE WHEELS DO NOT LINE UP

The vehicle center line of the chassis/body is found by measuring in equal distance from both sides of the vehicle.

The geometric center line is something a little different. It is determined by the midpoint between the front wheels and rear wheels.

If the wheels or axles are not offset to one side, the geometric center line and vehicle center line will be identical. Should the front wheels or rear axle be slightly off center, however, the geometric center line will be at an angle to the vehicle center line. When the two lines do not coincide, tracking problems result. The rear wheels will not follow the front wheels because one set of wheels is offset from true center.

The third line we must deal with is the thrust line. This imaginary line also runs the length of the vehicle, and is determined by the total toe of the rear wheels. The thrust line divides the total toe in half. If the toe of both rear wheels is zero (which is where it should be), the thrust line would be 90 degrees to the rear axle right up the center of the car.

The geometric and vehicle center lines are one in the same in a properly aligned vehicle (shown in A).

If the rear axle is offset to one side (B) the geometric and vehicle center lines will be at an angle.

If the rear axle or wheels are toed to one side (C), the thrust line will not match up with the center line and the vehicle will pull-in this case to the left.

# Technical Bulletins

## Laufenn Replacement Recommendations: Tire Service Life for Passenger Car and Light Truck Tires.

There is no hard and fast rule to measure service life of a tire. Tires are made with various types of raw materials and a variety of rubber compounds all having varying performance properties. Once a tire is designed and manufactured to achieve given performance property and put into use, it is still subjected to varying conditions such as weather, storage, and still further varying use conditions such as load, speed, inflation pressure, maintenance and road condition. Since all these factors affect the service life of a tire, it just is not possible to predict with accuracy or scientific validity service life of a tire.

Tires unquestionably degrade over time, whether in use or not in use. Some tire and vehicle manufacturers published warnings to consumers of their products to the effect that tires should be replaced after six years of manufacture. Certain industry organizations issued statements concurring with six year service life for tires. Depending on severity of adverse use conditions or non-use, many tires degrade fast enough to require replacement before six years of service life. Others in perfectly good conditions may enjoy service life of more than six years.

The following recommendations are intended to give consumers some idea concerning service life of a tire.

Laufenn always insists and mandates that consumers should properly maintain and periodically inspect their tires. Even if a consumer properly maintains and periodically inspects their tire, most tires will require replacement before 10 years of manufacture regardless of tread-wear. It is recommended that tires in service 10 years or more from the date of manufacture must be replaced even if it was never used.

Date of manufacture can be determined by reading the Department of Transportation (DOT) code on the sidewall. The entire code will be printed on outbound side of the tire. The DOT code will end with the week and year of manufacture. For example, a tire with DOT code reading 1GFN AVN 1408, was manufactured during the 14th week of 2008.

Consumers must regularly have tires inspected by qualified tire dealers throughout its life. Further tires that are over five years of age should be inspected at least twice a year and more frequently if the use is heavy.

Consumers must always be vigilant of their tires' performance, condition, inflation pressure, and any other issues that could affect the life of a tire.

Consumers should properly maintain, including proper inflation pressures, and periodically inspect tires. Failure to do so might result in separation or performance loss resulting in vehicle damage, injury or even death.

For original equipment tires, acquired when purchasing a new vehicle, one should follow all of vehicle manufacturers recommendations.
