

LP ADVENTURE REAR SKID PLATE FOR CVT TRANSMISSION - SUBARU CROSSTREK 2018-2021

The skid plate is an essential component to go into the off-road trails,

ADVANTAGES:

- **Aluminum construction of a 3/16 "thick.**

It provides good protection to the components that are generally exposed under the car as the engine, oil pan and transmission.

- **Designed to protect the oil pan of the CVT transmission.**

Its design allows to properly protect the oil pan of your CVT transmission. This skid plate must be used in combination with the LP Adventure front skid plate.

- **The LP Adventure Skid Plate is compatible with the LP Adventure bumper guards.**

You must have a LP Adventure bumper guard (small or big) to install this skid plate. We have the concern to offer robust parts that will meet the high expectations of our customers. That's why we designed this skid plate in this way. We found that there were no strong points of attachment below the Crosstrek to fix the skid plate directly to it. The LP Adventure bumper guards allow you to install the skid plate securely and offer maximum protection.
