Socket Wrench

Wrench

Socket Set

Stanley Knife

Preparation Before Painting / Installation

- Park your vehicle in a clean, level location. Check to make sure the vehicle is in park, or for manual drive models, place the transmission in first gear. Engage the parking brake.
- Unpack the bracket kit and identify the parts according to the content descriptions.
- A trial fit is recommended to ensure proper positioning and fit.
- Check fit of parts before painting as we will not accept the return of modified or painted parts.

Installation Steps

NOTE: Actual application may vary slightly from illustrations.

Identify the mounting locations for each bracket by looking under the vehicle and finding the holes in the pinch weld.

1

Peel plastic then apply to bracket as shown in the image above. Cut through the plastic with blade as shown in the image.

Begin bracket installation by locating bracket on inner rocker panel so that the hole in the bracket lines up with the bolt sticking out of the rocker panel (M-3304 or M-3305 goes in front locations, M-3306 or M-3307 rear locations). Use the nuts given in the kit to bolt the bracket on to the rocker panel. Complete bracket installation by tightening bolts down.

3

Front Passenger side shown
Repeat for opposite side

Install square bolts into the shaded outer channels. One (1) bolt in each channel per bracket to attach boards.

4

Attach boards to brackets. Tighten all Fasteners.
