JEEP® TRACKS™

Mac's new Jeep Tracks™ utilize the stock holes and hardware (no drilling required) for mounting your hardtop in your TJ and JK Wrangler® - now your cooler will stay secured as you roll down the hill. Works equally as well with soft-top Jeeps®. Works with or without the top in place.

INCLUDES

- (2) Lengths of Track
- (4) Single Stud Rings
- Stainless Attachment Hardware

VERSATIE™ TRACK KITS

Mac's VersaTie™ Track Kits are convenient all-in-one track packages. We provide everything from the track to the single stud tie-down rings as well as stainless steel fastener sets for the precision drilled and countersunk mounting holes. We use stainless steel to prevent electrolysis and rust, keeping your tie-down solution solid for many years to come. In typical Mac's style, we provide a more secure nylon insert nut (as opposed to a simple nut) to assure a lasting installation.

VERSATIE KITS INCLUDE

- (2) Lengths of Mac's VersaTie™ Track-1
- (2) Single Stud Tie Down Rings (The 4' and Longer Kits Come with 4 Rings)

All Required Stainless Steel 1.5" Hardware

TRUCK TRACKS™

Mac's Truck Tracks™ are the perfect adjustable tie-down system for any truck. It's versatile enough for any load – bikes, construction materials, mixed loads – and it's stronger than the bed itself. If your truck can take the weight, Mac's Truck Tracks keep it in place. Unlike competitive systems that slide, VersaTie™ fittings can be removed and replaced with only 1/2" travel. No need to slide the fitting to the end of the bed to remove it. Cleaning is a breeze, too – the surface can be maintained with a scuff pad and the channel blown out with an air hose. Remember – your truck isn't fully loaded 'til it's got Truck Tracks™.

TRUCK TRACKS™ INCLUDE

- (2) Bed Rails
- (4) Removable Single Stud Tie Down Rings
- All Stainless Steel 1" Mounting Hardware

TRUCK TRACKS™ FLOOR AND RAIL INCLUDE

- (2) Bed Rails

TIE-DOWN SYSTEMS ADJUSTABLE

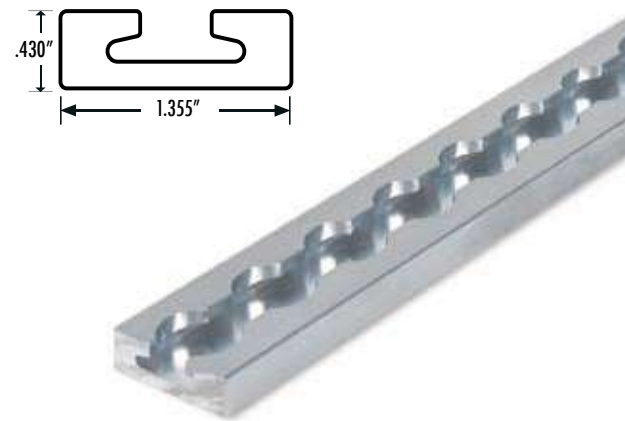

VERSATIE™ TRACK

Mac's superior quality VersaTie™ Track allows complete customization of your tie-down systems. The clean, high-strength track allows flexibility of installation, and adjustable tie-down positions in one-inch increments. Aircraft quality aluminum extrusions are fully CNC machined for secure connections. Track can be flush or surface mounted on interior or exterior surfaces by riveting, bolting, screwing, gluing, or welding. Perfect for floor, wall, ceiling, and roof mounting.

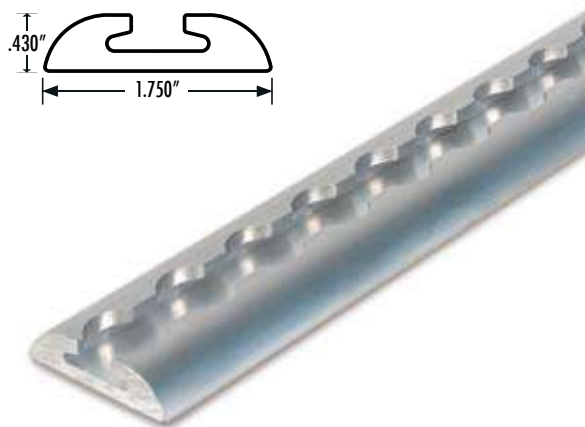

VERSATIE™ TRACK 1

The clean, contoured edges of this track make it perfect for surface mounting and easy installation.

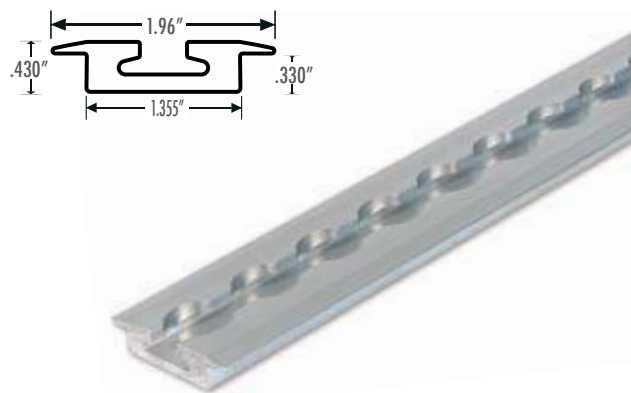

VERSATIE™ TRACK 2

The square-edged extrusion is ideal for recessed mount installation where a smooth, flush finish is required.

VERSATIE™ TRACK 3

The wider contoured extrusion provides a smoother transition for surface mounted track.

VERSATIE™ TRACK 4

Designed for recessed mounting where the wide, smooth, contoured flange will cover cut edges for a clean finish.

ARROWHEAD FOR VERSATIE™ TRACK

Finish off your track section with our our billet aluminum arrowhead track ends.

VERSATIE™ FILLER TRACK

Mac's Filler Track is made of tough extruded vinyl and designed to fill the empty channel of VersaTie™ track to keep it free of debris. (Note: Filler track is only recommended for track that has been recessed.)

MACS TECH TIP

VersaTie™ Track Load Capacities How to Use the Chart*

It is important not to exceed the load capabilities of the track. Below are listed maximum load capabilities of the track calculated using a double stud ring at varying angles. All tracks were tested using 1/4" flat head screws fastened every two inches. Please review the installation safety notes in this brochure for safe tie-down procedures. Note: x°/y° where x° = angle from centerline of track, y° = vertical angle of pull.

Track	0°/0°	0°/30°	0°/60°	0°/90°	45°/0°	45°/30°	45°/60°	90°/0°	90°/30°	90°/60°

COOL DEAL:

Mac's can sew this hardware right onto your straps, minimizing the amount of metal that comes near your vehicle. Also great for ultra low clearance applications.

SINGLE STUD TIE DOWN RING

This VersaTie™ connector has a cadmium-plated alloy steel stud, anodized aluminum body and stainless steel ring for quick, secure one-hand installation. Ring tilts and rotates full 360 degrees.

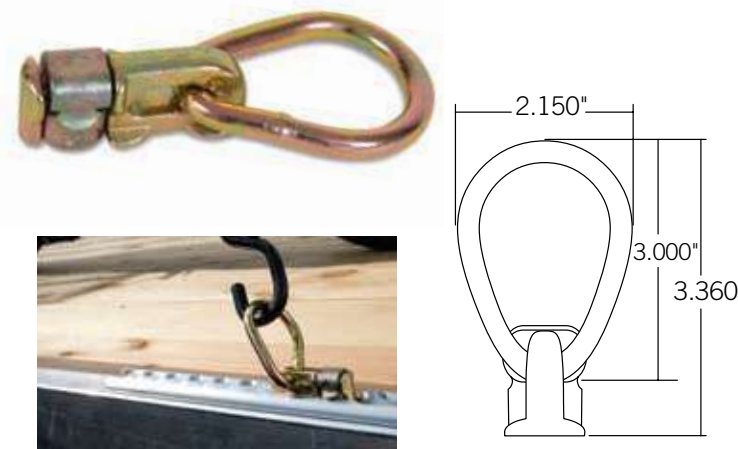

DOUBLE STUD TIE DOWN RING

For maximum strength loads, this fitting utilizes a dual stud connection and high-strength stainless steel ring. Excellent for vehicle tie-down applications.

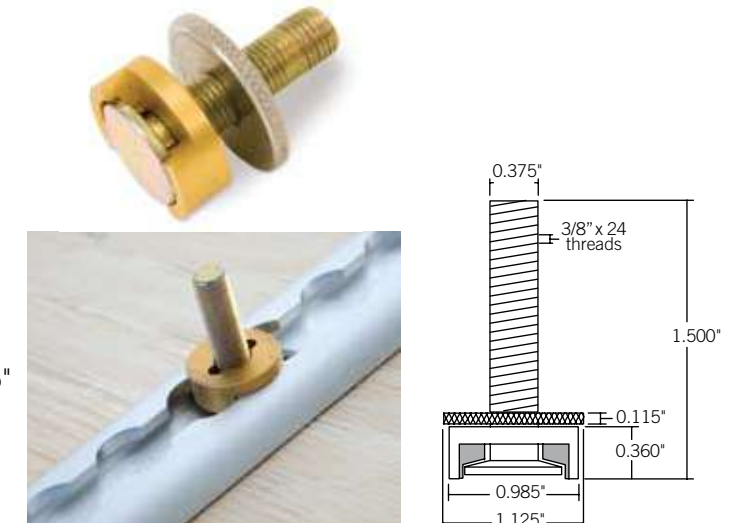

DOUBLE STUD IDLER FITTING

This triangular ring is set up for a 2" strap to run through the flat edge. Use this tool to get around air dams, close fenders, and diffusers. Triangle design allows for pulling off-angle.

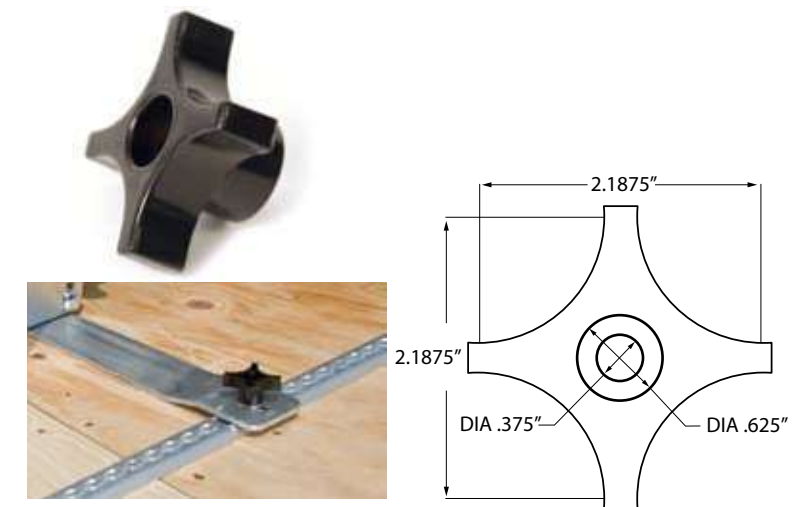

DOUBLE STUD FITTING WITH PEAR SHAPED RING

This fitting utilizes a "pear" ring that allows it to be pulled off angle from the track. Ideal for applications where the track is installed close to obstructions such as cabinets, walls, etc.

VERSATIE™ THREADED STUD

This fitting provides a hand-tightened, rattle-free track connection where quick release capability is not required. Ideal for adjustable shelving, work benches, tools, and equipment. Threaded Stud is rated for 5,000 lb in tension and 2,000 lb in shear.

4 PRONG KNOB

This molded phenolic knob features a 3/8" x 24 threaded brass insert with a throughhole. This is just the ticket for quick release of brackets and components from Mac's Threaded Stud Fitting. Ideal for motorcycle wheel chock spreader bars!

* The four-prong knob is not weight rated and is used for convenience only.

TIE-DOWN SYSTEMS ADJUSTABLE

E-TRACK, A-TRACK & FITTINGS

Mac's E-Track and A-Track is used in a variety of applications: vehicle transportation, commercial, and industrial. Available in steel and aluminum with a wide variety of interchangeable hardware. E-Track fittings work in both E-Track and A-Track.

2-POSITION

4-POSITION

E TRACK MOUNTING PLATE

This quality stamped piece provides a 2 or 4 position attachment point for E or A-Track fittings. Zinc plated for corrosion resistance.

ROUND RING OR D-RING FITTING 3,000 LBS*

Series E or A-Track fitting with 2" Round Ring or D-Ring.

MAC'S ALUMINUM A-TRACK

Mac's Aluminum A-Track has a thickened edge for load beam support. Keep this in mind when mounting as the fittings only go one way.

E-TRACK BEAM SOCKET

Designed for use with standard commercial grade lumber. No load rating due to varying strength of lumber.

ROUND RING HEAVY-DUTY FITTING 6,000 LBS*

Series E or A heavy-duty fitting with 2" Round Ring. Easy access thumb release.

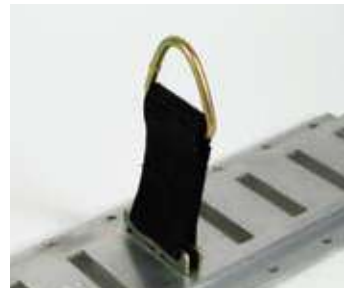

HORIZONTAL E-TRACK

Industry Standard Horizontal E-Track. Painted Black Steel.

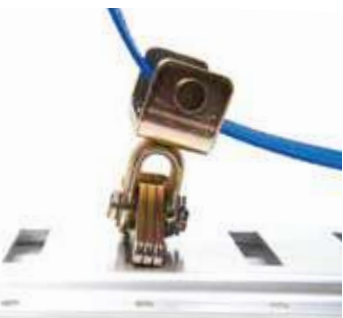

ROPE TIE-OFF FITTING

Mac's 2" Rope Tie-Offs are designed to be used with light-duty ratchet or cam straps for interior van applications. Available in black only.

E-TRACK IDLER FITTING

Just the ticket for axle strap or wheel net applications where body clearance is critical. Works with either E or A-Track and features a roller to reduce strap wear.

VERTICAL E-TRACK

Vertical E-Track is ideal for floor-mounted E-Track when hauling cars. Keeping the slots in line with the track allows the ring to conform to the angle of pull without bending the track—a common problem with Horizontal E-Track.

ANODIZED ANCHOR PLATE

IMAGE IS NOT TO SCALE

Mac's VersaTie™ Anchor Plate Tie Downs are as slick as they are secure. Take the ring out, and you have a low profile, rounded anchor plate that won't get in the way of other loads. Slide the ring in and you are ready for a 1,000 lb.* load! Perfect for hauling motorcycles, carts and just about anything else that fits in the back of a truck! Our exclusive stainless steel backing plate is threaded for easy installation - drill two 1/4" holes and screw it together.

MACS TECH TIP

Tech Tip #1 - When installing your anchor plate packs, it's a good idea to put a dab of Loc-Tite™ on the threads for more security.

Tech Tip #2 - When installing, alternate between both screws to secure the backing plate evenly.

DECK HARDWARE

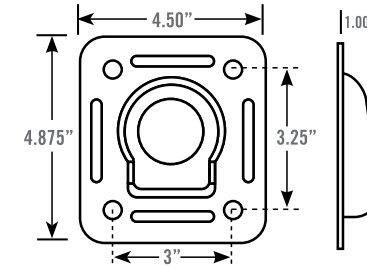

SURFACE-MOUNTED D-RING

This forged D-Ring is surface mounted for ease of installation. Zinc plated for corrosion resistance. Weld-on also available.

Hole Saw: 3.50"
Depth: .875"
Bolt Hole: .375"

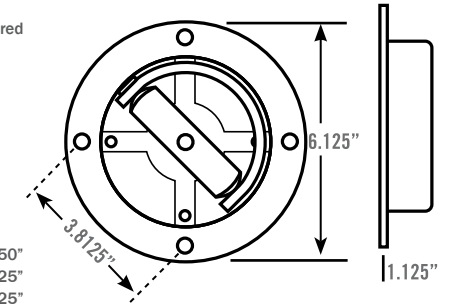

RECESSED D-RING

An industry standard, this 5,000 lb. capacity D-Ring lifts from the recess for easy use. Zinc plated for corrosion resistance.

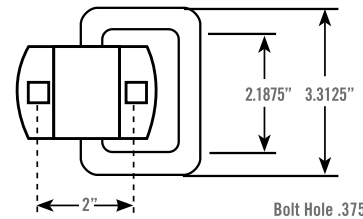

Stainless Steel pictured

Hole Saw: 4.50"
Depth: 1.125"
Bolt Hole: .3125"

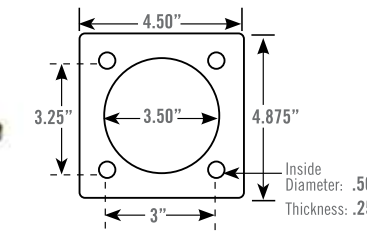

RECESSED 360° SWIVEL D-RING

Heavy duty 6,000 lb. capacity swivel D-Ring offers 360° rotation for maximum tie-down convenience. D-Ring lifts from recess for easy use. Zinc plated and stainless steel available.

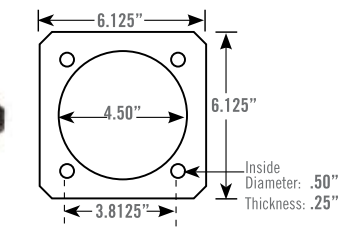

SURFACE-MOUNTED IDLER

This surface-mounted fitting is typically used as an idler fitting for a strap to pass through. Smooth surface helps protect webbing from abrasion. A perfect fit for 2" Straps. Ideal for Wheel Nets!

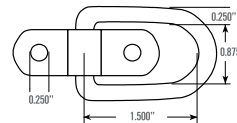

BACKING PLATE FOR RECESSED D-RING

Cut from 1/4" thick steel. This piece is a must to achieve the full capacity of the D-Ring.

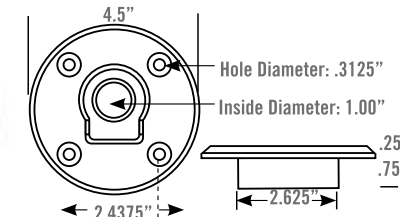

BACKING PLATE FOR SWIVEL D-RING

Cut from 1/4" thick steel. This piece is a must to achieve the full capacity of the D-Ring.

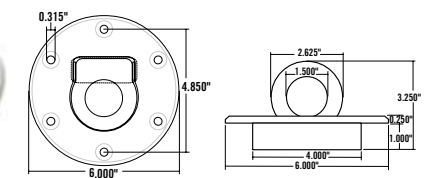

LIGHT-DUTY SURFACE-MOUNT D-RING

These handy surface-mounted D-rings work great for individual tie-down locations. 1" mounting hardware included. Sold in pairs with mounting hardware included.

BILLET 5,000 LB ALUMINUM D-RING

Recessed D-Ring that is fully CNC machined from billet aluminum. Aluminum backing plate available.

BILLET 10,000 LB ALUMINUM D-RING

Recessed D-Ring that is fully CNC machined from billet aluminum. Aluminum backing plate available.

HEAVY DUTY

BELOW IS A CLOSEUP OF THE WHEEL NET SYSTEM FORD COMMISSIONED US TO MAKE TO HOLD AN OCCUPIED EXPLORER ON AN ARTICULATED DRIVING SIMULATOR. JUST ANOTHER EXAMPLE OF EXACTLY HOW MUCH ABUSE OUR TIE-DOWNS ENDURE.

WE SIMPLY COULD NOT COMPROMISE ANYTHING

"When Ford Motor Company showcased the "First in the World" indoor Dragstrip Dyno Display in their booth at the SEMA Show, Mac's Tie Downs were their only choice for safety and security. We simply could not compromise anything with an indoor display that featured a Mustang blasting down a simulated 1/4 mile dragstrip on a chasis dyno with hundreds of people standing in front of the car. A failure of a critical safety system would be catastrophic – that is why we trust Mac's Tie Downs to make sure that nothing is left to chance. Mac's quality and commitment to safety is unmatched in the industry today!"

PRO PACK

You don't have to be a professional to appreciate all the benefits of our newest tie down package. You just have to want the ultimate protection available to transport your vehicle. The 40" through-the-wheel Pro Pack has four of our best selling ratchet straps and four axle straps that have been made 40" long to accommodate today's larger wheel and tire combinations. To that we add 32" of padded fleece sleeve protectors so the only surface touching your nice wheels is a 3/8" foam pad...covered in soft black fleece. This is the most protective strap package on the market.

ULTRA PACK

Mac's best-selling tie-down package is back, and it's better than ever. The Ultra Pack features separate axle straps and ratchet straps. The hardware on a separate axle strap is shaped to allow for tight clearance applications. Our full-length sleeve is designed to stay in place (unlike competitive sliding products) and is made from the thickest material available. All straps in this pack have more than twice the number of stitches than most competitors' straps. Four each ratchet straps and axle straps are included in the signature Mac's black duffel bag for a complete tie-down solution.

- (4) 10K* Combination Axle Straps
- (4) Strap Wraps
- (1) Mac's Black Duffle Bag

SUPER PACK

Mac's Super Pack is ideal for more open applications where clearance is not an issue. Combining the axle straps and ratchet straps keeps costs down while maintaining the same high quality the industry has come to expect from Mac's. We've twisted the hooks on our straps to keep them aligned for maximum strength and ease of use. The pack comes in one of Mac's popular black bags for neat portability.

HEAVY DUTY

STRAPS

AXLE STRAPS

COMPARE MAC'S AXLE STRAP WITH A LEADING COMPETITOR'S STRAP.

Design, materials, and workmanship are all the highest quality on the Mac's strap. When you put ours next to theirs, we think the differences are obvious. Mac's 10,000 lb.* rated Axle Strap uses 12,000 lb.* webbing, and thick, full-length sleeve protector. Mac's charges only a little more for our superior quality straps. We think it's worth the difference, and so will you.

MAC'S PROTECTIVE SLEEVE IS TWICE AS THICK WITH FULL-LENGTH PROTECTION.

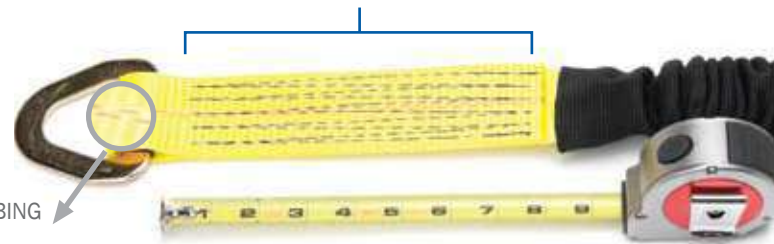

THE COMPETITOR'S PROTECTIVE SLEEVE IS SHORT AND FLIMSY AND CAN SLIDE OUT OF PLACE.

SUPERIOR STITCHING:

Here we have pulled back the protective sleeve so you can take a close look at our sewing compared to theirs.

DIRECT HOOK KIT

DIRECT HOOK KIT

Converts a 2" wide ratchet handle to a shorter one with this bolt on kit!

DYNO SLEEVE

Mac's Dyno Heat Shield protects up to 600 degrees* - because we all know what hot pipes do to straps!

STRAP WRAP

Mac's strap wrap is more than just hook and loop fastener. It's webbing with a square ring and hook and loop fastener sewn on along with an embossed rubber pull handle. This thing is meant to last. Great for keeping your straps tidy. Also works well for garden hoses, air line, etc.

PROTECTIVE FLEECE

The ultimate protection for fine finishes. This sleeve features an integral piece of foam padding and a hook and loop fastener construction. Attach over 2" webbing. Ideal for use on Axle Straps or Combination Axle Straps.

COMBINATION AXLE STRAP

Our most popular automotive tie down. This 10,000 lb.* unit combines an axle strap and a ratchet strap into one assembly. Features include: wide-handle ratchet, adjustable loop diameter, and full-sleeve protector.

ADJUSTABLE TIE-BACK STRAP

This 10,000 lb.* strap offers approximately 12" of adjustment by simply sliding the delta ring to the desired position. Typically used in pairs on one end of the vehicle with ratchet straps used for tension on the other end.

FIXED LENGTH TIE-BACK STRAPS

Simple, strong, and convenient. Ideal for applications that demand strength without adjustability.

RATCHET STRAPS

WITH TWISTED SNAP HOOKS

This 10,000 lb.* rated all-purpose strap features twisted-snap hooks on both ends with a wide-handle ratchet.

WITH FLAT SNAP HOOKS

This 10,000 lb.* rated all-purpose strap features flat snap hooks on both ends with a wide-handle ratchet.

WITH WIRE HOOKS

This 10,000 lb.* rated all-purpose strap features wire hooks on both ends with a wide-handle ratchet.

WITH FLAT HOOKS

This 10,000 lb.* rated all-purpose strap features flat hooks on both ends with a wide-handle ratchet.

*These are the most popular sizes, but we have thousands of configurations available.

HEAVY DUTY

HOW TO ORDER CUSTOM 2" TIE-DOWN STRAPS

To order a 2" custom strap, choose the necessary components of your desired strap, identify the corresponding identification code and list them in the following sequence:

FIXED END HARDWARE

A

COLOR & LENGTH

R

TENSIONER TYPE

M

RUNNING END HARDWARE

A

= 2-AR72MA

DETERMINES ASSEMBLY LENGTH

For example: To order a red 2" x 72" ratchet strap with a flat snap hook on the fixed end, and a flat snap hook on the running end (as shown above). The order number would be: 2-AR72MA

Note: Other hardware and webbing is available.

*In all cases, straps are measured.

WHEEL NETS

**TO BE THE BEST, WE
RELY ON THE BEST...**

Our motto at CytoSport is "Driven by Science – Inspired by Performance" and nothing out-performs Mac's Tie Downs . When it comes to getting our Muscle Milk Porsche RS Spyder to the track, whether it's across the country or around the world, Team CytoSport trusts nothing less than Mac's to ensure our vehicle arrives in prime racing condition.

Quality products, exceptional service and peace of mind. Mac's Tie Downs wins in every class.

MUSCLE MILK Founder CytoSport™ Inc. and
American Racing Legend

WHEEL NETS

WHEEL NETS

WHEEL NETS METHODS

Why would you choose one system over another? The fixed point with ratchet works excellently, when tying down cars of identical wheelbases, parked in exactly the same location on the trailer each time.

The fixed point with wrench operated lashing winch is useful for tight quarters where a standard ratchet might be problematic.

E-Track has been in use for over 50 years, and the broad install base means parts are plentiful. Our idlers are the lowest in the industry; clearing air dams and splitters by a larger margin.

VersaTie™ has twice as many locations to connect to and has the lowest adjustable idler available. For ultra-low profile vehicles, there is no substitute.

E-CLIP

TIRE BLOCK

For those who need a 'one size fits all' tire tie down, Mac's offers the Tire Block. A set of three Tire Blocks threaded onto a standard 2" strap keep the strap from migrating off the tire with the rubber 'teeth' that bite into the tire's grooves. When used with an idler and track system, the tire block makes for a very flexible tie-down system. Ideal for commercial carriers.

- (4) Backing Plates for Recessed
- (1) Large Padded Duffle Bag

WHEEL CRADLE

Mac's rubber wheel cradles keep everything in the same place, every time. They do an excellent job preventing wheel movement and augmenting tie-down straps.

MACS TECH TIP

IMPORTANT! Before tying your dragster down, inflate the rear tires to a level that will allow the wheel nets to do their work! Lack of pressure in the rear tires can negate the effect of the net.

DRAG PACK

Mac's Drag Pack is the ideal solution for getting your dragster from your garage to the track and back again safely. The rear nets use a CNC-machined billet aluminum bar to spread the stress over the whole tire. Using a single strap on an oversized, soft tire can damage the tire in transit. All necessary D-Rings and connectors are included.

MOTORCYCLE PACK

Mac's founder, Colin McLemore, has been into bikes since way back. Harleys, Hondas, BMWs – they all have a special place in his heart (and his garage!) That's just one of the reasons we're so adamant about the quality of our motorcycle packages and products. Because there's a right way to tie down your bike, and at the end of the day, all that counts is that it's in the same pristine condition as when it left your garage. Hey, everyone here at Mac's uses them, and we wouldn't steer you wrong.

16" PROTECTIVE FLEECE

The ultimate protection for fine finishes. Full-length, thick-padded fleece sleeve.

MOTORCYCLE PACK INCLUDES

- (4) 1" x 6' Ratchet Straps
- (4) 1" x 18" Soft Loops
- (4) Strap Bands
- (1) Small Black Duffle Bag

STRAP BANDS

A great method for keeping your straps tidy.

SMALL BLACK DUFFLE BAG

A heavy-duty bag designed to store your straps and hardware. Plenty of room for storage of tie downs for one bike.

VERSATIE™ PACK

These anchor plates and rings offer a low profile, quick-release, four-point tie-down system with a safe Working Load of 1,000 lbs.* Set of four.

STRAP RINGS

Transform virtually any 8mm fastener into a tie-down point on your bike or ATV! Stainless Steel, Made in the USA!

HANDLEBAR HARNESS WITH CUP

This Canyon Dancer™ design adds a hard rubber 'cup' to prevent the harness from migrating inward and damaging grips and controls.

HANDLEBAR HARNESS

Time-proven Canyon Dancer™ design that grabs the handgrips to provide a forward tie-down point in limited clearance applications.

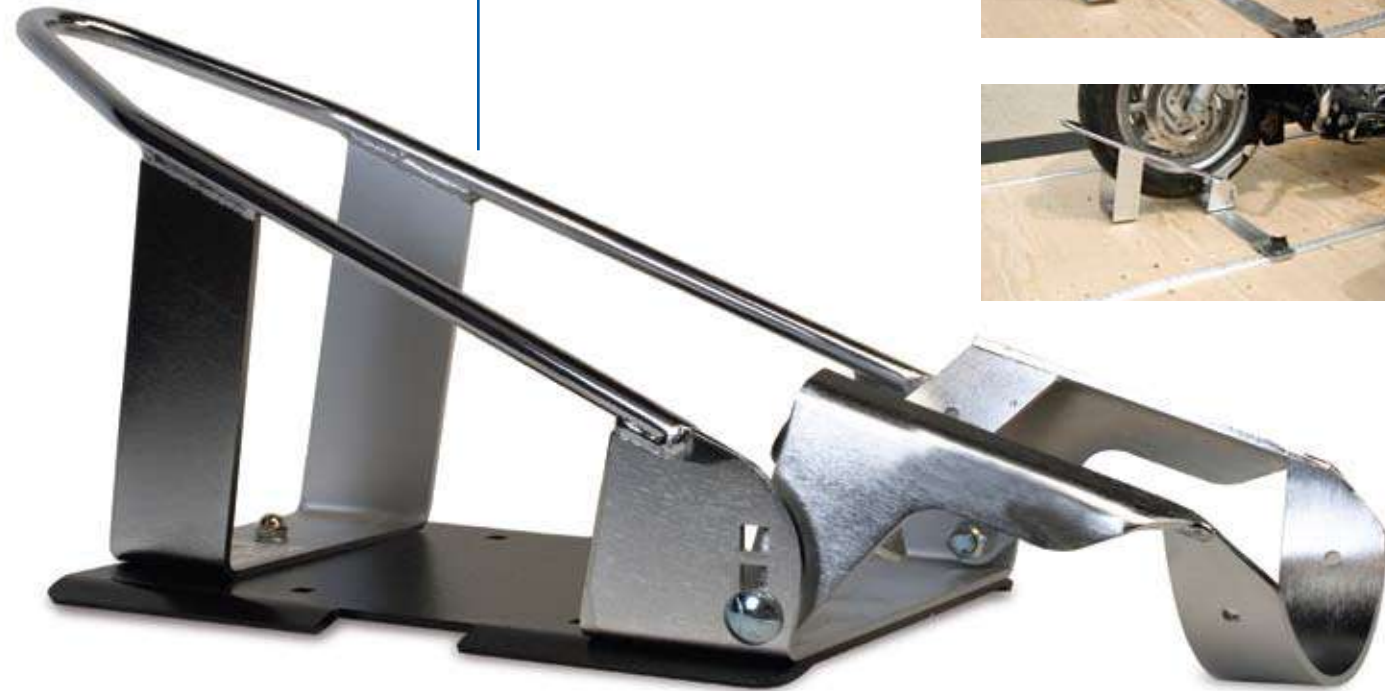

LOCK CHOCK

Made of 3/16" carbon steel plate and 5/8" solid thick-walled tubing, the Lock Chock is made to last. A generous chrome plate finish makes it shine – just like your ride. An optional Narrow Tire Kit is available for tires 3.5" wide and narrower.

THE SAFEST EASIEST WAY FOR ONE PERSON TO LOAD A BIKE!

NARROW TIRE KIT

MAC'S TECH TIP

Using the Lock Chock is a one minute, one person job. Simply roll the front wheel of your bike in and let the self-locking chock do the work. The rear cradle uses simple, gentle leverage to firmly lock the bike - it does not flip or snap into position. To release, simply pull backward with about the same force as pulling off a center stand.

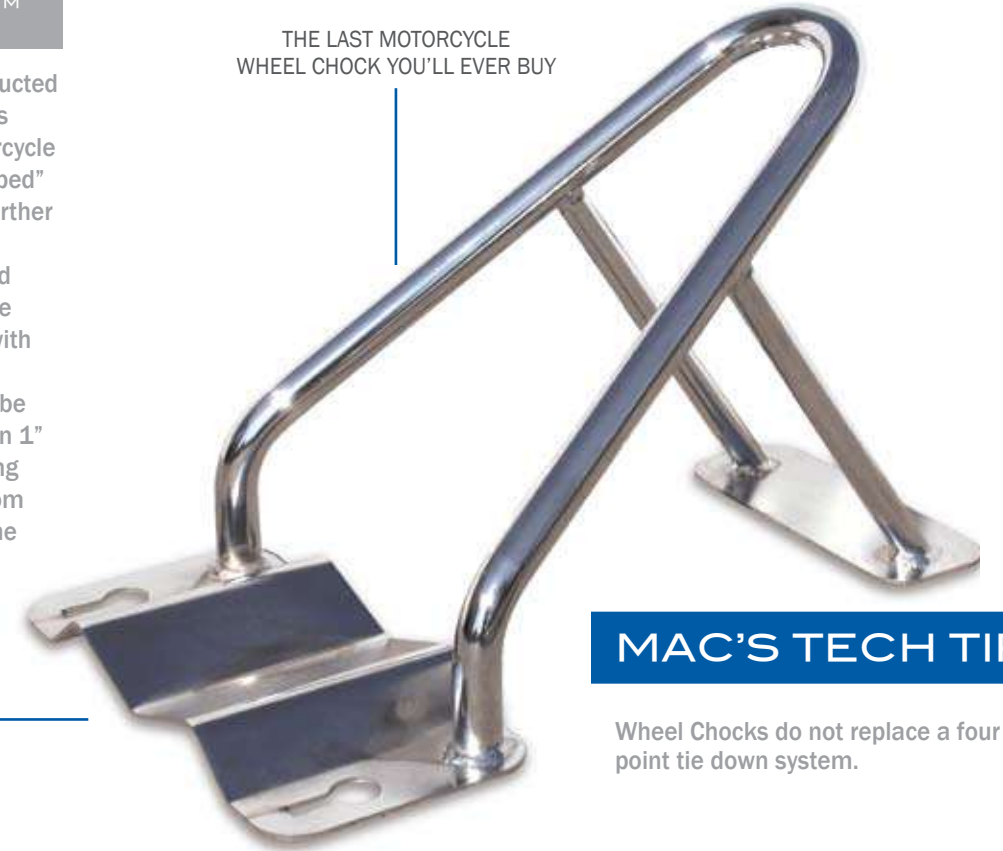

MAC'S WEDGE™

This chock is truly universal. Constructed from mandrel bent steel tubing, this chock will handle virtually all motorcycle tires. Due to its unique "wedge shaped" design, the narrower the tire, the further into the chock it sits. The bike sits on top of a base plate when secured for ultimate stability. In addition, the Mac's Wedge™ can be integrated with our VersaTie™ track by the use of a spreader bar allowing the chock to be adjusted front to rear in the trailer in 1" increments. Our innovative mounting system prevents Mac's Wedge™ from popping out of place, eliminating the biggest problem with other wheel chocks.

WEDGE-SHAPED DESIGN ESTABLISHES A UNIVERSAL FIT

THE LAST MOTORCYCLE WHEEL CHOCK YOU'LL EVER BUY

MAC'S TECH TIP

Wheel Chocks do not replace a four point tie down system.

ATV PACK

ANCHOR PLATE ASSEMBLY

STAINLESS, THREADED BACKING PLATE FOR ANCHOR PLATE ASSEMBLY

ATV PACK INCLUDES

- (2) Rear Nets
- (2) Front Nets
- (4) Strap Bands
- (1) Medium Duffle Bag

Anchor plate version comes with all mounting hardware.

Mac's ATV Wheel Net Pack is the ideal way to transport any ATV. We've talked with so many customers who are compressing their suspensions with conventional ratchet straps, and they seem to have one of two problems:

EITHER

1) Connecting to the chassis and compressing the suspension so it can't compress further is hard on suspension components.

OR

2) They don't compress the suspension, and as the trailer bounces up and down the straps are snapped from loose to taut over and over again until they break.

SOLUTION: To solve these issues, Mac's has designed a wheel net that grabs the ATV where the stress should be - at the tires. This method allows the ATV to move the way it was designed without undue strain on the straps. Four nets (two large, two medium) come with all the mounting hardware you need and a slick Mac's storage bag to boot.

MAC'S TECH TIP

Tech Tip #1 - When installing the anchor plates, select a point slightly ahead and behind each tire. This will ensure an even weight distribution and keep everything where you left it.

Tech Tip #2 - Make sure your tires are properly inflated when using these nets - they need to hold their shape for secure travel.

UTV

UTV PACK

Mac's Side by side UTV Tie-Down Pack When the UTV market started exploding, we needed something a little heftier than our standard Moto pack, and still not as costly as our car tie-down kits. This 5,000# kit is what we came up with. Four 7' (6' working length) combo straps, identical in function to our Super pack, but changed a bit for better UTV geometry come in this set, along with four Strap Wraps. We put it all together with our classic duffle bag for a complete kit; everything you need to strap down one UTV up to 1650#! Only available in Black.

INTEGRAL SOFT LOOP RATCHET WITH VINYL COATED S-HOOKS

Constructed with a flat snap hook on the running end for maximum safety, these straps integrate a soft loop with flat snap hook and D-Ring combo. Time-tested for safe, convenient load transportation. Rated at 2,800 lbs.* max.

INTEGRAL SOFT LOOP RATCHET WITH FLAT SNAP HOOKS

A Mac's exclusive! This assembly integrates a ratchet strap with a soft loop. No more looking for lost soft loops. Vinyl coated S-hook on running end. Rated at 2,800 lbs.* max.

INTEGRAL SOFT LOOP CAM WITH VINYL COATED S-HOOKS

Just like the above strap, but made with a cam buckle and S-hooks for lighter loads. Safe working load of 400 lbs.*.

SOFT LOOPS

The perfect addition to a ratchet or cam buckle strap. Eliminates metal hardware contacting the load. Ideal for looping around handle bars, triple trees, etc. Made from 4,000 lb.* double-stitched webbing. (Sold in pairs)

1" RATCHET STRAP

Made with high-quality, easy-to-operate, wide-handle ratchet and large vinyl-coated S-hooks. Constructed of 4,000 lb.* polyester webbing and rated at 2,800 lbs* max.

1" CAM STRAPS

This strap uses a heavy-duty cam buckle that prevents slipping. Made with large 4,000 lb.* polyester webbing and rated at 1,200 lbs* max.

HOW TO ORDER CUSTOM 1" TIE-DOWN STRAPS

To order a 1" custom strap, choose the necessary components of your desired strap, identify the corresponding identification code and list them in the following sequence:

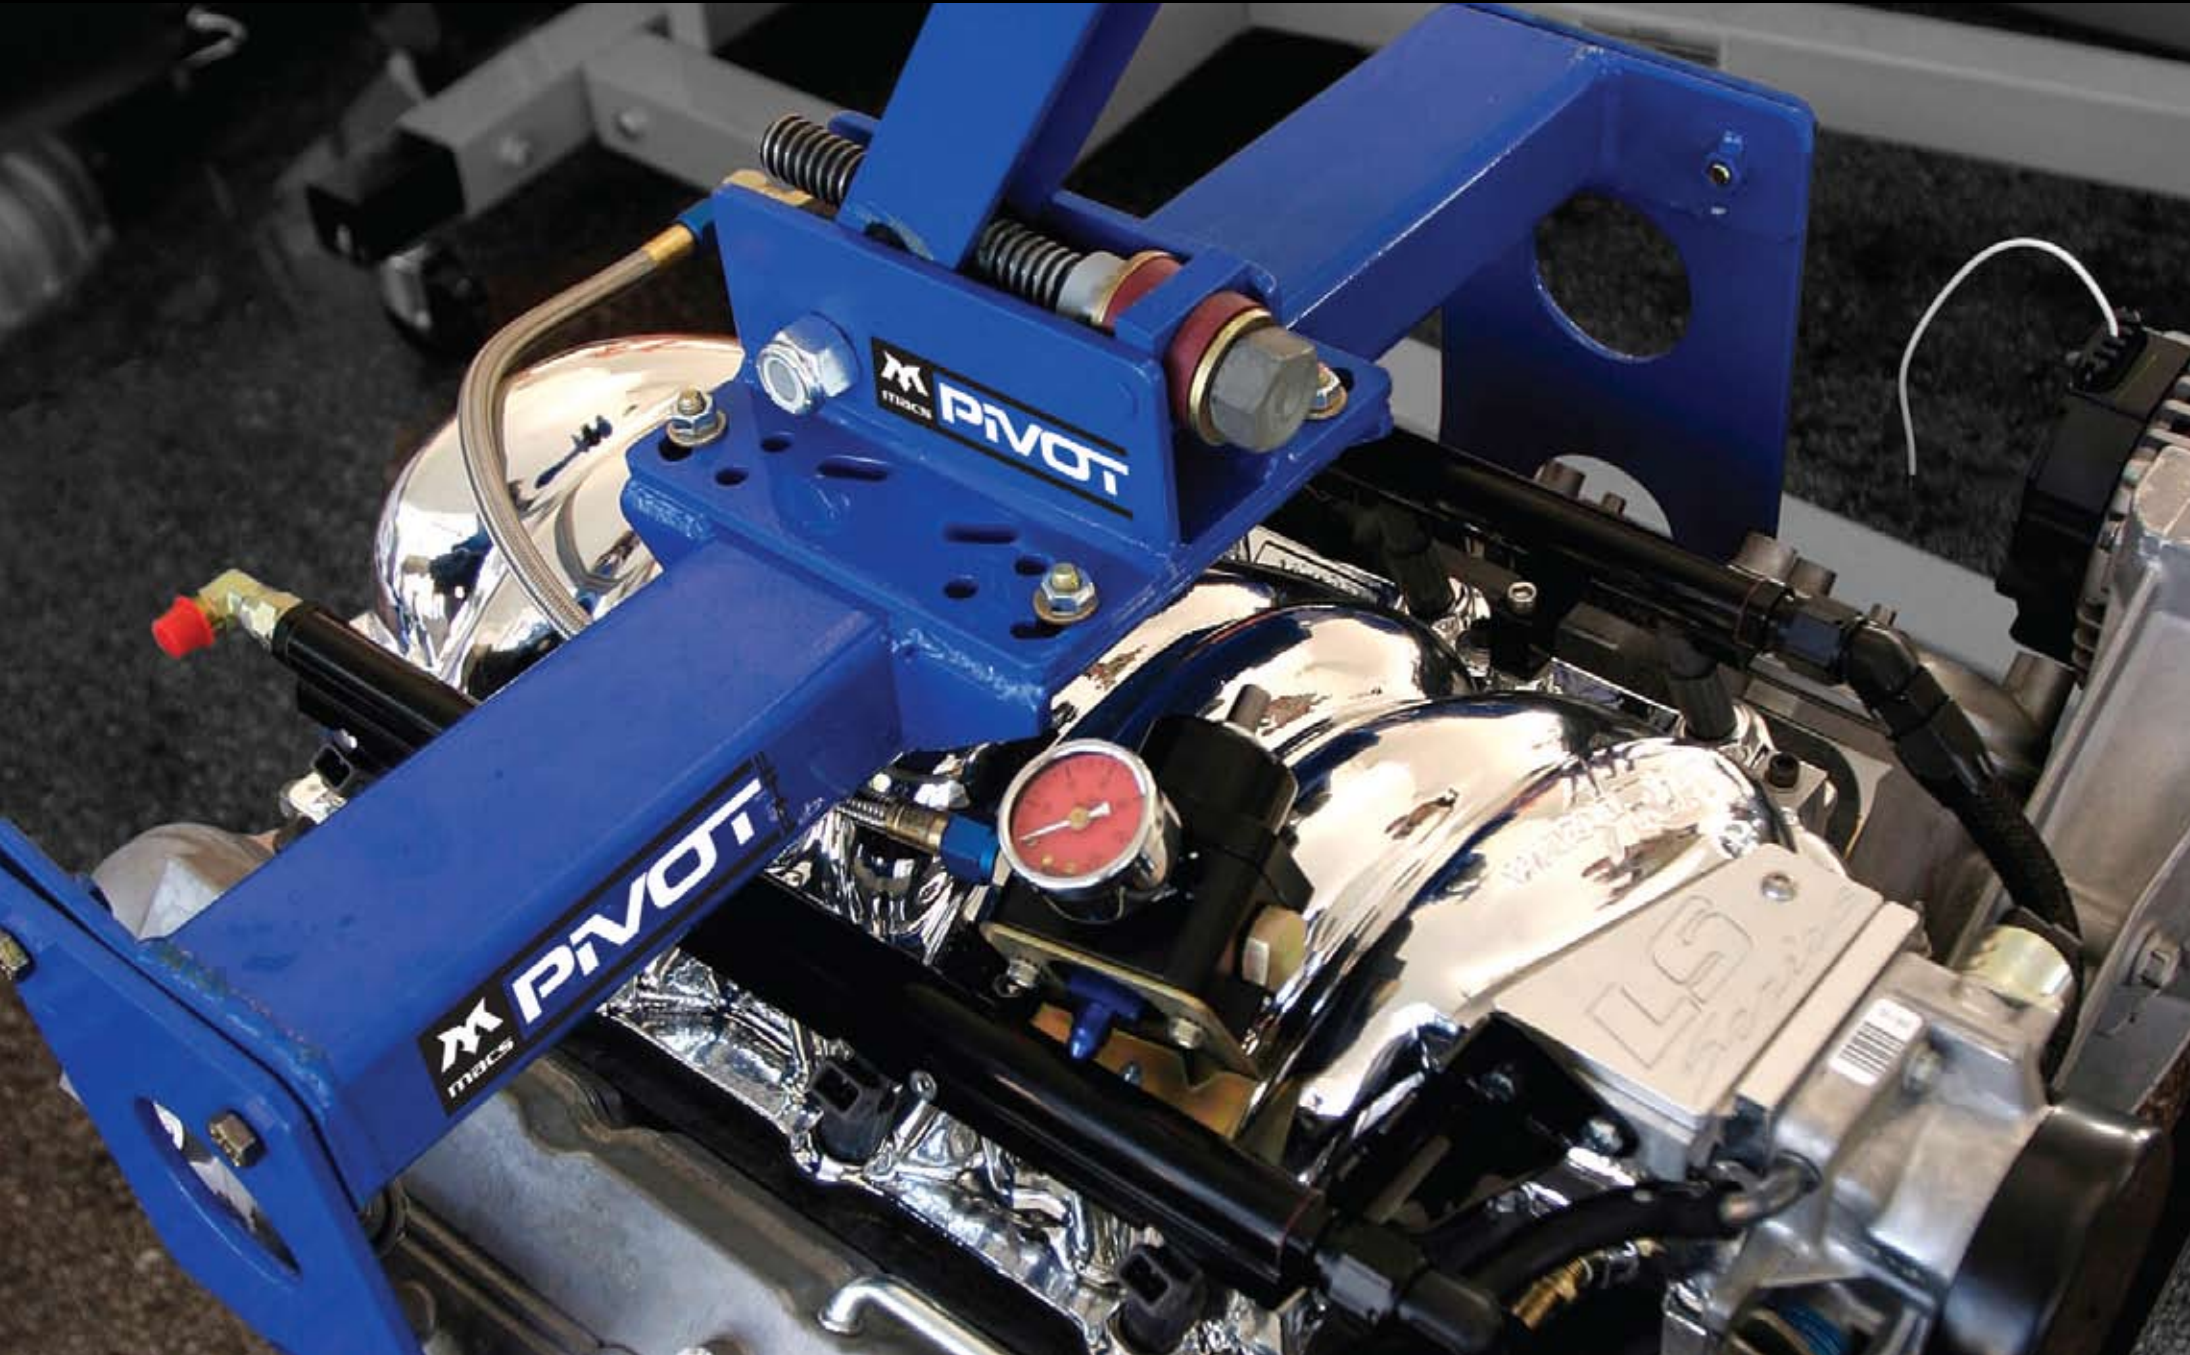

For example: To order a red 1" x 72" ratchet strap with a flat snap hook on the fixed end, and a flat snap hook on the running end (as shown above). The order number would be: 1-AR72MA

Note: Other hardware and webbing is available.

SPECIALTY GEAR

IT WAS QUICK AND STEADY THAT WON THE RACE

The new pivot from Mac's Tie-Downs allows the angle of the engine and trans to be easily adjusted while on the hoist to ease engine installation and removal of even the most unwieldy engine combinations. Thanks to their clever preparation, and the Mac's Pivot Plate, the Hot Rod Barn team completed the swap in just 35 minutes, from removal to running and driving. The beauty of the pivot is that you can control the engine and transmission with the turn of a ratchet, allowing the engine to glide right in.

MAC'S PIVOT

Removing and replacing engines can be a time-consuming process that risks damaging your perfect paint job. Save time, energy, and keep your paint and firewall flawless with Mac's Pivot, a rock solid articulating engine lift plate that tilts the engine and transmission up to 35 degrees with a few quick turns of a ratchet.

SPECIALTY GEAR

CHASSIS STABILIZER

Mac's Chassis Stabilizer is the perfect companion to most any tie-down system. Simply slide the deflated stabilizer under the chassis and inflate it. Inflated, the stabilizer will cushion the harsh effects of trailering.

CHASSIS STABILIZER INCLUDES

- 18" Chassis Stabilizer
- Hose Kit
- Gate Valve

WALL BRACKET

CHASSIS STABILIZER

Deflated height 1.75". Inflated height 10".

RECTANGULAR STABILIZER

Mac's Rectangular Stabilizer is designed for low clearance cars and for use with beaver tail trailers. It's sleek 1 1/8 inch height design allows it to slide under the lowest race cars. It is recommended for applications where the chassis is 1 1/8 inches to 3 inches from the trailer floor.

RECTANGULAR STABILIZER INCLUDES

- Rectangular Stabilizer
- Hose Kit
- Gate Valve

RECTANGULAR WALL BRACKET

L-SHAPED CHOCKS

PIT RAMP

FLOOR JACK CRADLE

WHEEL CRADLE

Mac's rubber wheel cradles keep everything in the same place, every time. They do an excellent job preventing wheel movement and augmenting tie-down straps.

- Clip
- Handle

FIRE EXTINGUISHER BRACKETS

Why bother having a fire extinguisher if you can't get to it in time to make a difference?

Now Mac's Custom Tie-Downs has a solution: the new Quick-Release Fire Extinguisher Bracket combines Mac's trademark rugged construction with the convenience of a quick-release pin and the ability to accommodate most standard hand-held extinguishers.

Like all Mac's products, the Quick Release Extinguisher Bracket is made in the USA, featuring CNC machined billet aluminum construction and stainless steel hardware. The bracket is available with tubular or flat panel mounts for use on roll bars, cages, floor pans or most anywhere within easy reach.

TUBULAR MOUNT

TRAIL D-VISE

Now even better. Mac's has improved this great product by adding pipe jaws, an integrated handle and a convenient bottle opener. In addition rock-crusher tough "Slip-Not"™ material is used for jaw faces. The new cross drilling allows the Vise to rotate on 90° increments.

- Fits any standard 2" x 2" receiver tube/trailer hitch
- Opens to more than 8" - Wide enough to press most U-joints
- "Slip-Not"™ material for main jaws, plus triple pipe jaws for the ultimate grip

Mac's Trail D-Vise make those remote repairs easier and more effective. Simply slide the D-Vise into your receiver, pin it and you have a stout vise in the middle of nowhere!

The Trail D-Vise gives you workbench vise capabilities right off the back of your vehicle. Use for fabrication, repair, welding, cutting, pressing, straightening and more!

SPECIALTY GEAR

JEEP® BOX INCLUDES

- Integral Locking Floor Cover
- Moveable Dividers
- Versatite Tie-Down Track
- Removable Tie-Down Fittings
- Sliding Drawer Cover

FULL HEIGHT MOVEABLE DIVIDERS

ALUMINUM HINGE POINT

MITERED CORNERS ON VT TRACK

JEEP® BOX

Rugged all-aluminum construction, OEM quality fit and finish. Lightweight and customizable, stow cargo out of the elements and away from thieves. Drawer lid makes perfect work table for food prep while camping.

The Mac's Jeep Box is easily installed behind the rear seats in any 2007+ Jeep Wrangler 4-door. The factory floor storage wells are still accessible due to the Jeep Box's innovative tilting design. Lightweight powdercoated aluminum construction allows the Jeep Box to include a fully locking drawer and a separate lock to keep the unit itself safely secured in the back of the Jeep. The factory floor cover is replaced with an aluminum integral floor that is part of the box for maximum security and durability.

To offer double protection against the elements, the interior drawer features a gasket on all sides, so rain and mud will all stay on the outside, where it belongs. The Mac's Jeep Box utilizes the factory rear seat bolt holes for mounting, but does not require the removal of the rear seats. Every Jeep Box comes standard with an integral locking floor cover, moveable dividers for modular interior space, Mac's famous VersaTie tie-down track, removable fittings for even more gear space and a sliding drawer cover to offer more flat work surface.

The Jeep Box also features an exclusive pivot mount that allows you to swing the entire unit up and forward, out of the way in case you need access to the factory storage wells. The entire storage system, from mounting plate to powdercoated drawer unit can be installed in 15 minutes without any drilling, allowing for easy removal if desired.

CANOPY PARTS

AUTOMATIC LATCHING RAFTER END

Mac's aluminum rafter ends eliminate the hardest part of canopy frame manufacturing. The automatic latching mechanism allows the rafter to positively connect to the padeye without requiring the end user to climb the trailer. This can be a terrific selling point when your padeyes are mounted 14' up. With our parts, you can erect and dismantle the canopy frame while standing on the ground.

RAFTER END 2" X 2"

Rafter end designed to fit 2" x 2" x .125" tubing with internal cable routing.

RAFTER END

2" x 2" 632201

2" x 3" 632301

GUSSETED PADEYE

2" x 4" 471002

RAFTER END 2" X 3"

Rafter end designed to fit 2" x 3" x .125" tubing with internal cable routing.

GUSSETED PADEYE 2" X 4"

Mac's padeyes feature fully stainless steel construction. Each unit is expertly T.I.G. welded, then electropolished and passivated sealed for maximum corrosion resistance.
