HYUNDAI/KIA

HARNES 1999-2008

CAUTION REGARDING

BLUE/WHITE WIRE

DO NOT CONNECT THE BLUE/WHITE WIRE

WHEN IN NON-AMPLIFIED VEHICLES

2007-2008 Hyundai Tiburon without amplified systems uses the wire in the position of Metra's **blue/white wire** for a vehicle speed pulse signal. All other applications, including amplified Tiburon's, will use this pin location as suggested normally for amplifier turn-on and can be connected to the aftermarket radio's remote output.
