

U.S./ASIAN CAP ADAPTER KIT  
MODEL MVA4610

USER'S MANUAL

---

## Applications

MVA4610 includes four (4) cooling system cap test adapters designed for use with Mityvac cooling system pressure test equipment. The adapters are intended for testing the proper function of the cooling system pressure caps on most US and Asian manufactured cars and light trucks. Refer to the user manual included with your cooling system test equipment for specific procedures on the application of these adapters. Refer to the Adapter Selection Guide included in the kit for more information on adapters.

## Precautions

Performing cooling system tests using this equipment is simple and straightforward if you follow the instructions. However, always keep in mind that you are working with a system that may be full of cold or hot fluid that is under pressure and just waiting to be expelled. If you are testing an engine that is hot and/or pressurized, always stop to think before pressing the relief valve, removing a cap, or disconnecting a hose or other component.

Always read carefully and understand instructions prior to using this equipment.

Always wear eye protection when removing radiator or coolant bottle cap, or when performing any cooling system test.

Never remove the radiator or coolant bottle cap, or attempt to pressurize the cooling system of a vehicle that is overheated.

Always allow system to cool prior to attempting to perform any cooling system related test procedure.
