

AR-S AMERICAN RUNNER STAINLESS RUNNING BOARD

Part #: 128075S VEHICLE BRACKET CONFIGURATION (03/2009)

USE BRACKETS#1,2,3 FOR:

CHEVY

02-06 Avalanche (w/ body cladding)

USE BRACKETS # 1,2,4,5 FOR:

BMW

00-06 X5 *Installation tips: Trimming plastic panel on driver side rear is necessary in order to install brackets. Prepare to cut 2pcs bracket#4 into 3 pieces each for later use.

Use bracket #1,2,5 and two pcs of the cut bracket #4 for the driver side front. Start with the driver side front. Cut 2 1/2" off from the bracket #2 for clearance. Align and mount 2 pieces of the cut bracket #4 to the bottom of the floor to create mounting point. Connect bracket #5 to the bracket #4 mounting point. Loosely attach bracket #2 to bracket #4 and #5. See picture. Repeat procedure on the passenger side front.

Use bracket #1,2,5 and one pc of the cut bracket #4 for the driver side center. Align and mount the cut bracket #4 to the bottom of the floor to create mounting point. Connect bracket #5 to the bracket #4 mounting point. Loosely attach and mount bracket #2 to the bottom floor vertical wall and connect to bracket #5. See picture. Repeat procedure on the passenger side center.

Use bracket #1,2,4,5 and one pc of the cut bracket #4 for the driver side rear.
 Align and mount the cut bracket #4 to the bottom of the floor to create mounting point.
 Remove under seal panel strip to get access to the cross member of the floor. See pictures.
 Locate 2 vertical holes on the cross member, attach and secure bracket #4 for mounting point extension.
 Connect bracket #5 to the mounting point.
 Loosely attach and mount bracket #2 to the mounting point extension and connect to bracket #5. See picture.

*Make sure to reinstall under seal panel strip by trimming the panel to clear the brackets..

Use bracket #1,2,5 and the cut bracket #4 for the passenger side rear.
 Align and mount cut bracket #4 to the bottom of the floor to create mounting point.
 Connect bracket #5 to the mounting point.
 Loosely attach and mount bracket #2 to the bottom floor vertical wall and connect to bracket #5.
 Trim plastic panel for clearance. See picture.

Finally, adjust running board to the desired position and secure all nuts and bolts.
