

Transfer Tanker Family

The best transfer tanker just got better! Introducing the new low-profile transfer tanker family from OTC – in both electric and pneumatic pumps.

Handles Drained Oil Without Spilling a Drop!

- Draining oil from a large displacement engine and getting it to your bulk storage container is a snap with OTC's Transfer Tanker on your team.
- Used oil is collected in a reservoir, which rolls smoothly on 4", free-wheeling casters to your storage location.
- Pump moves five gallons a minute through the 8-foot transfer hose.
- Can also be used for transferring antifreeze.
- Handle is removable for easy storage.
- Screen attached to reservoir allows Transfer Tanker to be stored on its side when empty.

No. 5097 with a 15-gallon reservoir.
