When you're looking for a quick deploying one-man operation awning that gives you 53 square feet of shelter you came to the right place. Our covers are manufactured out of 280G poly cotton rip stop material that has heat sealed seams which ensure you're not going to see any leaks through seams regardless of the size of rain you're dealing with. When its time to lock down base camp for serious weather, deploy the poles, secure the stakes with the supplied para-cord and put up the optional enclosure shelter and your ready to take on some the most severe storms. When its time to stow your Nomadic 6.0 away it takes minutes to break down and secures nicely in 1000g PVC cover.
