

# CAR TRANSMISSION FILTERS

*Premium Guard Filters* improve transmission performance by protecting sensitive shift control valves. Normal wear and tear can create metal shaving and other fibrous materials that can cause part failure. All our transmission filters are offered with fully packaged complete kits – filter and pan gasket. We utilize high-quality rubber gaskets with fitted screw holes for easy installation, also known as a “third hand”.

When it comes to quality performance transmission parts, Premium Guard is the brand you can depend on.
