ALUMINUM TOWER & COLLAR | Aluminum is a natural heat sink so your LED lights are going to stay even cooler. The key to longevity is keeping the LED cool.

CLOCKABLE | Will allow you to adjust the light beam per application and/or light housing

ANTI-FLICKER KIT | Eliminates flickering, dashboard warning lights and other vehicle electrical system complications. It is compatible with can buss systems. Not needed for every vehicle application. Primarily needed with Mopar and Chrysler applications.

LUMEN OUTPUT | The higher the lumen, the brighter the bulb.

COPPER WEAVE CLOTH HEAT SINK | Eliminates the fan or fan style heat sink which can be restrictive and open to debris and moisture. If your heat sink fails, your LED lights will burn out. The copper weave heat sink is patented to Putco.

28-SERIES VS. 30-SERIES | The Silver-Lux 28-Series is the exact same light as the 30-Series. The difference is the 28-Series includes the Anti-Flicker Kit. The most popular bulb type needing the anti-flicker kit is the H13 and 9012.

SILVER-LUX PRO | Replacement LED headlight bulbs made specifically for headlamps with projector lenses. Fits both OE and aftermarket projector lenses.
