Quake™

Quake™ LED

LIGHT UP THE DARKNESS

QUAKE
LED
™

OUR STORY...

Since 2013, Quake LED has been leading the LED lighting industry with the latest in
Off-road, Agriculture, Fleet ,Towing and work lighting technology at straight from the factory prices.

With our revolutionary LED lighting designs, Quake LED is changing the way you see fast approaching nighttime terrain.
Our LED light bars offer four types of lighting patterns; Spot, Super Spot, Flood, or Combo style beam patterns, giving you unlimited
options of lighting that can fit your needs.

Our LED work lights come in a variety of shapes and sizes, giving you powerful light in just about any space your vehicle has available. We offer a
complete line of lighting solutions for pre-runners, trucks, rock crawlers, UTVs, side by sides, buggies, ATVs, MX, street bikes, sand-rails, snowmobiles,
tractors, combines, tow trucks, fleet vehicles, semi trucks, and other vehicle applications where you need to turn the darkness into daylight.

WE ARE NOT JUST AN OFF-ROAD COMPANY...

Quake LED does not sell or manufacture Cake Stands, Smart Balance Hoverboards, or even HID lighting like some of
our competitors. Quake LED is owned and operated by people who off-road. We design, manufacture, test and personally use
our products almost every weekend, in the toughest conditions, on our own personal off-road vehicles. We know what
our customers want and have the real world experience and engineering background to meet your needs.

Our innovative thinking combined with customer feedback and our off-road experience allows us to be on the cutting edge of off-road,
agriculture, and work light technology, continuing to lead the way in product design and functionality that only Quake LED can provide.

No matter the application, all Quake LED products are specifically developed for superior projection. Quake LED is, hands down,
the brightest option. With amazing optical technology on your side, Quake LED offers the best choice for your application.

LIGHT UP THE DARKNESS

> **"** I like **Quake** because every one of my customers can afford to outfit their ride with **high quality** lights without going broke **"**
>
> — *Rick Thomson* —

> **"** Price + light output + quality + an **American** company = You can't go wrong with Quake LED **"**
>
> — *Art* —

> **"** Quake LED has all out the **Lights** needs like one stop shopping and their staff has been very **supportive** to us with technical questions and warranty or exchanges **"**
>
> — *Emily Van Dyck* —

> **"** So happy to finally find a LED light manufacturer who can be **consistent** and provide us with high quality LED lights & the parts we need **on time** for our production **"**
>
> — *Trevor Adams* —

> **"** How the heck did we take 9 months to develop our **JL Headlights, JL Fog Lights** and still beat EVERYONE to market? **"**
>

MANUFACTURER
PRODUCT QUALITY IS PRIORITY #1 AT QUAKE LED!

We would be just as bummed as you if any product failed in its line of duty. We are just as dependent on our LED lights as you are. Thus we are proud to design, test and assemble in our very own German TÜV approved facility. German TÜV quality in many circumstances exceeds ISO factory standards. The TÜV corporation certifies production for many of the best products in this world. On top of this unusually high standard, our facility is audited every 2 months to ensure our product and facility are of the same quality as any top manufacturer! Try saying that about those mass-produced, el cheapo light bars on the internet. You get what you pay for.

Every part that comes thru our factory doors is checked multiple times to ensure the product functions as intended. Printed Circuit Boards (often called PCB) are the heart of a LED product. Before any PCB is assembled into a lightbar, it is checked. After the reflectors are screwed in, the PCB is turned on. Every Light is aged 12 hours, before the optic glass is placed. Every light is tested to ensure no water or dust can penetrate and destroy product integrity. Our lighting integrates advanced thermal management with short circuit and open circuit protection and advanced innovative features that no other manufacturer is producing. Quake LED's history, experience and creativity brings you a brand that stands out among the competitors with support and warranty to back it up.

Our Lights are guaranteed to outlast a Zombie Apocalypse and we back all of our products with a 1-Year Limited Warranty.

LUMENS AND WATTS

Understanding Lumen Count is pretty easy. Lumens are the most accurate way to measure the amount of visible light produced from any lighting device. The higher the Lumen rating, the brighter the light beam will be. Lumens = Brightness.

Total Wattage is the amount of energy required to produce a projected light from a lighting device. Diode Wattage is the amount of energy required to light one diode. For example, if you have 100 Diodes in your light bar and each Diode is 3 Watts, then your total Wattage is 300 Watts. Some LED Diodes are designed for higher power output than others. Quake LED uses 3 Watt, 4 Watt, 5 Watt and 10 Watt CREE or EPISTAR Diodes in our LED lights. When comparing one LED product to another, be sure to check Diode Wattage, Total Wattage and the amount of Lumens it produces. This will give you a general idea of how it will perform.

BEAM PATTERNS

Light emitted from an LED bulb requires a Reflector in order to project the light from its source into a certain beam pattern. Quake LED offers the following patterns: SPOT, SUPER SPOT, FLOOD, and COMBO. The difference between these patterns is the reflector design. The angle of the reflector directly affects the distance of the light projection and the width of the beam pattern. Smaller Angle = Long Distance/Narrow Beam. Bigger Angle = Short Distance/Wide Beam. Choose a beam which best suits your needs.

- SPOT -
Spot reflectors contour the beam pattern at a 10-degree angle so the light is projected farther but offers a narrow beam pattern. A Spot is designed to throw light farther ahead of you.

Spot Beam

- SUPER SPOT -
Super Spot reflectors contour the beam pattern at a 8-degree angle so the light is projected farther than a regular Spot and offers our most narrow beam pattern. With a Super Spot, you will see furthest possible.

Super Spot Beam

- FLOOD -
Flood reflectors contour the beam pattern at a 40-degree angle so the light is reflected at a wider beam pattern but does not project as far. With a Flood you can see far out on both sides of your vehicle.

Flood Beam

- COMBO -
Combination (combo) light bars are also available in which the light bar is designed to use SPOT reflectors in the center and FLOOD reflectors on outside. The driver can now see both straight ahead and on both sides of your vehicle.

Combo Beam
LED COOLING

All Quake LED lights are rated to perform in temperatures ranging from -40^0 to +140^{0}F.
Excessive heat and LED diodes are not best friends! Heat is one of the quickest ways to burn out your LED lights. Quake LED combats this situation by utilizing oversized heat sink areas to maximize cooling. Quake PCBs use heat reduction paint to encourage heat to transfer to the heat sinks rather than to the diodes. Other factories use thinner coverings which allows heat to conduct on the diode side. Quake LED uses DOW Corning heat reduction thermal paste to further reduce PCB temperatures. No CHEAP thermal paste here! Higher wattage models utilize military style breather valves or breather gaskets that release internal hot air out while preventing water from entering. These and other heat reducing innovations result in worry free lighting.

COLOR TEMPERATURE

Color Temperature is the color of light projected. It is measured in degrees of Kelvin (K) on a scale from 1,000K to 10,000K. The typical range is from 2000K to 6500K.
Quake LED uses the industry standard of 6000K in all of our LED Lights.
6000K emits a pure white light. Drivers perceive it as a clean, brighter light.

| 2000-3000K | 3100-4500K | 4600-6500K |

ILLUMINATING BEYOND TOMORROW

Many LED brands that mostly sell on those ginormous websites have one objective in mind: Profit. They lower production process standards,use lower quality PCB components, use lower adhesion epoxies, lower the amount of testing hours or skip testing altogether. Not to mention they are now ALL using FAKE CREE, Osram, Nichia and Samsung diodes that are nowhere near the advertised wattage values or quality. Many marketing sites such as Amazon and Ebay do not verify any seller's specs and photos allowing other manufacturers to only be accountable for 3-month life expectancy as the buyer cannot leave negative feedback or get any type of warranty. Below are a few points that seperate Quake LED from other brands.

- Innovative ideas such as controlling RGB Accent, multiple ways in each product
- Testing, recording and archiving 100% of every A/B epoxy batch, every 15pcs
- Optic lenses are injected with high quality UV inhibitors to reduce yellowing effect
- Quake LED uses Korean and Japanese made PCB solder curing ovens
- Higher quality, UL-approved wires. (Many of our competitor's wires do not pass UL)
- Every product is aged and tested multiple times during all production phases

- Quake LED only uses high quality Stainless Steel mounting hardware
- Diecast parts are throughly cleaned and acid dipped before powder coating process
- All plastic and aluminum components are injected with new, raw material
- All wires are twisted and solder tinned, instead of unsightly bare and untwisted wires
- All finished Quake LED PCB's are inspected by a Computer Aided Optic Inspection
- All Quake LED lights are manufactured in our own TÜV certified factory

QUAKE LED ™

WHAT'S THE DIFFERENCE?

Today, consumers are bombarded with many LED Light Bar and LED Work Light options. Not only do most of them look the same from the outside, but they also claim to have the exact same Lumen output, Diode Wattage, and overall performance in general. Crack it open and it's a whole different story! Take note of how inferior, mass-produced light bars (that have flooded online markets) differ from our high standard of quality. We hear from people every day who have purchased LED Lights on Amazon and eBay that their purchased product wasn't what it was supposed to be. Check out the following photos and see if you can tell the difference. For every Action there is a Reaction. DON'T be FOOLED...

ACTION

- Reduce PCB material thickness in order to Lower PCB Cost
- Reduce Heat Sink material thickness in order to Lower Manufacturing Cost
- Use cheaper, production friendly Thermal Reduction Paste in order to Lower Cost
- Use 0.75 Watts Diodes instead of 3 Watts Diodes in order to Lower PCB Cost
- Use lower quality PCB components in order to Lower PCB Cost
- Use production friendly RTV Epoxy rather than stronger A/B Epoxy to Lower Cost

REACTION

- Increased PCB heat and pre-mature LED Diode failure
- Lowers the ability of heat dissipation, leading to pre-mature PCB/Diode failure
- Lowers the ability of heat dissipation, leading to pre-mature PCB/Diode failure
- Besides mis-representing, it's a much lower Lumen output than advertised
- Unstable components that result in a shorter than expected operating lifetime
- Allows water to enter inside and increases chance of wire pulling out

QUAKE™ LED

Can't find the perfect LED Light Bar design? Want to customize your own light bar with different wattage PODS? Want to light the sides of the trails more? Look no further than our new Light Bridge Series! Pick and choose from Quake LED's extensive line of Light Bars, Work Lights or PODS to design and build that lighting combination you have always wanted. Now you can mount a 22" lightbar with cubes on either side, or fifteen 3" cubes on a 52" Light Bridge. Add the side perches and you can install two more cubes! Seventeen cubes on a 52" light bar—insane, right? And that's just the beginning. If you choose our RGB Accent PODS or Accent Light bars and connect them to our Quad-Lock Pro. Now your Light Bridge has added turn signals, courtesy lights & more! The combinations are endless and totally in your control. We told you it was insane! Look for the Light Bridge icon on the right to ensure it will mount.

Expect more control of your LED lights with Quake LED's new Command Series Controllers. Have you ever thought about increasing your vehicle safety by adding more Brake Lights, Turn Signals or Hazards to warn others of danger ahead? How about wishing your vehicle had a bright White Courtesy light while unlocking the door or locating your vehicle in a parking lot at night? Tired of using multiple remote controls instead of one for all your different RGB Accent Lights? What about quickly installing up to 8 LED lights? Not easy, right? Easily connect eight lights to our simple, 60A/12VDC controller with one screwdriver and leave the dirty wiring fabrication to us. Pick and choose from our family of LED Lights and look for Quake LED lights that are Plug and Play with our Quake Interlock and Quake Quad-Lock Pro controllers. Look for these icons to quickly find what you are looking for and build that show winning vehicle you have always dreamed of!

QUAKE QUAD-LOCK PRO

Quake Quad-Lock Pro is a powerful, multi-zone controller that connects to any Quake LED RGB Accent Light or RGB Rock Light and transforms otherwise road-illegal accent lights into road-legal Turn Signals, Hazards, Brake Lights, Amber DRL and White Courtesy while retaining its original, off-road RGB accent features.

QUAKE INTERLOCK

Quake Interlock is our dual zone controller that transforms any Quake LED RGB Accent light into Amber DRL, Turn Signals, Hazards and White Courtesy lights.

TXS turn signal lighting technology

1st TO MARKET

TXS Light Bar Technology transforms your RGB Accent light bar into dual RGB zones which allows the adaptation of left and right turn signals into your otherwise single zone accent light bar. Look for light bars that have TXS Technology if you wish to add light bar turn signals.
