

MUSTANG 74-78 SHIFT BOOT INSTALLATION INSTRUCTIONS

1. Our boot comes equipped with hook and loop fastener . Superglue the mating hook and loop fastener strips to the inside of the center console.

2. Remove the shift knob. Sincly unscrew it. Slide the boot on the shifter thin-end rst and secure the top with a zip-tie.

3. At this point you can just lower the bottom of the boot on the console and complete the installation. Since edges of hook and loop fastener might be visible, we recommend creating a simple wire frame (coat hangers, such as used by drycleaners, have the perfect girth wire for this) that can be slid into the boot to push it's corners slightly out above the center console and thus hide the edges of the hook and loop fastener strips. This is a minor cosmetic upgrade for those with great attention to detail.

4. Install the boot using hook and loop fastener and ENJOY! :)

ENJOY YOUR NEW LEATHER BOOTS!

Useful tip

You have installed a product made out of genuine leather. As you know, to maintain a leather product in good condition, you should take care of it. We suggest occasionally (every 4-6 week for example) applying some leather conditioner/UV protector to keep your leather from drying up in the sun and cracking.
