## Pre-assembly Guidelines

**Please read and follow the instructions before assembling the bed cover.**

Keep the boxes and packaging until the installation is complete. Unpack carefully to prevent scratching. DO NOT remove any protective films from the cover and canister until after the installation is complete. DO NOT USE A LUBRICANT OR LOCTITE BRAND PRODUCTS ON THE ROLLING COVER. USE OF THESE WILL VOID THE WARRANTY.

See the Maintenance page for proper care.

### Parts check list for rail box

- Driver Side Rail
- Passenger Side Rail
- Clamp Box

### Parts check list for large box

- Instruction packet
- Cover rolled into canister-spiral assembly
- Front cover for canister
- Keys
- Drain tubes (2)

### Clamp Box

- Clamps (4) (6 for 8" bed)
- Front Cover Mounting Screws (2)
- Canister Mounting Screws (4)
- Allen Wrenches- 1/8" and 6mm

### Tools Required

- #2 Philips Screwdriver
- 9/16" or 1/2" Wrench (ratchet preferred)
- Pliers or locking pliers

## STEP 1: Remove Shipping Materials

Remove the screws and shipping brackets and the white shipping tubes from both sides.

Retain a shipping bracket for later use as a shim.

## STEP 2: Install the rails to the canister

**2a.** Pull cover out of the canister 6 to 8 inches, holding it from rolling back in, guide the cover into the rail channel while positioning the rails into the canister spirals. Align the front and rear rail attachment tabs and holes to the inside of the corresponding canister holes.

**2b.** With the rails in place and the cover slid into the rail channel, attach the rails with the four 10-32 x 7/16" mounting screws.

## STEP 3: Install the front cover

Slide the front cover under the rails, attaching it with the two 10-24 x 3/4" screws and the Allen wrench. The front cover attaches through the top of the rail.

## STEP 4: Position the cover assembly onto the truck and position the rails.

NOTE: Prior to installing the cover, some drop-in style bed liners may need to be notched in the front/cab end corners to provide clearance for the cover canister.

Approximately 3" wide x 10" deep

Also ensure that protrusions or logos in the drop-in liner do not interfere with the cover's operation.

**4a.** With two people, lift the cover and place it onto the truck bed starting with the bulkhead. The front seal of the cover should lay forward and lay flat.

**4b.** Move the cover back toward the tailgate and use the shipping bracket as a spacer to position both rails to be 1/8" from the tailgate.

NOTE: With the cover in place, the front seal lays flat, but must not extend past the bed rail cap. Trim the seal as needed to ensure it lays flat.

## STEP 5: Install the front and rear clamps

### STEP 5b: Install the front and rear clamps specific to the XR Trax Rail system - go to Page 6.

**5a.** Position the clamps between the leveling screws both front and back. Using a 9/16" or 1/2" wrench (depending on your clamps), tighten the clamps. It is important to push down on the rail while tightening, AND to tilt the rail up approximately 2 degrees simultaneously. Both the pushing down and tilting of the rail will position the rail best to minimize water intrusion.

## STEP 6: Measure and record the distance between the rails.

- 6a. Measure the distance at point A (on top of the front cover).
- 6b. Then measure the distance at points B & C (above each clamp). They must measure the  $\pm 1/16"$ , same as at point A.
- 6c. It is important the rails are parallel, if they are not proceed to step 7. If the measurements are correct, proceed to step 9.

## STEP 7: Adjust the distance between the rails.

Remove the clamp and turn the white adjustment screws with the 6mm Allen wrench to move the rails. one complete turn =  $1/16"$ . Turn both screws.

If the rails measured to be too close together, turn the screws counter clockwise.

If the rails measured to be too far apart, turn the screws clockwise.

When properly adjusted, replace the clamp as in step 5.

## STEP 8: Check for proper fit between the front cover and the rolling cover.

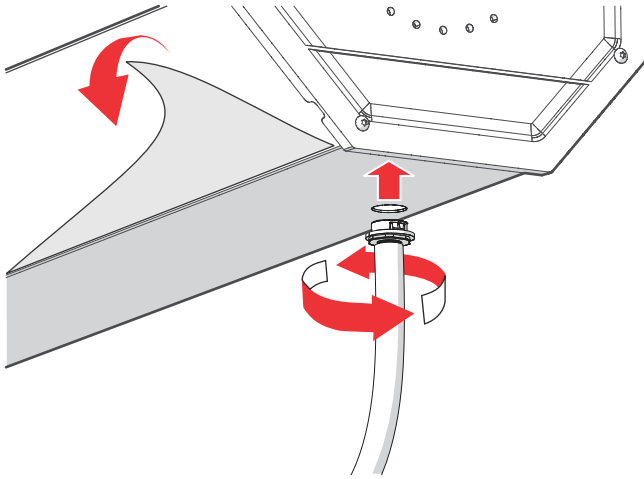

With the cover closed and latched, if there is less weatherstrip exposed on one side versus the other then adjust that rail more forward and toward the cab. Loosen the claps and move the rail. Check again for equal spacing, adjust as necessary then tighten all the clamps per step 5.

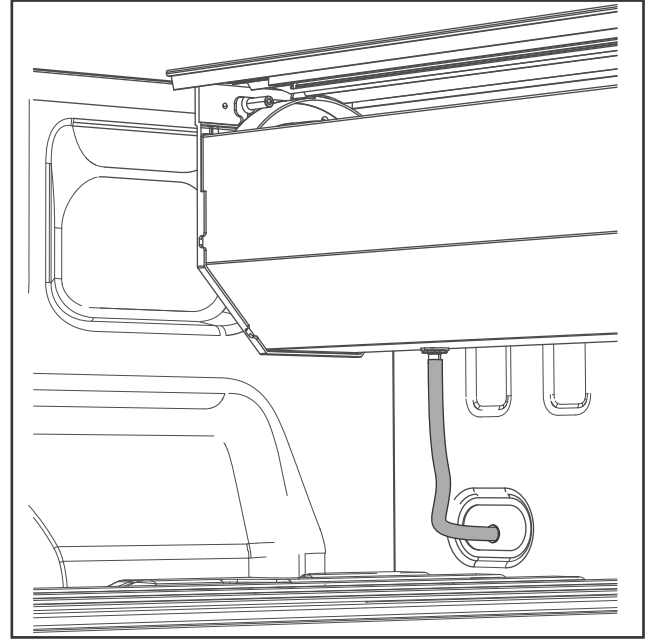

## STEP 9: Remove the protective film & assemble and install the drain tubes.

**9A-** Remove all of the protective plastic film from the canister.

**9B-** Insert the drain tube into the canister on both sides, rotate to the right, clockwise, the fitting will click twice when secure.

**9C-** Generally the drain tubes will be routed out through a hole drilled in the factory bed plug. Otherwise a suitable existing hole must be utilized. Or a new hole can be drilled taking great caution to be aware of lines and anything behind where the hole is drilled.

## Final notes

- Open and close the cover to ensure that it is rolling without rubbing or binding.
- Open and close the tailgate to check for proper movement.
- On some models, a better fit with the tailgate may be obtained if the rear of the rails are adjusted slightly up or down.
- Remove all remaining protective plastic film.
- Recheck that all of the clamps are tight. ***Do this periodically throughout the use of the cover.***
- Check that the rails are level and spaced evenly, and adjust accordingly.

## STEP 5b: Install the front and rear Adjustable-back Rack System rail clamps

**5a.** The adjustable-back clamp is designed and tested for the extra loads for the retractable cover with the rail system. The adjustable-back clamps must be positioned correctly under the truck bed rail to properly carry the extra loads.

**5b.** The adjustable top jaw of the clamp must be tucked firmly to the top and inside corner of the sheet metal of truck bed rail.

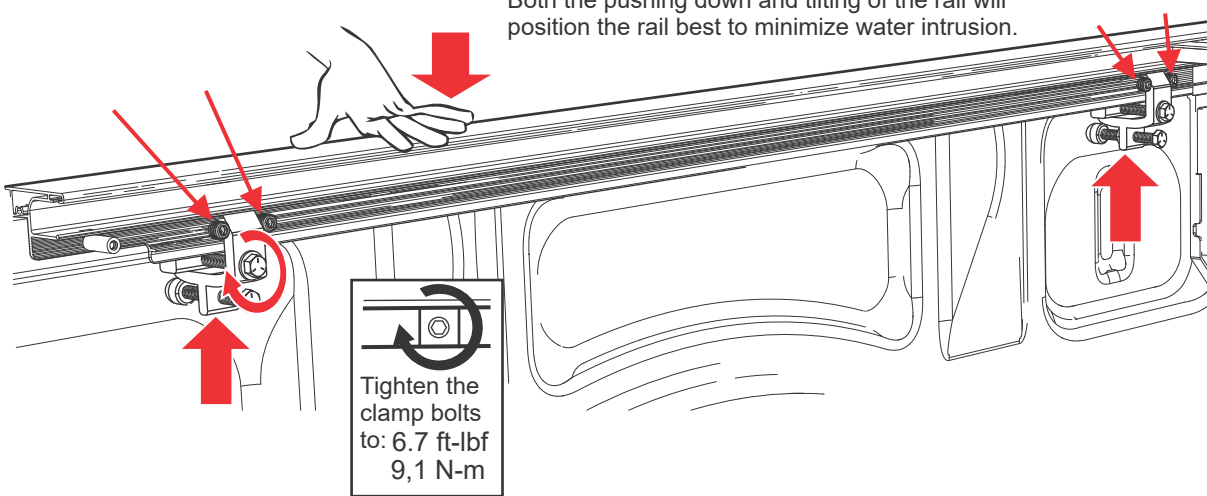

**5c.** If the jaw does not contact firmly into the corner of the bed flange, remove the clamp and loosen the screws to adjust the jaw.

Re-tighten screws and fully engage the lock washers. Always make sure the two sets of teeth are fully engaged.

**5d.** Replace the clamp between the adjustment screws and recheck to make sure the jaw seats firmly into the corner of the truck bed rail.

Position the clamps between the leveling screws both front and back. Using a 9/16" wrench, tighten the clamps. It is important to push down on the rail while tightening, AND to tilt the rail up approximately 2 degrees simultaneously. Both the pushing down and tilting of the rail will position the rail best to minimize water intrusion.

Tighten the clamp bolts to: 6.7 ft-lbf  
9,1 N-m

### 5e. Tightening the rail clamp stand-off bolt.

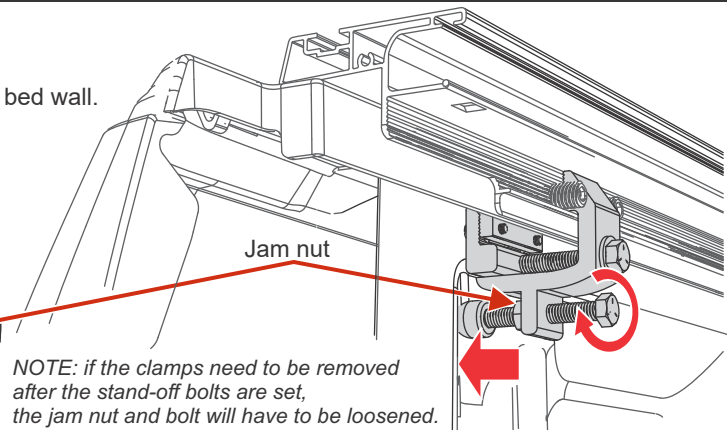

From Steps 6, 7 & 8 the rails are now adjusted to be even.

Loosen the jam nut, then tighten the stand-off bolt until it firmly contacts the truck bed wall. Do Not over torque the bolt.

Tighten the jam nuts to: 6.7 ft-lbf  
9,1 N-m

**NOTE:** if the clamps need to be removed after the stand-off bolts are set, the jam nut and bolt will have to be loosened.

**NOTE:** Due to variations in vehicle designs, the clamps may fit differently on your truck than on our test vehicles. Retrax is not responsible for cover-to-vehicle installations, nor is Retrax liable for damages resulting from attachment, installation, or use.

## Rack System Installation Information

### Truck Owners Manual

Be sure to refer to the truck owners manual for load ratings for the truck. When calculating weight of cargo, be sure to include occupants and the Retrax cover.

Retrax cover with rack system= 125lbs.

### Rack System

For installation instructions and load ratings for the rack system, refer to the rack system's manual.

### Caution

To prevent damage or loss of cargo when driving, check to make sure cross bars and cargo are securely fastened. Loading cargo on the roof rack will make the vehicle's center of gravity higher. Avoid high speeds, sudden starts, sharp turns, sudden braking or abrupt maneuvers; other wise it may result in a loss of control. If driving for a long distance, or on rough roads, or at high speeds, occasionally stop the vehicle and make sure the cargo remains in its place. Do not ever exceed the maximum vehicle capacity when loading the vehicle.

## Cover Use and Maintenance

The cover has superior quality rail weatherstrips seals. These seals help to minimize water intrusion into the truck bed. The initial break-in period for the rail weatherstrip is approximately 48 hours while in the fully closed position. Your cover may be slightly harder to open and close during this break-in period.

### USE

#### Opening and using the cover

To use your cover, open the lock cover and press the button at the center of the latch to pop open the handle.

#### Closing and locking the cover

To latch your cover anywhere along the rail, push down firmly on the end of the lock handle. Insert the key and turn until it is locked or unlocked.

#### Securing loose cargo

Retractable covers help in transporting loose and large cargo, a unique feature that most tonneaus cannot claim.

To help secure any item too big to fit under the cover, latch the lock handle shut against the item to help keep it in place.

### MAINTENANCE & CARE

#### Cleaning and caring for your cover.

You can wash your cover, but do not use any cleaners, protectants or strong chemicals.

The cover should be cleaned with mild soap and water. Do not allow gasoline to come in contact with the cover.

Carnauba wax is fine on your Retrax cover, however, DO NOT wax the ONE MX, PRO MX or XR Series (matte) covers!! To restore the luster to aluminum parts, periodically use a polishing compound followed by a non-abrasive Carnauba wax.

The weather striping may absorb soapy residue from a car wash, it is recommended to wipe down the inside of the rails from time to time.

#### **IMPORTANT: NEVER spray any lubricant or cleaner in the rails. THIS WILL VOID THE WARRANTY.**

The bearings are sealed and will not need any lubricant or spray. If the rails feel sticky, run paraffin wax along the rail.

**IMPORTANT:** Follow these instructions **BEFORE** installing the **RETRAX** cover.

Use caution when cutting the wire ties holding the wire harness together so you do not cut wires. Inspect wiring. Do not install damaged wires as they could become a hazard.

Split wire loom	A
Fuse holder	B
(2) - 10 Amp fuses	C
Wire harness	D
(10) wire ties	E
Electronics	F
LED lamp	G
(2) Key fobs - transmitters	H
Electric cover accessory packet	I

**Electric Cover Accessory Packet**

**Driver Side Spiral Canister**

**STEP 1-3: Routing wiring harness from battery to truck bed**

1. Using a Wire tie, secure the fuse holder end of the wire harness near the battery (red wire and brown wire) **Note: Do not connect the wiring harness to your battery yet.**
2. Route the wire harness to the driver side of the truck if it is not already. (Using wire ties, secure the wiring harness so it does not come into contact with moving parts or exhaust pipes.)
3. Route the wiring harness down along the frame rails to the truck box as shown on the right. Keep the wires as possible to prevent damage while driving. Secure the wiring harness with wire ties every 2-3 feet.

**Wiring Harness Routing Along Frame Rail**

**OPTION 1:** Route 24" of wire to driver side cab end of drain holes in the bed. Use split wire loom to wrap around the wires as a barrier between the wires and the drain tube hole. (NOTE: this may require a larger hole than normal.)

**OPTION 2:** Route the wiring in the gap between the cab and truck bed (leave about 24" in truck bed). The wires will be hidden under the front weather-stripping of the **RETRAX** cover.

← Proceed with the *RETRAX* standard instructions steps 1-8. Then refer back → to this page for connection wiring. *Disregard all references to 'lock'- Not applicable for POWERTRAX.*

**NOTE:** The electric cover has no lock assembly. Cover will not move out of the canister at this point of installation.

**STEP 5: Connect the wiring harness to electronics box and battery**

A. There is a white label wrapped with “Power” on it to ensure proper connections are made. (Ensure the connectors are securely connected. (Connectors labeled “Motor” will come attached.)

B. Connect the wires to the battery and install a fuse in the fuse holder. The **RED** wire (with the fuse holder) to the **POSITIVE** post, and the **BROWN** wire will connect to the **NEGATIVE** post.

For proper cover operation, ensure rails are positioned correctly (must be parallel). See step 6 & 7 in standard instructions).

These surfaces must be level

**Operation of the POWERTRAX**

**NOTE:** The *RETRAX* cover has superior quality rail weather-strip seals. The weather-strip seals will have an initial 48 hour break in period. Please inform the end user to help the cover to the tailgate each time the cover is opened for the first 48 hours or until it is able to close completely on its own.

*This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.*

**Check the parts shown here, this model has different requirements than the standard parts.**

**Continue with standard instructions through step 3 (pg. 2), then return  back to this guide on how to install the mounting hardware.**

(6) 5/16-8 x 1" bolts	A
(6) 5/16" lock washers	B
(6) mounting blocks	C
(6) 1/4" flat washers	D
(6) 1/4-28 x 1" bolts	E
(6) t-slot nuts	F
0.050" spacers (optional for step 7)	G

## STEP 1: Measure and mark the top of the factory track for mounting block locations

Make a mark at the 3 spots shown below.

**Tailgate end**

## STEP 2: Assemble and position 6 mounting blocks

Tighten t-slot nut, lock washer, and bolt securely with 1/2" wrench. Repeat with middle and back mounting blocks.

## STEP 3: Lift the assembled cover into the bed and position the rails

Using two people lift the cover and place it at the very front of the bed. Close the tailgate of the pickup.

**NOTE:** The front cover weather-strip must lay flat across the truck bed. Make certain it is pointed towards the cab. If it extends past the bed rail cap, cut to fit right up to the cap on the truck bed.

**STEP 4: Position and bolt *RETRAX* rails to mounting blocks.**

Center the threaded holes in the mounting blocks behind the openings of the *RETRAX* rail. Install 1/4" - 28 x 1" bolt and flat washer in all 6 holes. Use a 7/16" wrench to fasten.

**Continue with standard instructions at step 6 (pg. 4)**

**FOR STEP 7 IN STANDARD INSTRUCTIONS:**

The .050" spacers can be used to narrow the distance between the rails if needed to get the rails parallel to each other. Position the spacers between the back of the *RETRAX* and mounting block.

**NOTE:** Due to the unique configuration of the Dodge Ram Box rails and toolboxes, it is not possible to completely seal the bed with a bed cover. 18" of 1/2" thick self-adhesive weather-strip has been provided that can be applied where desired at the owner's/installer's discretion.

# Dodge Ram Box 2009 - 2010-up Installation

Check the parts shown here, this model has different requirements than the standard parts.

Continue with standard instructions through step 3 (pg. 2), then return back to this guide on how to install the mounting hardware.

(1) Ram Box Rail LH (driver side)	A
(1) Ram Box Rail RH (passenger side)	B
(4) Bracket Assembly	C
(2) Foam Blocks	D

## STEP 1: Remove cargo rail end caps and cleats

Remove the cargo rail and caps (1) and tie-down cleats (2) from the rails.

Refer to owner's manual.

## STEP 2: Install mounting brackets

Slide the mounting bracket assemblies to 4" from each end of the rails and tighten to 6.7 ft-lb; 9,1 N-m.

## STEP 3: Attach Foam Seals

## STEP 4: Insert adapter rails

4a. Slide the cover cargo adapter rails into the truck cargo rail.

4b. If tie down cleats are desired with the cargo rail, install after the first bracket assembly has been inserted into the factory rail.

Additional Note: 4c. If required for full seal, loosen and reseat the Ram Box rails.

4d. Apply downward pressure along the length of the side seal to help it to fully seat against the sides of the truck bed rail caps.

NOTE: Using soapy water will help to slide the rail and accompanying seal along the cargo rail.

← Once the rail kit is installed, continue with standard instructions for the RETRAX cover on page 2.

**Check the parts shown here, this model has different requirements than the standard parts.**

(4) M6 x 40mm (metric) Allen head mounting bolts	A
(2) 1/4" lock washers	B
(2) 1/4" flat washers	C
(2) nylon spacers	D
(4) 10-24 x 1" stainless screws with black caps	E

4mm Allen wrench	F
#40 Torx insert bit	G
(2) foam fillers for front tie-downs	H
(2) plugs for middle holds (step 8)	I
(2) front mounting brackets	J
Newer models may need rubber spacer at passenger rear mount	K

## STEP 1: Attach adhesive to rails

Remove the adhesive backing paper from under the front of both rails.

Push the front seal firmly into place over the adhesive keeping the seal even

## STEP 2: Remove factory bolts

Driver side front corner

Remove the factory bolts from both corners of the front wall of the bed. Use #40 Torx bit. (included)

## STEP 3: Remove factory screws

Driver side rear corner

Remove factory screws and spacers from both rear posts using #40 Torx bit. Drivers' rear corner is shown.

## STEP 4: Attach foam to tie downs

Passenger side front corner

Remove the adhesive backing paper from the foam fillers for the tie-downs. Push into place over the tie-down bolts. Repeat on drivers side.

## STEP 5: Install front mount brackets

Driver side front corner

Install front mount brackets as shown. Slide lock washer onto M6 x 40mm bolt, push bolt through hole in mount bracket and start threading into front holes in the bed. **Hold mount bracket level** and tighten using the 4 mm Allen wrench. (included) Repeat on passenger side.

## STEP 7: Lift the assembled cover into the bed

Using two people, lift the cover and place it at the very front of the bed. Close the tailgate of the pickup.

## STEP 6: Insert plastic plugs

Insert black plastic plugs into middle holes. Push the 2 supplied plugs into the 2 middle factory holes on both sides of the bed.

## STEP 8: Attach front cover to brackets

Start threading the (2) 10-24 x 1 mounting screws w/ black caps through the front cover into the front mount brackets. Do not tighten yet. Once rear brackets are tight, then fully tighten front screws using a #2 Phillips screwdriver. Fasten screw cover when finished.

Passenger side front corner

## STEP 9: Attach rear end to brackets

Driver side rear mount

Start rear mounting screws. Slide a flat washer onto the (2) M6 x 40mm (metric) rear mount bolts, insert bolts through holes in rear rail brackets, then insert nylon spacer and start threading into factory holes at rear. Use 4mm Allen wrench.

**STEP 10: Select proper mounting hole location**

Passenger rear mount holes

On the passenger rear mount plate, the hole used depends on if the rubber spacer is needed (see step 11). Most 2008 and older beds use the upper holes without the spacer. During the 2008 model year the passenger side of the Honda tailgate was raised slightly. The late 2008 and newer models use the lower hole and the rubber spacer. This is needed for clearance over the tailgate.

**STEP 12: Assemble and install drain tube**

Remove plastic film from the canister.

Insert tubes into the holes in the bottom of the canister. **Make certain they are clicked in all the way for proper drainage. 2 clicks means they are secured.**

**Optional Rail Weather Adjustment:** The inside walls of the Ridgeline bed have a slight bow outward from front to back. This can cause a slight gap between the rail weather strip and the side wall of the bed. The rail weather strip can be moved towards the bed wall if needed. Slide the weather strip firmly against the wall to close the gap.

Wall

Rearview passenger side rail

Wall

Rearview passenger side rail

**STEP 11: Add rubber spacer**

Passenger rear mount

The rubber spacer provided can be added under the passenger rear mount bracket for proper clearance over factory tailgate protector.

Peel off adhesive strip from rubber spacer and attach spacer underneath mount bracket.

You can pass the tubes through the 2 factory plastic bed bolt covers. Remove the covers and drill a loose 1/2" hole or a 9/16" hole for the tubes. Offset the holes as shown.

**Refer back to the standard instructions for final notes, maintenance, use, and the warranty statement.**

**The 2017 Ridgeline requires a rail mount to be installed before the installation of the RETRAX cover.**

Check the parts included in the rail box (shown below).

(4) Small rail bracket	A
(4) Large rail brackets	B
(8) Rail mount screws	C
(2) Rails	D

Follow the mounting instructions on the insert for the kit (included in rail box).

## INSTALLATION INSTRUCTIONS

**IMPORTANT- INSTALL THESE RAILS FIRST**

### 2017 Honda Ridgeline Mounting Rails

Tools Required:

- T50 Torx driver
- 7/16" Wrench

**1** Remove the 4 upper tie-down hooks. Keep the 8 Torx bolts, but do not reuse the tie-down hooks.

Front, upper tie-down hooks. Both sides.

Rear, upper tie-down hooks. Both sides.

Once the rail kit is installed, continue with the standard instructions for the RETRAX cover on page 2.

**Check the parts shown here, this model has different requirements than the standard parts.**

## WITH Utili-track:

(4) bracket bolts	A
(4) rail bolts	B
(4) 1/4" lock washers	C
(4) nylon washers	D
(8) 1/4" flat washers	E
(4) rail brackets	F

**Follow standard instructions through step 3, (pg. 2) then refer back**  
 **to this guide on how to install mounting hardware.**

## WITHOUT Utili-track:

**The Frontier with no Utili-track uses the clamps below.**

**Continue with the standard instructions on Page 2.**

## STEP 1: Remove the bolts from existing Utili-track rails and attach brackets

Remove all 8 white nylon rail adjustment spacers from the rails then proceed below.

### Frontier Crew Cab

Remove these bolts from both sides

### Frontier King Cab

Remove these bolts from both sides

Attach all 4 rail brackets to these holes using the 4 bracket bolts (long leg points up).

## FOR STEP 7 IN STANDARD INSTRUCTIONS:

To decrease the distance between the rails you add spacers next to the nylon washers between the **RETRAX** rail and the rail bracket. To increase the distance between the rails you remove washers or use thinner washers in place of the nylon spacers.

## STEP 2: Lift the assembled cover into the bed and position rails

Using two people, lift the cover and place it at the very front of the bed. Close the tailgate of the pickup. Using the 1/8" part at the top of the supplied shipping bracket, move the rails to achieve the 1/8" gap between the tailgate.

## STEP 3: Attach RETRAX rails to rail brackets

Use a rail bolt with lock washer and flat washer and insert through hole in **RETRAX** rail then use 1 white nylon washer between the rail and rail bracket. Start threading the rail bolt into the rail bracket.

**Continue with the standard instructions at step 6 (Pg. 4)**

**Check the parts shown here, this model has different requirements than the standard parts.**

## 5.5' - 6.5' bed WITH Utili-track:

It has the Utili-track uses the 4 clamps below.

Follow standard instructions through step 3, (pg. 2) then refer back  to this guide on how to install mounting hardware.

## 8' bed WITH Utili-track:

1. Empty out your clamp box.
2. Sort through and gather the 6 short (2") bolts, 6 cut clamp base and 6 utility bed fastening clamp
3. Assemble the 6 groups of clamps and follow standard instructions through step 3, (pg. 2) with only these 6 clamps, the rest are not used.

## STEP 1: Remove plastic caps

Remove and save the black plastic cap at the rear of the Utili-track on both sides of the truck.

**NOTE: The factory tie-downs may cause interference with the lock when rolling.**

**Option 1:** Use as is and push lock handle down slightly to bypass the factory tie-downs.

**Option 2:** Remove the tie-downs before installation. (disregard further reference to tie downs.)

**Option 3:** Smaller aftermarket tie-downs may be utilized in place of the larger original tie-downs.

## STEP 3: Re-insert tie downs and 2nd cleat

Re-insert tie downs into the track. Insert 2nd mounting cleat into track system on each side and position it underneath the white nylons spacers closest to the tailgate.

Finish by re-inserting the black plastic cap into the rear of the track system.

 Continue with the standard instructions at step 4 (pg.

## 5.5' - 6.5' bed WITHOUT Utili-track:

The Titan with no Utili-track uses the 4 clamps above.

Continue with the standard instructions on Page 2.

## UT Utili-track:

1. Empty out your clamp box.
2. Sort through and gather the 6 long (2.5") bolts, 6 full body clamp base and 6 normal fastening clamp
3. Assemble the 6 groups of clamps and follow standard instructions through step 3, (pg. 2) with only these 6 clamps, the rest are not used.

## STEP 2: Insert mounting cleats

Loosen and slide out the movable truck tie downs on each side of the bed. Insert (1) mounting cleat into the track system on each side, position it underneath the white nylon spacers closest to the front of the bed. **Important: Hole should be toward bottom of channel.**

## FOR STEP 5 ON STANDARD INSTRUCTIONS:

This photo shows how the clamp will mount to the rail. It is **important** to be sure that the threaded hole on the cleat is closest to the bottom of the C-Channel.

Check the part shown here, this model has different requirements than the standard parts.

(8) rubber rail adjustment spacers	A
(4) cleats	B
(4) rail spacer blocks	C

Follow standard instructions through step 3, (pg. 2) then refer  back to this guide on how to install mounting hardware.

**STEP 1: Install front rail gasket**

Be sure foam is added to front bed rail, not the C-Channel rail. Trim to fit.

**STEP 2: Insert mounting cleats**

Remove and save the black plastic cap at the rear of the Deck Rail track system on both sides of the truck. Loosen and remove tie-downs or other accessories from each side. Insert (2) mounting cleats into the track system on each side.

**STEP 3: Lift assembled cover into bed and position the rails**

Using two people, lift the cover and place it at the very front of the bed. Close the tailgate of the pickup.

Move the rails to achieve the 1/8" gap using the 1/8" part at the top of the bracket. Make certain the rails do not move after measuring.

**STEP 4: Bolt rails to pickup bed rails**

Position rail spacer block and cleat in line with the hole in the rail. Start threading bolt with washer into cleat. Attach using a 9/16" wrench. Repeat at other 3 mount locations. Keep rail level when tightening bolts.

Rail spacer block

**FOR STEP 7 IN STANDARD INSTRUCTIONS:**

If the rails are too far apart add rubber rail adjustment spacers. Loosen the rail mount bolt and slide spacer between bed cover rail and rubber side of spacer block.

Continue with the standard instructions at step 6 (pg. 4)

**Check the parts shown here, this model has different requirements than the standard parts.**

**Tools Required:** T-30 torx driver

**5' MODEL PARTS**

(4) 1/4" flat washers	A
(4) 1/4-28 x .75 fastener	B
(4) 3/8-16 x 1.5 fastener	C
(4) 3/8" split washer	D
(4) cleats	E
(4) 0.050 adjustment shim	F

**6' MODEL PARTS**

(4) 1/4" flat washers	A
(4) 1/4-28 x 1.5 fastener	B
(4) 3/8-16 x 1.5 fastener	C
(4) 3/8" split washer	D
(4) cleats	E
(4) 0.050 adjustment shim	F
(4) plastic spacer blocks	G

**6' model refer to page 22**

**RECOMMENDED FOAM (5' model only)**

**Remove film from the canister on the 5' model only, before installation.**

On the 5' model, there is an aluminum lip that sticks out on the bottom of the canister. The supplied foam pieces are recommended to prevent scratches on your truck.

With the edge of the cover facing you, roll the canister **90° away** from you. The foam will line up with the rear-bottom fold. Remove adhesive backing and apply the foam to both sides.

**5' MODEL ONLY:**

Remove the front tie downs in the bed. Use a T-30 torx.

**STEP 1: Install seal**

**FOR BOTH MODELS:**

**TOOLS NEEDED:**  
T-30 Torx driver, 3/8" drive short extension, ratchet

- 1** Remove factory cab header rail
- 2** Use T-30 Torx driver to remove 5 fasteners securing header rail to front bulkhead below cab rear window
- 3** Peel backing paper off of foam seal and adhere to header rail endcaps
- 4** Reposition factory cab header rail on truck bed
- 5** Install and torque all mounting bolts to 7.5Nm (66.5 lbs-in)

**STEP 2: Insert mounting cleats**

Remove and save the black plastic cap at the rear of the Deck Rail track system on both sides of the truck. Loosen and remove tie-downs or other accessories from each side.

Insert (2) mounting cleats into the track system on each side.

**STEP 3: Bolt spacers to RETRAX rails**

1. Mount spacer block prior to cover installation to pickup bed.
2. Use the 1/4-28 fastener and 1/4" flat washer on the inside of the rail. Attach with 7/16" wrench.

Passenger side rail

Passenger side rail

**5' model**

← Continue with standard instructions through step 6 (pg. 4) **DISREGARD STEP 5**, then refer back to this guide on how to install and adjust the mounting hardware. →

**STEP 4: Bolt rails to pickup bed rails**

**Make certain the rails are parallel - see page 3 at step 6. If not, see adjustments below.**

**STEP 5: Adjust rails to maintain parallel rails**

If rails are too far apart add 0.050 shim between rail and aluminum spacer . Continue adjustment until rails are parallel. Shim is circled in red.

**Continue with standard instructions at step 8 (pg. 4)**

**Check the parts shown here, this model has different requirements than the standard parts.**

**Follow standard instructions through step 3, (pg. 2) then  refer back to this guide on how to install mounting hardware.**

## STEP 1: Remove plastic caps

Remove and save the black plastic cap at the rear of the Deck Rail track system on both sides of the truck. Loosen and slide out the movable truck tie downs on each side of the bed.

## STEP 3: Re-insert tie downs and 2nd cleat

Re-insert the tie down clamps on each side of the bed, before inserting 2nd cleat.

After putting tie downs back into bed, insert 2nd mounting cleat into track system on each side, positioning it approximately 8" from tailgate.

Finish by re-inserting the black plastic cap into the rear of the track system.

**Continue with the standard instructions at step 4 (pg. 3)**

## STEP 2: Insert mounting cleats

Insert 1 mounting cleat into the track system on each side, position it about 15" from the front of the bed.

## FOR STEP 5 ON STANDARD INSTRUCTIONS:

This photo shows how the clamp will mount to the rail. It is **important** to be sure that the threaded hole on the cleat is closest to the bottom of the C-Channel.
