

## **INSTRUCTIONS FOR THE INTAKE/AIR INDUCTION KIT FOR RKSPORT'S '93-'97 CAMARO FUNCTIONAL RAM-AIR COMP HOOD**

- **Complete intake up to mass air sensor must be removed including filter box.**
- **Remove two front bolts on fuel rail.**
- **Remove clip for fuel lines from throttle body cover.**
- **Remove the rubber 90 degree elbow from the air tube that goes into the headers**
- **Loosen the air tube from where it goes into the header**
- **Rotate the air tube 180 degrees back towards the fire wall and then bend slightly down toward the headers (This is for clearance purposes only)**
- **Bend tube from air pump towards the driver's side wheel well as far as possible so as to clear the installation of the new air box**
- **Install the rubber tube provided in your kit by connecting the metal tube from the air pump to the diaphragm that you previously rotated 180 degrees**
- **To install the air box, you may want to cut (2-3) billows from the rubber elbow connected to the throttle body. This will make the installation process easier.**
- **The air box tube fits directly to the mass air sensor**
- **The fuel lines will run over the top of the air tube**
