

## 1997-2003 Ford F150 4WD 4"-5" Suspension Kit

Thank you for choosing Rough Country for your suspension needs.

Rough Country recommends a certified technician install this system. In addition to these instructions, professional knowledge of disassemble/reassembly procedures as well as post installation checks must be known. Attempts to install this system without this knowledge and expertise may jeopardize the integrity and/or operating safety of the vehicle.

Please read instructions before beginning installation. Check the kit hardware against the kit contents list. Be sure you have all needed parts and know where they go, separating parts according to where they go and placing hardware with the brackets before you begin with save on installation time.

### PRODUCT USE INFORMATION

As a general rule, the taller a vehicle is, the easier it will roll. Offset, as much as possible, what is lost in rollover resistance by increasing tire track width. In other words, go "wide" as you go "tall". Many sportsmen remove their mud tires after hunting season and install ones more appropriate for street driving; always use as wide a tire and wheel combination as possible to enhance vehicle stability.

Braking performance and capability are decreased when significantly larger/heavier tires and wheels are used. Take this into consideration while driving.

Do not add, alter, or fabricate any factory or after-market parts which increase vehicle height over the intended height of the Rough Country product purchased. Missing component brands, lifts, and/or combining body lift with suspension lifts voids all warranties. Rough Country makes no claims regarding lifting devices and excludes any and all implied claims. We will not be responsible for any product that is altered.

This kit will not work on all wheel drive—AWD F150 or Expeditions.

This suspension system was developed for 315/75 R16 tire on an after market wheel with 4.5" of back spacing. A 16", 17" or 20" wheel that is 8" wide is recommended at 5" of lift. Additionally we recommend the use of a quality tire of radial design not exceeding 35x12.50". This lift is determined from the front while only lifting the rear to a position level with the front. If you want the rear to set higher order part # 6574.

### NOTICE TO DEALER AND VEHICLE OWNER

Any vehicle equipped with any Rough Country product should have a "Warning to Driver" decal installed on the inside of the windshield or on the vehicle's dash. The decal should act as a constant reminder for whoever is operating the vehicle of its unique handling characteristics.

INSTALLING DEALER - It is your responsibility to install the warning decal and forward these installation instructions on to the vehicle owner for review. These instructions should be kept in the vehicle for its service life.

***We hope installing your Rough Country lift kit is a positive experience. Please note that variations in construction and assembly in the vehicle manufacturing process will virtually ensure that some parts may seem difficult to install. Additionally, the current trend in manufacturing of vehicles results in a frame that is highly flexible and may shift slightly on disassembly prior to installation. The use of pry bars and tapered punches for alignment is considered normal and usually does not indicate a faulty product.***

## KIT CONTENTS

### Kit Contents:

- Dr & Pass Knuckles
- Driver Side Cross Member Brackets (2)
- Pass Side Cross Member Bracket (2)
- Front Cross Member
- Rear Cross Member
- Passenger Diff Drop Bracket
- Sway Bar Links (2)
- Sway Bar Link Brackets (2)
- Bump stop Brackets (2)
- Lower Skid Plate
- Front Skid Plate
- Cross Member Spreader Bar
- Rear Blocks
- Rear U-bolts
- Front Shocks (650346)
- Rear Shocks (650333)
- Hardware Poly Bag

## PRE-INSTALLATION

Prior to beginning installation, carefully inspect the vehicle's steering and driveline system paying close attention to the tie rod ends, ball joints, and wheel bearings. Additionally, check steering to frame and suspension to frame attaching points for stress cracks. The overall vehicle must be in excellent working condition before beginning installation. Repair or replace all worn or damaged parts.

### Tool Required List:

8mm socket	10mm socket
12mm socket	13mm socket
14mm socket	15mm socket
18mm socket	21mm socket
22mm socket	24mm socket
36mm socket	8mm wrench
10mm wrench	10mm wrench
12mm wrench	13mm wrench
15mm wrench	18mm wrench
21mm wrench	22mm wrench
24mm wrench	Torque Ratchet
Torsion Bar Tool	17/64 drill bit
5/64 drill bit	Sawall
Drill	Grinder
Jack stands (2)	Floor jack
Safety Glasses and Gloves	

### Torque Specs:

Size	Grade 5	Grade 8
3/8"	30 ft/lbs	35 ft/lbs
7/16"	45 ft/lbs	60 ft/lbs
1/2"	65 ft/lbs	90 ft/lbs
9/16"	95 ft/lbs	130 ft/lbs
5/8"	135 ft/lbs	175 ft/lbs
	Class 8.8	Class 10.9
6MM	5 ft/lbs	9 ft/lbs
8MM	18ft/lbs	23 ft/lbs
10MM	32ft/lbs	45ft/lbs
12MM	55ft/lbs	75ft/lbs
14MM	85ft/lbs	120ft/lbs

## FRONT INSTALLATION

1. With the truck sitting on a level surface measure the distance from the center of the wheel to the bottom of the fender. Record these Measurements. **See Photo 1 & 2.**

Front Driver \_\_\_\_\_  
Rear Driver \_\_\_\_\_

Front Passenger \_\_\_\_\_  
Rear Passenger \_\_\_\_\_

2. With the truck parked on a clean, dry, and level surface set the parking brake. Chock the rear wheels. Using a floor jack raise the front of the truck and support the frame rail with approved jack stands. **NEVER WORK UNDER AN UNSUPPORTED VEHICLE.**
3. Using a 22 mm socket remove the lug nuts on the front wheels and remove the front wheels
4. Measure the amount of thread showing on the torsion bar adjuster bolts. **See Photo 3.** Drivers Side \_\_\_\_\_  
Passenger Side \_\_\_\_\_ Using a 18mm socket remove the adjuster bolt.
5. Using a Ford approved torsion bar tool, remove the torsion bar adjuster nuts and adjusters. Set aside, these will be reused.

6. Using a 18 mm wrench and 18 mm socket remove the upper shock nuts. Using a 13 mm wrench and 18 mm socket remove the lower shock bolt. Retain the lower hardware for reuse.
7. Using a 16 mm wrench and 15 mm socket remove the stock sway bar links. **See Photo 4.**
8. Using a 13 mm wrench remove the brake caliper. Tie the caliper up and out of the way. Do not let the caliper hang from the brake line. Using a 18 mm socket remove the brake caliper bracket.
9. Using a 8 mm socket remove the brake dust cover. **This will be reinstalled on the new knuckle.**
10. Using a 8 mm socket remove the ABS hold down from the knuckle. Using a 3/16 allen wrench remove bolt and the sensor. Route this up to the frame rail. **The allen bolt will be reused.**
11. Using side cutters remove the cotter pin from the tie rod castle nut. Using a 21 mm socket remove the nut from the tie rod. Using a hammer tap the knuckle as shown until the tie rod pops out. **See Photo 5. Never hit the tie rod itself.**
12. Using side cutters remove the cotter key from upper ball joint. Using a 21 mm socket loosen the nut. Hit the knuckle as shown until the ball joint pops loose. **See Photo 6.**

Photo 4

Photo 5

Photo 6

13. Using side cutters remove the cotter pin from the lower ball joint. Using a 24 mm socket remove the castle nut from the ball joint. Using a hammer hit the knuckle as shown in **Photo 7** until the ball joint pops free.
14. Using side cutters remove the cotter pin from CV shaft. Using a 36 mm socket remove the nut. **See Photo 8.**

Photo 7

Photo 8

15. Remove the nut from the upper ball joint and remove the knuckle from the truck. Using a 15 mm socket remove the wheel bearing from the knuckle. Using a blunt punch and hammer remove the rear seal from the knuckle. Retain hardware for reuse.
16. Using a 15 mm socket remove the six bolts that attaches each CV shaft to the front differential. **Retain the bolts, they will be reused.**

- 17 Using a flat head screw driver remove the plastic cover on the front frame rail. **See Photo 9.** Using a 21 mm socket and 24 mm wrench remove the front and rear lower control arm bolts. Be careful the torsion bar will come out with the control arm. **See Photo 10.** Remove the torsion bar. Scribe a mark on the torsion bar to note it indexing in relationship to the control arm. The bars are to be reinstalled in same relationship as removed.

- 18 Position a floor jack or jack stand under the differential to allow the differential bolts to be removed.
- 19 Using a 15 mm socket and 18 mm wrench remove the passenger side upper bolt as shown in **Photo 11** that secures the differential to the frame. Retain the stock hardware for reuse.
20. Using a 15mm socket and 18mm wrench remove the driver side upper and lower differential bolts that secure the differential to the frame. **See Photo 12 & 13.** Retain the stock hardware for reuse.

21. Using a 15 mm socket remove the bolts securing the rear cross-member to the frame as shown in **Photo 15** and remove from the vehicle.

22. Unplug the Differential vacuum hoses. **See Photo 16.** Gently pull down on the hoses giving it 5 inches of slack. Using a 12 point 12 mm socket remove the four bolts that secure the drive shaft to the differential. Retain hardware for re-use.
23. Locate the 4 cross member drop brackets and assemble them using the 7/16" x 1 1/4" bolts, thick washers, and nylock nuts with the cross members as shown in **Photo 17.** **Only three bolts per side will be used. Do not tighten at this time.**
24. With the differential still supported with jack stands or a floor jack and using the 9/16 x 5 1/5 bolts, install the cross-members into the lower control arm sockets as shown in **Photo 18.** The bolts will be installed from the front to the rear. Do not tighten at this time.

Photo 16

Photo 17

Photo 18

25. Assemble the front cross member the same as the rear with the supplied 7/16" x 1 1/4" bolts, washers/nuts. **Only three bolts per side will be used.** DO not tighten at this time.
26. Install in the front factory location as shown in **Photo 19** with the supplied 9/16" x 5 1/2" bolts. Do not tighten at this time.
27. Install the diff drop bracket on the passenger side as shown in **Photo 20** with the factory hardware on the frame and the supplied 12mm x 100m bolts, washers /nuts on the differential. Do not tighten at this time.

Photo 19

Photo 20

28. Install the skid plate on the drivers side as shown in **Photo 21** on the differential tabs with the supplied 12mm x 100mm bolts, washers/nuts. Do not tighten at this time.
29. Remove the torsion bars from the lower control arms and install the lower control arms into the new brackets. With the factory hardware. Slightly tighten the bolts. **See Photo 22.**

**Photo 21**

**Photo 22**

30. Tighten the 12 cross member bracket bolts to 45 ft lbs. Tighten the upper cross member bolts to 65 ft lbs.
31. Lightly pull the vacuum hose down and reinstall on the differential.
32. Locate the supplied spreader bars and install as shown in **Photo 23** using the supplied 4-3/8" x 1" bolts/washers & nuts. Tighten with a 9/16 wrench.
33. Using a 12 mm 12 point socket install the drive shaft with factory bolts.
34. Using a 15 mm socket and a 18 mm wrench remove the front and rear bolts from the Torsion bar adjuster bracket. Using a 18 mm socket and 18 mm wrench remove the center bolt. **See Photo 24. Retain the two factory outer bolts for reuse.**

**Photo 23**

**Photo 24**

35. Install the supplied 12mm x 1 1/4" crush sleeve as shown in **Photo 25** on the stock torsion bar cross member.
36. Locate the torsion bar drop brackets and install as shown using the supplied 7/16" x 1 1/4" bolts/washers & nuts. **See Photo 26.** Do not tighten at this time.

**Photo 25**

**Photo 26**

37. Install the factory cross member in the drop brackets as shown with the factory hardware on the two outer bolts and using the 10mm x 65mm bolt / washer & nuts in the center. Do not tighten at this time. Slide the torsion bars into the lower control arms.
38. Raise the torsion bar adjuster bracket into position in the torsion bar cross member and install using factory hardware.
39. Make sure that both sides of the drop bracket / torsion bar cross member assembly are straight with the frame tighten all hardware to 45 ft lbs.
40. Using the factory CV bolts reinstall the CV shafts on the differential as shown in **Photo 27** using a 12mm 12 point socket.
41. Locate the bearing assembly removed from the stock knuckle. **If the seal is in good condition, install the seal in the new knuckle. If necessary purchase new seals. Install the bearing into the new knuckle with the factory hardware using a 15mm wrench. See Photo 28.**
42. Reinstall the ABS sensors & wire clip as shown in **Photo 29** using a 3/16" allen head wrench and install wire clip onto new knuckle using a 8mm wrench.

Photo 27

Photo 28

Photo 29

43. Install on the lower and upper ball joints as shown in **Photo 30 & 31** with stock hardware and supplied cotter pin. Tighten using a 21mm wrench for the upper ball joint and a 24mm on the lower ball joint.
44. Install the stock tie rod on the new knuckle with stock hardware using a 21mm wrench. Install supplied cotter pin.
45. Install the bump stop extension bracket as shown in **Photo 32** using the supplied 1/2" x 1 1/2" bolts/washers & nuts. Install the factory bump stop on top of the bracket using factory hardware.

Photo 30

Photo 31

Photo 32

46. Using a 10 mm socket remove the brake line bracket from the frame rail. Measure down 2.5 inches and drill a hole using a 17/64" bit. Using the factory screw reinstall the hold down in the frame. **See Photo 33 & 34.**

**Photo 33**

**Photo 34**

47. Trim the dust shield as shown and reinstall on the knuckle using it as a template to locate the 1/4" hole to be drilled. Mark the hole, drill the 1/4" hole and install on the knuckle. **See Photo 35.**
48. Using a 18 mm socket install the caliper hold down bracket.
49. Using a 13 mm wrench install the brake caliper.
50. Using a 36 mm socket install the outer CV shaft nut and torque to 85 ft lbs. Install the supplied cotter key.
51. Install the new sway bar link bracket on the lower control arm as shown in **Photo 36** with the supplied 12mm x 35mm bolts, flat washer and flange lock nut. Do not Tighten at this time.
52. Install the sway bar link bracket on the sway bar as shown in **Photo 36** with the supplied 12mm x 35mm bolts, flat washer and flange lock nut. Do not tighten at this time.
53. Install the sway bar link in the upper and lower bracket with the supplied 12mm x 65mm bolts with the head of the bolts toward the rear of the vehicle.
54. Tighten all sway bar hardware using a 18mm & 19mm socket & wrench.
55. Install the front shock part number 650346 in the factory location with the factory hardware on the bottom of the shock. Tighten with a 9/16" wrench on the upper and a 13mm & 18mm wrench for the lower.
56. Using the Ford approved torsion bar tool install the torsion bar adjusters and adjuster nuts. Using a 18 mm socket set the torsion bars to factory setting.

**Photo 35**

**Photo 36**

57. Install the supplied skid plate using the supplied 3-3/8" x 1 1/4" & 2 1/2" x 1 1/2" self tapping bolts. **See Photo 37.**
58. Tighten all hardware on the cross members, upper control arms, and diff drop brackets. **Do not tighten the lower control arms until the vehicle is on the ground and at ride height..**
59. Install the wheels and tires and torque to factory.
60. Lower vehicle to the ground, set the ride height and tighten the lower control arms.

## REAR INSTALLATION

1. Raise the rear of the vehicle and support with approved jack stands. Remove the rear wheels.
2. Using a 18 mm socket and 18 mm wrench remove the lower shock bolt. Using a 18 mm wrench remove the upper shock nut. Retain stock hardware.
4. Using a 21 mm socket remove the u-bolts. **See Photo 38.** Doing one side at a time.
5. Install the new blocks under the factory block and new u-bolts and tighten to 85 ft lbs. **See Photo 39.**

6. Install new shocks part number **650333** with new nut for the top and factory bolt and nut on the lower.
7. Install the wheels and tires tighten to factory specs and lower vehicle on the ground.

## OPTIONAL EQUIPMENT

OPTIONAL STEERING STABILIZER:  
PART # 87343

Please contact your local Rough Country Dealer for more information.

## POST INSTALLATION INSTRUCTIONS

1. Lug nuts should be check after 50 miles and all nuts and bolts should be checked and tightened after 500 miles. All parts should be checked every 3000 miles for the life of the vehicle.
2. Recheck brake hoses and lines for proper clearances.
3. Perform steering sweep to check for appropriate tire clearance. Note- Some oversized tires may require trimming of the bumper and valance
4. If new tires are installed that are more than 10% taller than original tires, the speedometer must be recalibrated for the anti-lock brake system (if applicable) to function properly. Contact an authorized Ford dealer for details on recalibration.
5. Adjust headlights back to proper settings.
6. Have a qualified alignment center realign front end to factory specs.
7. Install "Warning to Driver" decal on sun visor.

**NOTE**  
 94005527 SHOWN  
 94005528 SYMMETRICALLY  
 OPPOSITE

MATL- DUCTILE IRON, ASTM A536 CLASS
