

[Table Of Contents](#)

**Acknowledgments**

**Introduction**

**Foreword by Roger Helgesen**

**Chapter 1: Engine Building Practices**

The Importance of Good Parts and Engine Building Practice

Inspection

Preparation

**Chapter 2: The Production of Power**

Flow Bench Relevance

Heat Management

Dynamometer Results

Rating Standards

**Chapter 3: Cylinder Blocks**

Block Logic

What to Look For

Block Selection

Casting Material

Locating the Right Block

Teardown and Cleaning

Block Strip

Pre-Machining Details

Oil Return Holes

Professional Cleaning and Checking

Moving Bores

Machining Operations

Acquiring Your Performance Block the Easy Way

Post-Machining Detailing

## **Chapter 4: Cranks, Rods and Pistons**

Stock Cranks

A Little Money, a Lot More Torque and Horsepower

Fast Mover

Clean Sheet

Other Applications

Buying a Forged or Billet Crank

Bearings

Strengthening Process

Crank Vibration Dampers

Connecting Rods

Pistons: Type to Use

Pistons: Aftermarket

Piston Selection

Rings

Balancing

## **Chapter 5: Lubrication Systems**

Losing ZDP

Power Versus Oil Type

Oil Temperature

Oil Filters

Oil Pumps

Oil Pan Design

Top-End Oil Restriction

Oil Movement

## **Chapter 6: Cylinder Heads**

Factory Heads for Performance

Production Head Overhaul

Guide Inspection

Valve Sizes and Seat Recession

Correcting Excessive Guide Clearance  
Accommodating High-Performance Springs  
Basic Small-Block Chevy Head Porting  
Compression: The Budget Racer's Big-Power Ticket  
Cylinder Heads Detailing and Assembly  
Porting 186/041-Style Head Castings  
Porting L98 Corvette Heads  
Porting L31 Vortec Heads  
Aftermarket Heads  
Port and Chamber Volume Selection  
Basic Porting Results  
Iron Heads Compared  
Aluminum Heads

## **Chapter 7: Cams & Valvetrains**

Basic Five  
Fuel Octane and Dynamic CR  
Overlap  
LCA Selection  
Duration  
Dual-Pattern Cams  
Lift Versus Output  
Lift Versus Wear  
Making a Cam Selection  
Springs  
Retainers  
Lifters  
Pushrods  
Timing in the Cam  
Installing a Roller Cam  
Finally Making a Cam Selection  
Read this Before You Make a Cam Selection

## **Chapter 8: Induction Systems**

Sourcing and Filtering the Air

Carburetors

Fuel Atomization

Increasing Booster Signal and Airflow

Calibration

Manifolds

## **Chapter 9: Exhaust Systems**

Exhaust Initiated Induction

Low Budget and Basic Iron

Pipe Diameters

Headers and Low System Flow

Pipe Lengths

Headers and Quality

Muffled Systems

Muffler Flow

Setting Functional Boundaries

Required Flow

Pressure Waves

Noise Abatement

Balance Pipes

Summary

## **Chapter 10: Ignition Systems**

HEI Shortcomings

Basic Rebuild

More Spark, More RPM

Coil Test

Module Test

Spark Test

Plug Cables

Mechanical Attributes

Timing Controls

Mechanical Advance

Vacuum Advance and Mileage

## **Chapter 11: Nitrous Oxide**

Effective Systems

Problem Areas

System Optimization

More Optimal Engine Specs

Nitrous Cams

A Long Arm

Combined Effects

High-Output Systems

How Much Power?

## **Chapter 12: Ten Hot Engine Builds**

Engine 1: 350 Recon Special

Engine 2: PP 186 Headed 350

Engine 3: 6 Inch Rod 350

Engine 4: Vortec Headed 350

Engine 5: Zex N2O Injected 350

Engine 6: Staged N2O Injected 350

Engine 7: Dart Headed 383 (Entry Level)

Engine 8: Dart Headed 383

Engine 9: Dart/AFR Headed 408

Engine 10: AFR Headed 434
