

Please READ and FOLLOW all instructions carefully.

The Triple Track carrier was designed to carry bicycles inside of vans and sport utility vehicles. Once you have made adequate space inside of your vehicle, place Triple Track in the vehicle. The carrier comes equipped with rubber pads on the bottom to prevent it from sliding around in the vehicle. It is possible to permanently secure carrier by utilizing the holes in the center track. Depending on the number of bikes that you are transporting, it may be necessary to stagger your Traps. The above illustration shows the different positions that you can mount the Traps in.

Additional Notes

- If mounting in a vehicle that has a bed liner, you will need to drill thru the liner and may need to purchase longer bolts from your local hardware store.
- When carrying multiple bikes, we recommend securing all back tires together to form a triangle. This will reduce undesired movement.
- When using carrier in a truck that doesn't have a tail gate, make sure to secure either carrier or bikes to the vehicle.
- It's the end users responsibility to ensure that use of this product meets all local and state laws.

Caution

If permanently securing, carrier's attachment is critical and beyond the control of the manufacturer. Graber Products has no control over the mounting of the TRACK and as such can not assume responsibility for any damages to your vehicle. The following instructions are meant to be guidelines for attachment. It is the end users responsibility to insure a secure installation. Manufacturer and seller expressly disclaim any and all liability for personal injury, property damage or loss, whether direct, indirect, or incidental, resulting from the incorrect attachment, improper use, inadequate maintenance, or neglect of this carrier.
