

# APPLICATIONS

AUTOMOTIVE

TRUCKING/FLEET

MARINE

CONSTRUCTION

POWERSPORTS

CAMPING

POLICE

HOUSEHOLD

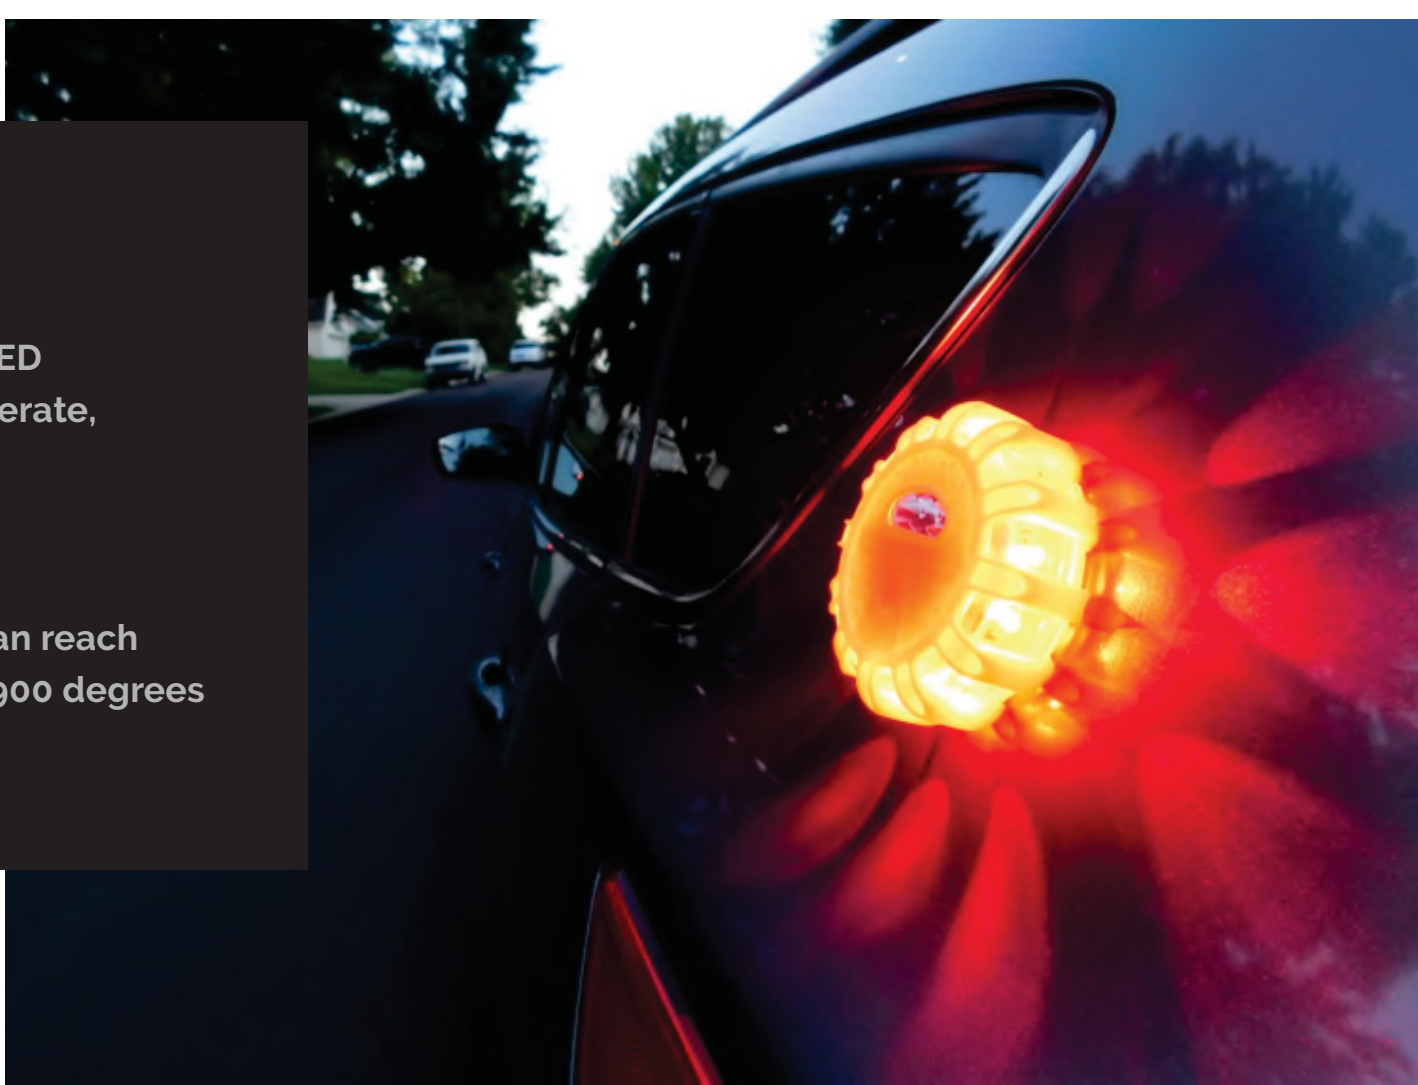

# BENEFITS

## SAFETY FIRST!

ALERT features cool-touch LED Technology that is safe to operate, handle, and store.

vs.

Traditional road flares that can reach operating temperatures of 2900 degrees Fahrenheit!

## MONEY TALKS...

ALERT will save you time and money!

To achieve the same burn time as Savior's ALERT Lights, you would spend over \$500 on traditional pyrotechnic road flares!

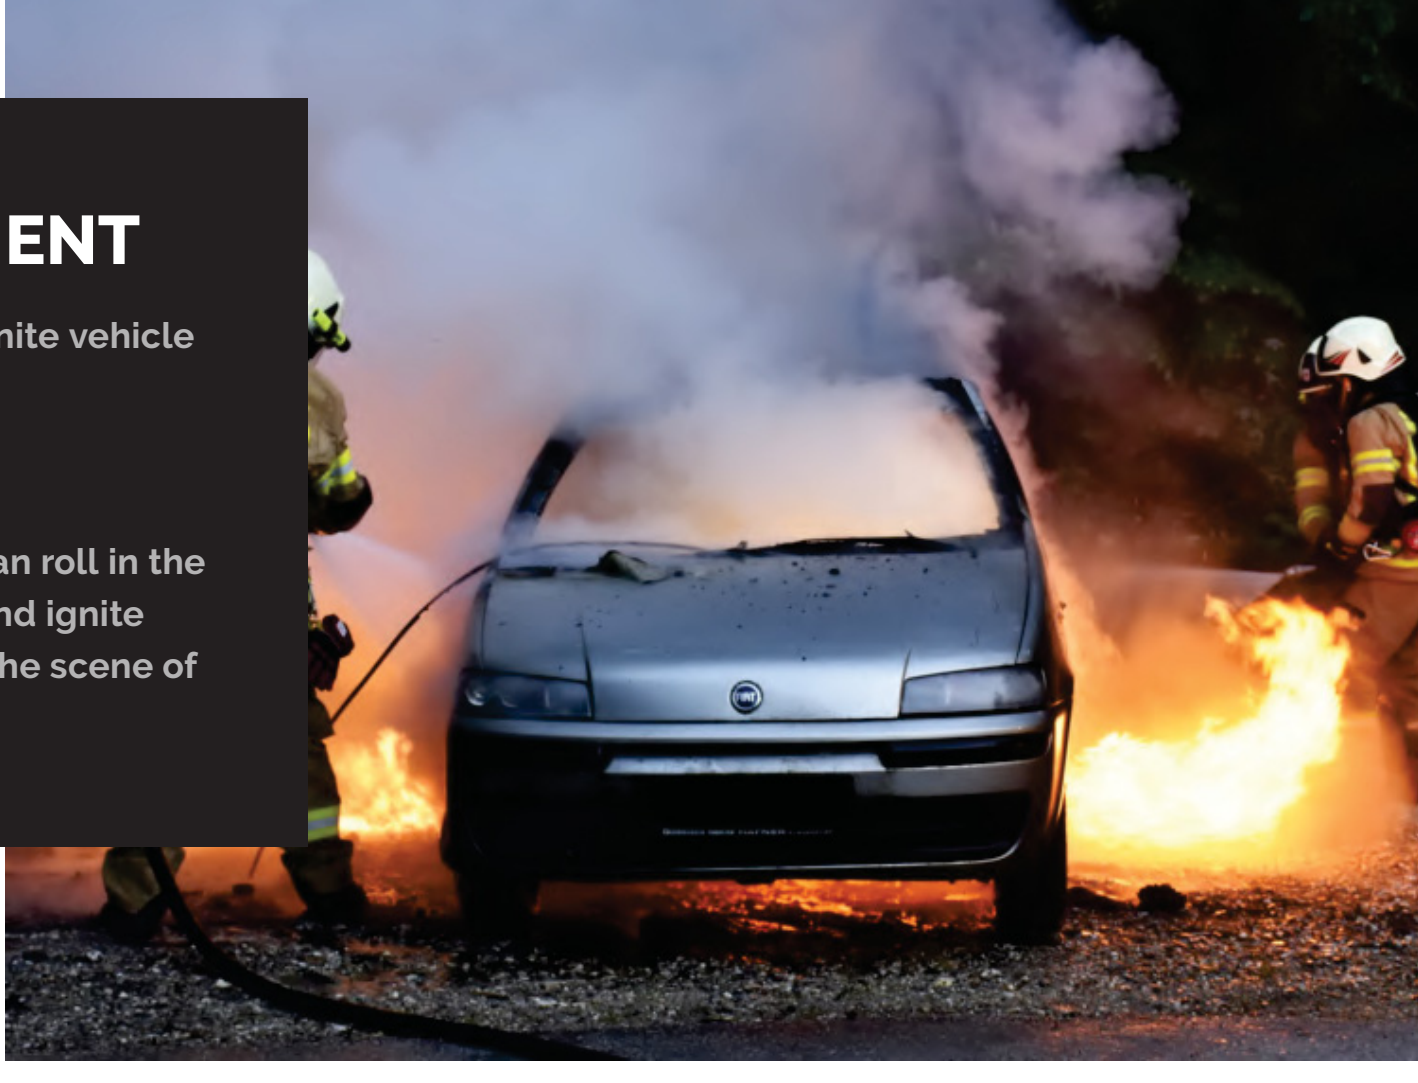

## SAFE DEPLOYMENT

ALERT won't roll, crush, or ignite vehicle fluids!

vs.

Traditional road flares that can roll in the wind, crush when run over, and ignite flammable vehicle fluids at the scene of a wreck!

## LONGER LASTING!

Depending on the mode, ALERT will run for 40+ Hours on a single set of lithium AAA Batteries!

vs.

Traditional road flares that last 15-30 minutes.

## NO SMOKE.NO MOLTEN RESIDUE.

ALERT produces zero emissions or residue!

vs.

Traditional road flares that can produce toxic smoke and emit molten residue during operation!

## NO EXPIRATION DATE

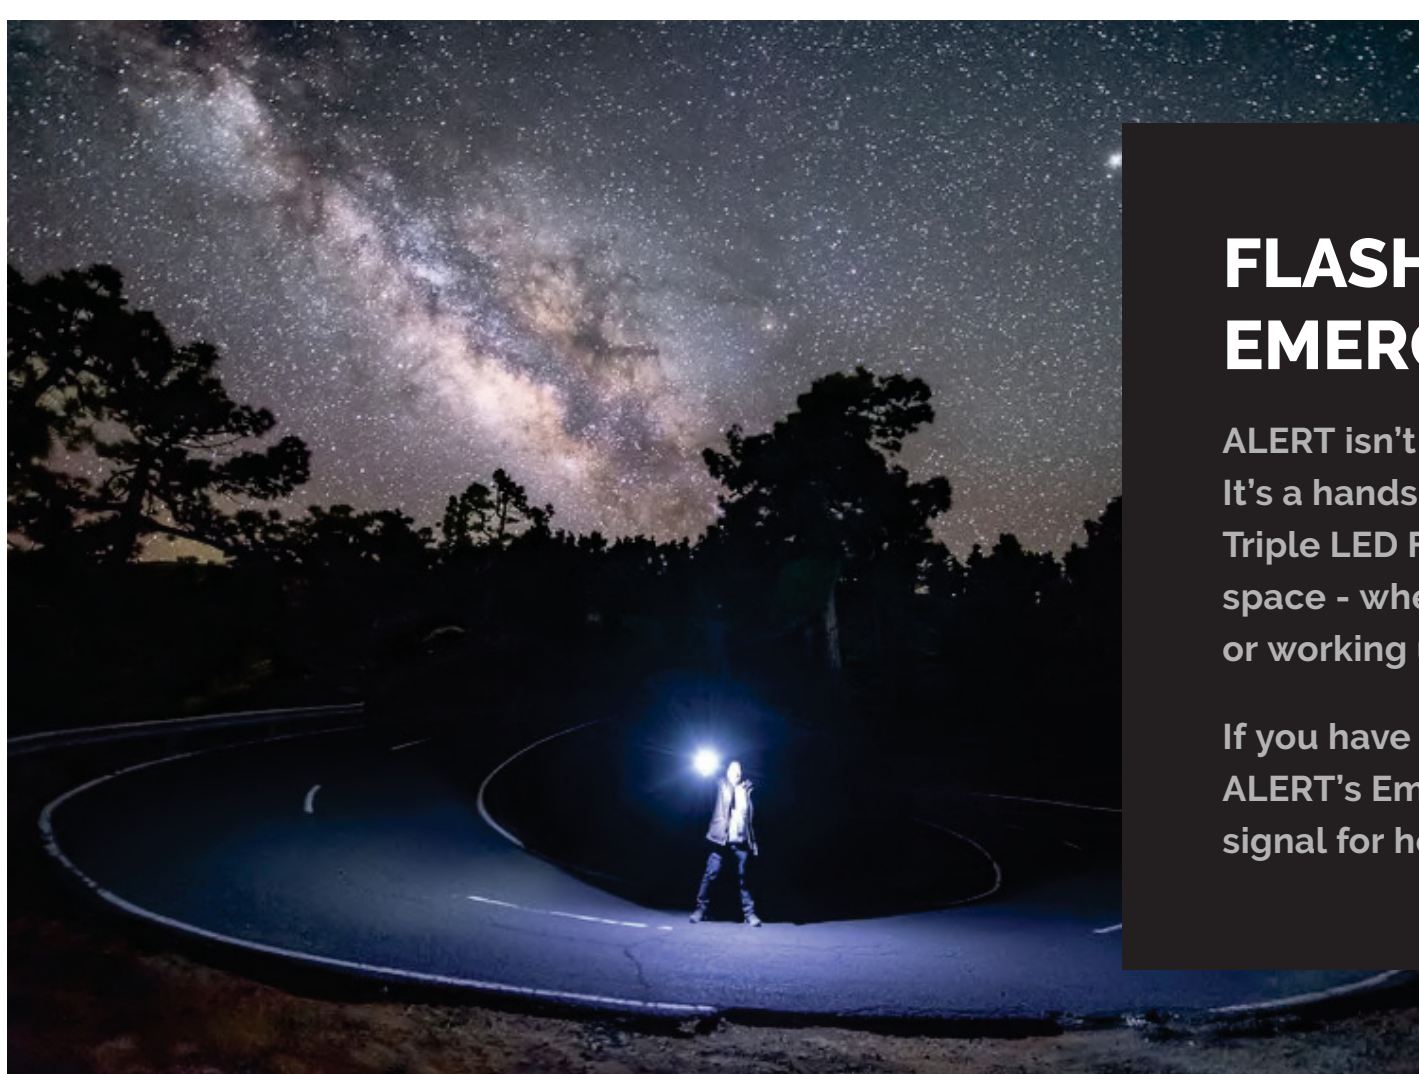

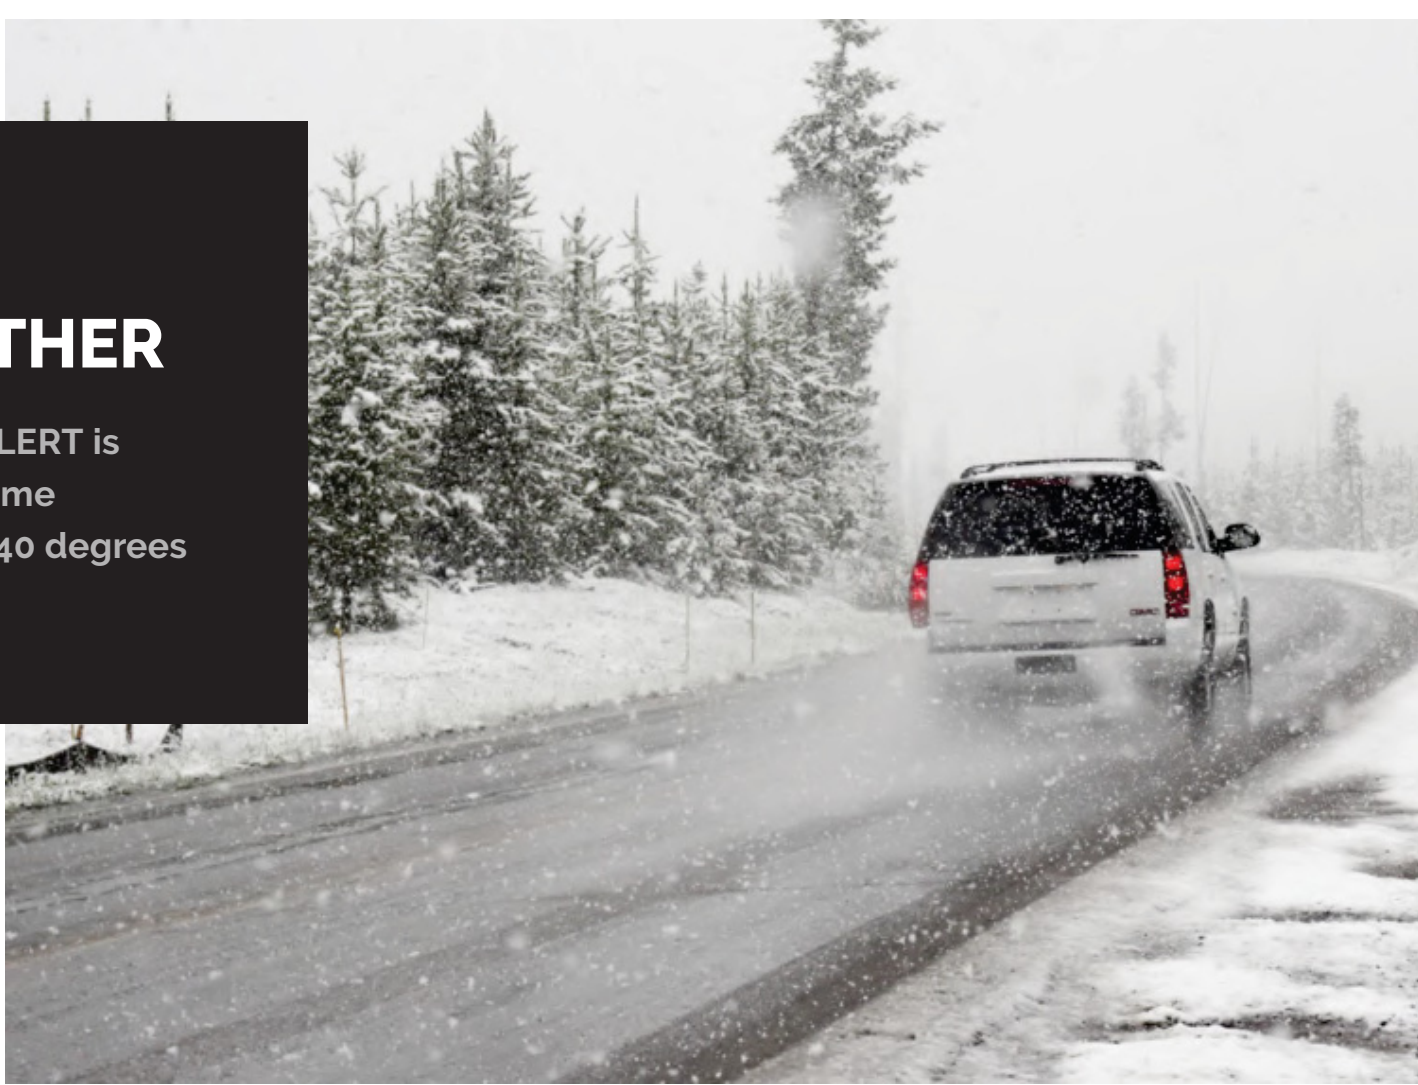

ALERT is ready to perform when you need it most. We recommend using lithium AAA Batteries to unlock 20 years of shelf-life and be ready for any emergency situation that comes your way!

vs.

Traditional road flares have expiration dates that constantly need to be checked - requiring constant purchases of new flares to replace expired flares.

## OPERATES IN EXTREME WEATHER

With lithium AAA Batteries ALERT is capable of operating in extreme temperatures ranging from -40 degrees F to 140 degrees F!

## FLASHLIGHT & EMERGENCY S.O.S.

ALERT isn't just a road flare substitute. It's a hands-free light in the dark. The Triple LED Flashlight lights up your work space - whether you're changing a tire or working under the hood.

If you have an emergency, utilize ALERT's Emergency S.O.S. Mode to signal for help!
