

What Size HUSKE Plugs Do I Need?

9 mm

12 mm

15 mm

20 mm

So you've got a new SeaSucker bike rack (or maybe just a new HUSKE fork mount); now you need to get the right HUSKE Plugs to fit your bike. If you don't know what front hub your bike has, it's not that hard to figure out - all you have to do is measure it.

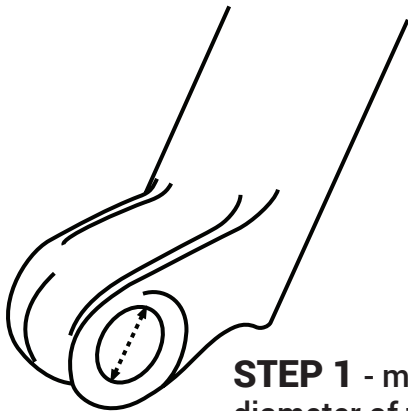

First, get a ruler or tape measure showing millimeters (sorry Americans, the bike world is firmly in the grip of METRIC TYRANNY!).

Step 1: measure the diameter of the hole at the end of your forks - it will be either 9mm, 12mm, 15mm or 20mm.

Step 2: measure the distance between the holes on your fork - it will be either 100mm or 110mm.

Now purchase the HUSKE Plugs that match your measurements. There's a color coded chart below that will help you make sure you're buying the right set.

If you don't have a metric ruler, cut out and use the ones printed to the right!

STEP 1 - measure the diameter of the hole.

If the tips of your forks look like this, you need 9x100mm HUSKE Plugs AND a skewer.

STEP 2 - measure the distance between the forks.

		Diameter of Hole			
		9mm	12mm	15mm	20mm
Distance Between Forks	100mm	Black	Silver	Blue	Red
	110mm			Gold	Green

110mm

100mm
