MEASURING AIR SPRINGS

Part # AS8050

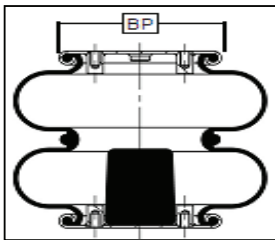

Rolling Lobe

- 1) Measure the diameter of the bead plate - dimension A
- 2) Measure the diameter of the molded rubber bellows - dimension B
- 3) Measure the height of the molded bellows - dimension C

The numbers in the lower right corner of the dimension area are those dimensions
A = 11" B = 10.5" C = 16"

Rolling lobe air springs consist of rubber bellows, top plate, piston and optional internal bumper. The bellows have a certain molded diameter that differs from the operational diameter. The operational diameter increases with increasing internal pressure until specified maximum operational pressure and therefore maximum operational diameter is reached. To assure that the bellows roll uniformly over the piston a minimum working pressure is required. Rolling lobe air springs provide the maximum ride comfort and therefore are the most popular air spring design for commercial vehicle suspensions.

Part # AS6910

Double Convoluted

The number in the lower right corner of the dimension area is FD-200

- 1) The first part (FD) is the number of bellows
 FS = Single Convoluted
 FD = Double Convoluted
 FT = Triple Convoluted
- 2) The second part (200) is the dimension of the bead plate
 200 = 6.3"
 330 = 9"
 530 = 11"

FD 200-19

This is a Double Convoluted spring (FD) with a 6.3" Bead Plate (200)

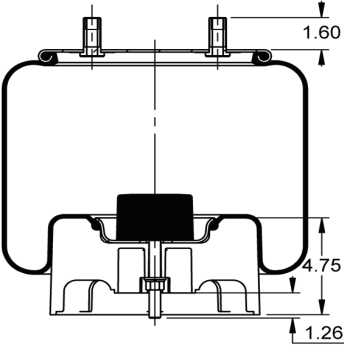

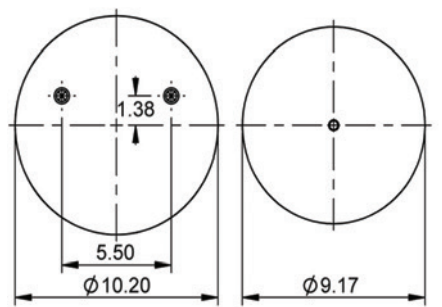

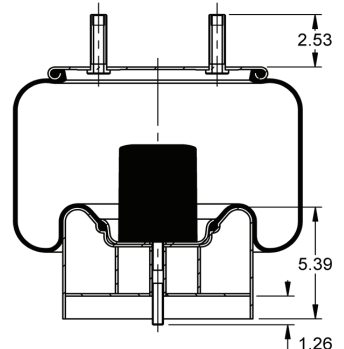

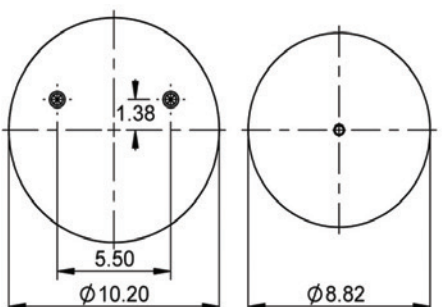

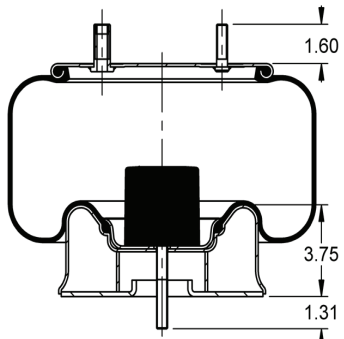

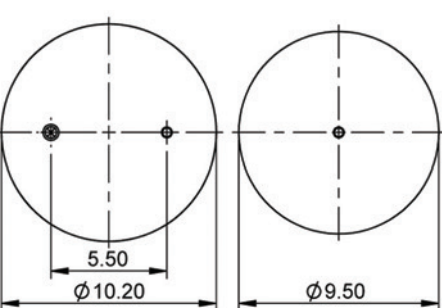

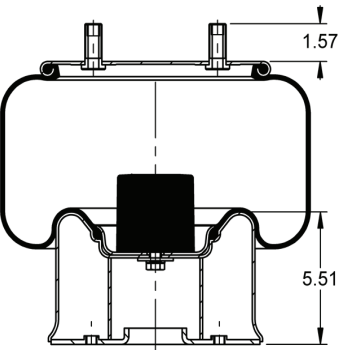

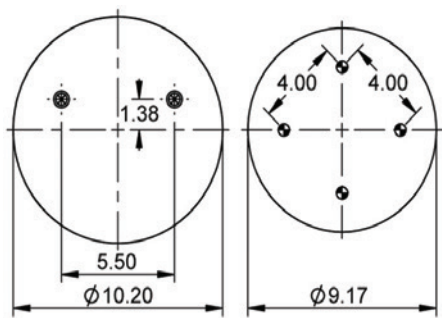

Convoluted air springs consist of rubber bellows, top and bottom plate and optional internal bumper. There are bellows with 1, 2 and 3 convolutions. Most common for commercial vehicle applications are 2- and 3-convoluted bellows. The convoluted bellows are commonly used for applications with low working pressure, off-set mounting and large operational angles as required for lift and auxiliary axle suspensions. Convoluted air springs are also widely used for industrial applications as air actuators (pneumatic systems) or as vibration isolators (machine mounting).

- 3) Height of the molded bellows = C

Refer to the size chart opposite
AS8050 Dimensions are A = 11" B = 10.5" C = 16"

Part # AS6910

Convolved --->

- 1) The first part (FD) is the number of bellows
 FS = Single Convolved
 FD = Double Convolved
 FT = Triple Convolved
- 2) The second part (200) is the diameter of the bead plate
 200 = 6.3"
 330 = 9"
 530 = 11"

AS6910 is a Double Convolved spring (FD)
with a 6.3" Bead Plate (200)

TRAILER CABLE WIRE

General-purpose primary wires covered in a high quality, PVC jacket. Especially designed for reliability as an integral part of the brake and safety system. Heavy-duty compact cable protects insulated conductors against weathering, chemicals, and abrasion. Color-coded conductors enable easy identification.

Voltage: Rated at 60 Volts or less

Temperature: Rated -67°F to 176°F

Specifications: Inner wires meet SAE J1128
