

V6600 Flat Bed System

SNAPPIN TURTLE

What does every customer want? To do it easier! The best idea's are usually very simple and might make you say...why didn't I think of that?

As it turns out Snappin Turtle HAS thought of that, at least when it comes to securing your car to your trailer....

Check out their new Wheel Bonnet systems

There are three basic types to choose from, and all of the systems will secure your car by 8 points...2 per wheel!

The V6400 Low Clearance System

For cars that have been lowered, or for a stock vehicle that just doesn't have the clearance to use a typical 4 point tie down system.

The V6600 Flat Bed System

For open trailers or multi car trailers. This system uses two side mounted ratchets per wheel, and secures to the side rail on the trailer.

The V8125 E-Track System

This is a full "basket style" bonnet system that is fully adjustable to almost all tire sizes. This system is also available in a D-Ring style system, with 2 d-rings per tire.

No one likes to lie on their back and crawl under the car to tie

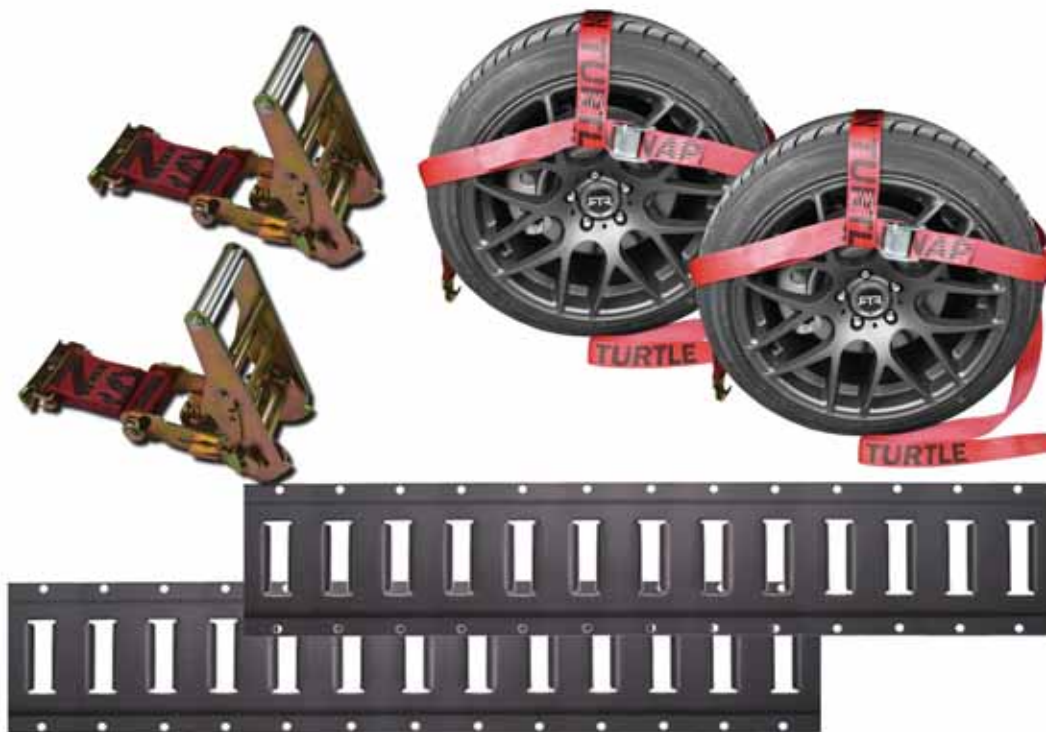

V6400 Low Clearance System

it down... all of these tie down systems eliminate that part of the job. Their systems are all very versatile, and are available in several variations to best fit the type of car your customer is transporting. All of these systems are easy for your customer to install if they choose to, but they can also provide a great source of additional revenue for the shop side of your business; weather it's an upgrade to a new trailer sale, or service to an existing trailer. You can adapt all of these systems to just about any type of trailer, and if you have any questions, the techs at Snappin Turtle can put you in the right direction.

Snappin Turtle was founded in Carlisle, PA in 1983 to serve the automotive enthusiast. The famous Carlisle Fairgrounds, home of 10 world class collector car, truck and motorcycle shows each year, provided an opportunity to meet and develop products for some of the most dedicated vehicle collectors in the country. They have 30 years of experience manufacturing the best and most task specific tie down products, and we are constantly adding new designs and refining their existing line.

Snappin Turtle's commitment to quality starts with the use of 12,000 lb. 2" wide super soft webbing for our 10,000 lb. products, and an 11,000 lb. ratchet. When you buy an assembly rated for 10,000 lbs, you can be sure it's properly rated at 10K!

Tying down your bike, quad, or a pit cart that rides next to your race car in the trailer? Our 1" wide webbing products are made with an unbelievably strong 6,000 lb. rated webbing. This super strong rated webbing adds years of life to our tie downs when compared to our competitors. Even the thread used in all our products is sized up for extra durability.

V8125 E-Track system

When looking for a safe, secure way to tie down your vehicle, trust Snappin Turtle Tie Downs.
