

# Classic Style Current Technology

Up to 1000hp

The Speedmaster Individual throttle body EFI systems have all the flash of classic Weber induction but provide a higher state of tune and the engine performance versatility of EFI.

# SEMA Show Award Winner

We were honoured to receive the prestigious SEMA 'Global Media Award' for our Down Draft ITB Manifolds.

The Speedmaster™ research and development team are consistently pushing the boundaries with a main objective "to improve the end user experience". We pride ourselves on winning 8 SEMA Global Media Awards in 7 years.

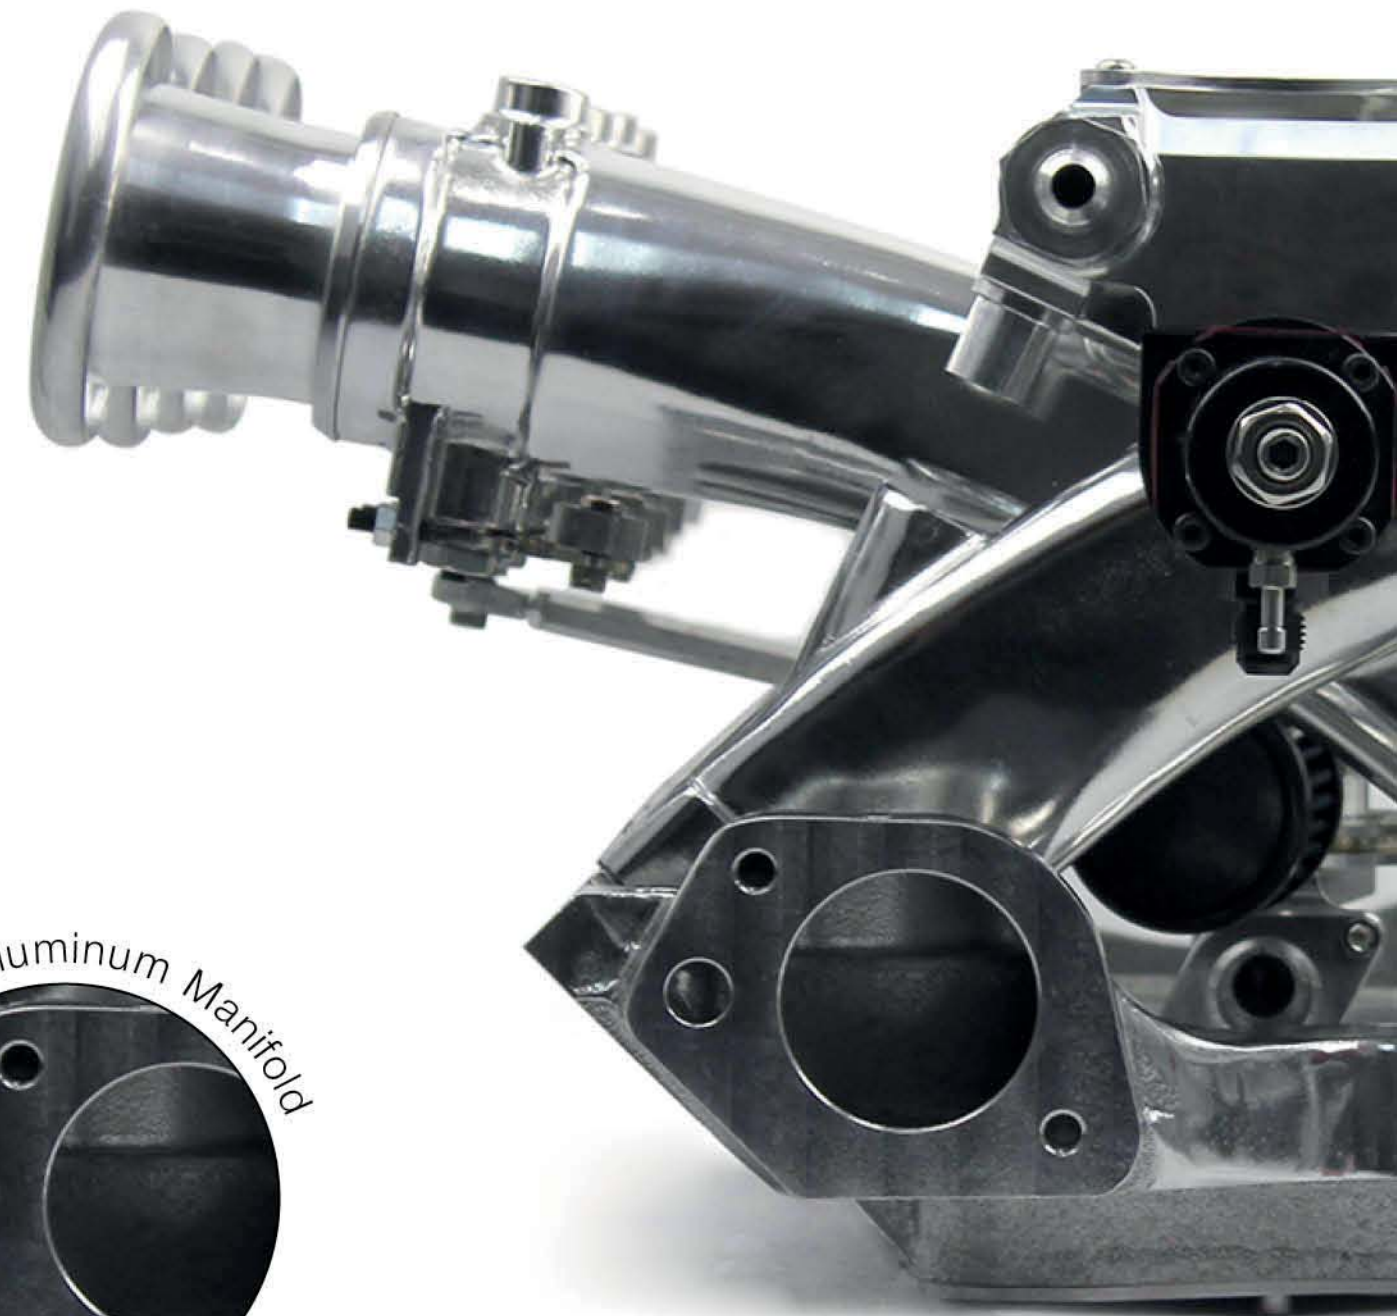

The World's Largest Automotive Specialty Products Trade Event

# EFI Performance

## Built to Last

Delivering crisp EFI performance with systems capable of supporting up to 1000 hp, Speedmaster throttle bodies are CNC machined and manufactured from Heat treated 601 Cast aluminum, so they are built to last.

Increased Fuel Volume

Total Fuel Control

CNC Machined

# Black/ Polished Finish Available

---

Our ITBs are available in a variety of styles and shapes, including side draft and down draft models to fit your taste and application. DNA ITBs come in Speedmaster black or a machine polished finish.

# Precision

Superior idle characteristics and astounding throttle response, improving emissions and economy through tight air/fuel ratio control.

## IDA Style Throttle Bodies

# Linkage Kit

Includes throttle stops, idle controls, lever arms and joiner/balancer all in one. It also features a single screw adjustment for calibrating front to rear throttle shafts.

# Full Throttle Geometry

**Brand:**Speedmaster  
**Part Number:** 1-148-002  
**Part Type:**Intake Manifolds, Fuel Injected

**Engine Block Style:**LS3  
**Injection Style:**8 Throttle body  
**Basic Operating RPM Range:**Idle-7,000  
**Intake Trumpets:**Intake Trumpets Included  
**EGR:** No  
**Injectors Included:** No  
**Fuel Rails Included:** Yes  
**Throttle Body Included:** 8 Pieces  
**Base Material:** Aluminum Casting  
**Base Finish:** Polished  
**Assembled:** Comes Non-Assembled  
**Quantity:**Sold as a Kit  
**Notes:**Check Application Before Bidding

Speedmaster linkage set incorporates the throttle stops, idle controls, lever arms and joiner/balancer all in one. It also features a single screw adjustment for calibrating front to rear throttle shafts.

The bell crank has a fully indexable eccentric cable pulley that enables good slow speed drivability and still attain full throttle geometry.

Speedmaster throttle bodies have the following feature:

- CNC machined, Heat treated 601 Cast aluminum.
- Butterflies are measured for each bore & precision machined to a closer tolerance.
- Butterflies are secured to centerless ground brass shafts with split screws to ensure reliability and serviceability.
- O-ring seals on lower mounting faces.

The Speedmaster Individual throttle body EFI system have all the flash of classic Weber induction but provide higher state of tune and engine performance versatility of EFI. Delivering crisp EFI performance with systems capable of supporting up to 1000 hp. Fuel and air is delivered through precision cast aluminum 50mm IDA style throttle bodies that allow for superior idle characteristics and astounding throttle response while improving emissions and economy through tight air/fuel ratio control.
