Sprint Booster is an electronic device which attaches to your accelerator pedal connector. The installation is an easy process and does not affect the electronic systems of your car (injection, ABS, etc). With Sprint Booster, the delayed response of the electronic throttle will be dramatically reduced and acceleration will improve greatly.

# NOW AVAILABLE WITH **ADJUSTABLE FEATURE** STOCK • **STAGE 1** • **STAGE 2**

**“SPRINT BOOSTER MADE THE DRIVER INPUT TO THE THROTTLE APPROXIMATELY HALF A SECOND TO 1 SECOND QUICKER, ESSENTIALLY MAKING THE INSTANT ACCELERATION FEEL LIKE A LIGHTNING QUICK CABLE TO THROTTLE BODY SYSTEM....”** - MARK PEREIRA / EDITOR IN CHIEF / PERFORMANCE AUTO AND SOUND MAGAZINE

Most cars in the 21st century have replaced the more conventional throttle cable for an ECM (Electronic Control Module) that translates how hard the pedal is pushed into electronic signals in order to provide power to the wheels.

The ETC (Electronic Throttle Control), which is also known as Drive-By-Wire, has the unfortunate downside of delayed response and subdued acceleration, which can create problems in certain situations such as up-hill starts, quick gearchanges and overtaking.

**SPRINTBOOSTER OVERCOMES THIS DELAY IN THROTTLE RESPONSE BY PROVIDING CRISP, ON-TAP ACCELERATION WHENEVER THE DRIVER DEMANDS IT.**

**INSTALL IN MINUTES  
PERFORMANCE IN SECONDS**

**RESPONSE TIME IS  
DRAMATICALLY IMPROVED**

**EASIER STARTS ON HILLS  
MORE CONFIDENT PASSING**

**A MORE SATISFYING  
DRIVING EXPERIENCE**

EC Type-approval: e24031712

**“AS A RESULT, YOUR CAR FEELS FASTER, REACTS FASTER AND DRIVES FASTER. THIS PRODUCT IS ENGINEERED TO ENHANCE THE DRIVING EXPERIENCE...”**

- MARK PEREIRA / EDITOR IN CHIEF / PERFORMANCE AUTO AND SOUND MAGAZINE

**W**ith any high performance vehicle comes equally high expectations. When you put the pedal to the metal, nothing beats the roaring sound and feeling of instant acceleration. Recently, we've heard a lot about a new product designed specifically to enhance acceleration in a number of popular platforms named Sprint Booster.

The Sprint Booster is an aftermarket electronic module that plugs in between the accelerator pedal and the engine control unit (ECU) in vehicles equipped with an electronic throttle control. Sprint Booster is an application-specific hardware based product designed specifically for your car. This device is engineered to improve acceleration on drive-by-wire cars by continuously measuring and converting the digital signal providing the ECM (Electronic Control Module) with a new and altered signal. Many modern vehicles utilize electronic throttle control and more vehicles are going that way, especially performance and sports cars.

In conventional throttle systems, the accelerator pedal is connected to the throttle by a cable. In electronic throttle control systems, the accelerator pedal is connected to a sensor that sends a signal to the ECU that operates the throttle. The ECU increases or decreases throttle effort based on your accelerator pedal input, however this doesn't always translate to instant response. Things like pedal sensitivity, stability control and traction control systems can vary on different vehicles and can also lead to larger 'lag' in throttle response and acceleration when its go-time. Although some cars are equipped with adaptive driving technology (which adapts to your driving style based on recent pedal use), the Sprint Booster claims to further improve response, increase pedal input sensitivity and deliver more impressive off the line performance.

But even after I had read up on Sprint Booster online and looked into how it all worked, I still remained somewhat skeptical of what difference it really could make to most vehicles. That was until a recent visit to JRP, who are now the North American distributor for Sprint Booster. During a routine stop at JRP to pick up a few of the regular goodies for an upcoming track day (and deliver my usual monthly exchange of friendly trash talk), the boys behind the counter had a little gift for me. The expert staff set aside

a Sprint Booster application for my Nissan 350Z and promptly challenged me to give 'er a try in my own personal ride for a few days. Known to never turn down a challenge and being very curious of the Sprint Booster claims, it was just a matter of minutes before we were in the JRP parking lot snapping the Sprint Booster into place between the gas pedal and ECU in my STS turbocharged 350Z.

**ON THE ROAD**

The installation takes literally just 5-10 minutes depending on how long you have to dig around near your foot pedals to find the proper connections. Then you simply plug in the Sprint Booster between the accelerator pedal module and the harness and you're ready to go! Your car can be restored to stock just as easily. Luckily, the JRP team took under 5 minutes to plug in the unit as they're experienced staff have already tested and tried Sprint Booster on dozens of makes and models, as the application list reads longer than your number of friends on Facebook.

EC Type-approval: e24031712

RESPONSE  
TO YOUR COMMAND!**

at highway speeds. To ensure my 'butt-dyno' wasn't playing tricks on me, I clipped the Sprint Booster in and out multiple times to clearly feel the amazing responsiveness and overall it made my 350Z a blast to drive. You wouldn't think a Nissan 350Z suffers from any throttle lag, but once this product is in place it makes a huge difference in the overall driving dynamic and feels electrified with its new aggressive pedal feel. It takes a little getting used to at first, but as soon as I step on the accelerator, it goes without hesitation.

While the car itself doesn't gain any horsepower from installing Sprint Booster, it does have the potential to make your ride much faster in 1/4 mile times. In theory, if two identical 350Zs were to race each other, the one with

Sprint Booster would be much faster due to the super quick reaction time this product delivers. If you were to hit the gas pedal at the exact same time in both cars, the one with Sprint Booster would get up to speed faster. Sprint Booster changes the throttle response in the low to mid rpm range where cars spend a majority of time. As a result, your car feels faster, reacts faster and drives faster. This product is engineered to enhance the driving experience by providing increased acceleration time (eliminating delay) between the drive by wire throttle pedal to the actual electronic throttle body. In our case, Sprint Booster made the driver input to the throttle approximately half

a second to 1 second quicker, essentially making the instant acceleration feel like a lightning

quick cable to throttle body system. On vehicles equipped with the cable to throttle set up you could simply tighten the cable to eliminate any slack and create faster throttle response, think of Sprint Booster as the high-tech electronic equivalent. The best way to describe the feeling is to think of any vehicle you may have driven equipped with an aggressive 'sport' more option, that is the type of rapid sensation Sprint Booster provides. This product does not alter fuel or ignition in your vehicle, it's a simple plug-n-play mod that delivers instant response throughout the power band, making accelerating and rev matching incredibly more fun!
