MASS AIR FLOW SENSOR INSTALLATION GUIDE Please refer to the vehicle service manual for detailed instructions.

REMOVAL:

- 1. Disconnect the battery ground cable.
- 2. Remove air filter and replace as necessary. For oiled air filters, thoroughly clean re-usable filter with minimal oil to prevent sensor contamination.
- **3.** Unplug MAF sensor connector. Ensure the weather seal is retained on the connector.
- 4. Remove sensor and save hardware for re-use.

INSTALLATION:

- 1. Clean mounting surfaces.
- 2. Install new quality air filter or thoroughly clean an existing reusable one.
- 3. Remove protective cover(s).
- 4. Replace sensor and tighten retained hardware per service manual. DO NOT OVER TIGHTEN.
- Push the connector back on ensuring good electrical connection.
- 6. Reconnect the battery cable.
- 7. Clear any Diagnostic Trouble Codes (DTC's) stored in the PCM and reset any learned fuel trim values.
