

STILLEN 370Z Generation 3 Ultra Long Intake Released!

STILLEN is excited to release the newest [Gen 3 Intake System](#), extending the application list to include the 2009 370Z (Part #402852). This highly anticipated intake utilizes the principles proven with the G37 3.7L system, creating horsepower gains of **+17.5 at the wheels**.

STILLEN 370Z Generation 3 Ultra Long Intake

The 370Z Generation 3 Ultra long intake features a proprietary intake design devised to maximize horsepower from the VQ37 engine.

As with all of the [Gen 3 Intakes](#), these pass beyond the stock airbox location, and reside just in front of the radiator, allowing for cool air provided from the front grille, avoiding the troublesome location of at ground level, where asphalt temperatures can dramatically increase the intake air temp, and hydrolocking is most common. Slight enlargement of the factory core support is necessary to accommodate the pipes, which is achieved easily with a dremel or other cutting tool.

When it comes to quality performance air intake systems, Stillen is the brand you can depend on.
