

STILLEN Dealer Profile: Holman Infiniti X STILLEN Q50S AWD

The Holman Group is at it again! Knowing what the customer wants and working with the right companies to showcase what can be done is what [Holman Infiniti](#) does well. Kevin Shaw in the Parts Department looked at the Iridium Blue Q50S V37 AWD that was sitting on the showroom floor and saw the opportunity to do something eye catching.

The amber turn signals really stand out against the red lenses.

Holman Infiniti has used STILLEN products on several of its previous showroom queens, making the body styling decisions for this Q50S quite easy. Kevin started with a [Sport Front Bumper Splitter \(KB11225\)](#), and [Rear Valance Diffuser \(KB11222MB\)](#) followed by an Infiniti Sport Exhaust. Then, to make it really stand out from the rest, he ordered up and installed the first known set of JDM Q50 taillights in the USA. The dark red lenses with the amber turn signals stand out from the typical USDM Q50 variants.

The following images show the difference between the USDM factory taillights (bright red plastic with red turn signal) versus the JDM taillights (darker red plastic with amber turn signal).

The US Domestic Market (USDM) Q50 V37 taillights are red on red, including the turn signal.

The Japanese Domestic Market (JDM) Q50 taillights feature an amber colored turn signal.

Rely on premium body kits & ground effects by Stillen if you're looking for quality and efficiency.
