TOOL LIST	
Depends On Installation	
Diagonal Cut Pliers, Masking Tape, Phillips Screwdriver, Black Spray Paint (Satin Or Flat), Snap Ring Pliers, (Will Aid When Installing Clips) Sand Paper 220 Grit.	

Installing The Speed Grille Inserts

1. The black X background does not have to be removed. We do recommend doing this for professional installation.
2. Mask off the surrounding area around the center body colored bar in the grille. Sand lightly and paint black.
3. Install the center Speed Grille by placing the bottom in first and slightly pinching the top down while pushing in from the backside. If installing the Speed Grille with the X background removed. Use the 71098 installation clips (Narrow opening). If installing the Speed Grille insert with the X background still present use the 71096 clips (Wide Opening). Attack grille using six clips across the top and five across the bottom making sure to use the correct attaching clip. When not removing the X background it will be necessary to cut a notch in the bottom side of the horizontal flange in the X background where the clips attach this can be done using a pair of side cut pliers.
4. Install the side grilles in the same manner as the center grille. Use four clips per grille.
5. Install the Speed Grille emblem on the center grille face. Remove the protective cover.
