

# **Tailgate Application Aid**

This sheet is to help eliminate any confusion about which gate the retail customer needs to order due to overlapping styles of OEM trucks at model change-over. Measure the *factory tailgate* at points A, B and C to confirm the proper fit for the customer's truck.

Point A is across the outside width of the gate, 2" down from the top, just under any molding or contour built into the OEM tailgate. Point B is across the gate at the very bottom. Point C is the height of the gate (measure height of gate on end of gate not center).

<sup>\*</sup> Please note the A, B and C dimensions are the same on the VGM-07-XXX and VGM-14-XXX gates. The difference is the contour. The VGM-07-XXX gates have a smooth curved contour from bottom to top along the C dimension, the VGM-14-XXX gates have a fin toward the top of the gate to match the 2014/2015 factory gates.
